Question   What coordinate system should I select if I am creating a job that will have an arbitrary 10000N, 5000E coordinate system?

Answer   If you intend on creating an arbitrary coordinate system such as one with an origin of 10000 North, 5000 East, 100 Elevation via a site calibration, it is recommended to select the **No projection / no datum** choice in the **Select coordinate system** window when you are creating a job.
