System Admin \ Maintain Product Users

Maintain Product Users Window Description

The access privilege for the Review Sample work queue is based on whether a user has the privilege to access records for a Product Group.

The Maintain Product Users window is used to determine access to the Review Sample records for a Product Group to existing SiteManager users. Before a user can access a lab Review Sample work queue, the system administrator must assign the user to the corresponding Product Group using this window.

The Maintain Product Users window displays all the product groups under the Product Group list. The list of users in the Available Users pane comes from the SiteManager security users.

To add users to a product group, select the users from the available users list and click on the ADD USERS button. To remove any users associated to a product group, select them from the Product Users list and click the REMOVE USERS button.

Procedure

System Administrator assigns specific users to product groups. The users will be based upon the type of materials that they approve samples for.

Field Table

Field Name	KYTC Population Policy & Procedure
Product Group ID	Identifies the product group ID value stored in the product group code table. (U: LMSPRDGR)
