PART V	BID ITEMS

COORDINATION OF WORK WITH OTHERS

Be advised the Department has issued a permit for work on the Department's right of way within the limits of this project. The Engineer will coordinate the work of the Contractor and the Permittee.

The Department anticipates the Permittee's utility work within the US 27 paving areas will be completed before a work order is issued for this project. However, do not perform any milling or paving work within the project until the Engineer advises that the Permittee has in fact completed all work that may affect the Contractor's paving work.

The Engineer will not grant any extension of contract time or consider any claims due to delays to the Contractor's work caused by the Permittee's operations unless the Permittee's work causes a delay to the Contractor's operations so near the time of the specified completion date of this project that the Contractor will require more time, as determined by the Engineer, to reasonably complete the work. In such instance, the Engineer may extend the Contract time by as much as the anticipated number of working days and/or grant an extension of the specified completion date as determined by the Engineer to be reasonably necessary for the Contractor to complete the work.
