TRAFFIC OPERATIONS MEMO 01-10

TO: Chief District Engineers

ATTENTION: District Branch Managers

FROM: Jeff Wolfe, P. E.
Director
Division of Traffic Operations 

DATE: February 4, 2010

SUBJECT: Revised Raised Pavement Marker System

The Kentucky Transportation Center (KTC) recently finished a research study regarding the effectiveness of raised pavement markers on Kentucky's highways. Their study examined whether these devices significantly reduced crash rates. The results of this study concluded that raised pavement markers did not provide any significant safety advantage on roadways where they were installed.

Based on this research, the Cabinet has taken the position that raised pavement markers shall only be used for positional guidance and would be primarily beneficial on multi-lane highways. As a result, the decision has been made to remove most two-lane highways from the Raised Pavement Marker System.

Attached is the revised Raised Pavement Marker System which lists roadways eligible for raised pavement marker installation and maintenance. The system is composed of: Interstates, Parkways, three-lane and five-lane highways with a two-way left-turn lane, and multi-lane highways on the old Raised Pavement Marker System. As was the case in the past, any highway with a continuous, two-way left-turn lane shall be eligible for raised pavement markers whether it is listed on Raised Pavement Marker System or not.

Should there be any questions regarding this change in policy, please contact Tim Tharpe of this Division.
