## Princ eton SUA

## Draft Project Sheets: Five-Leg Intersection Improvements

This proposed project includes reconfiguration of the existing 5-leg intersection at KY 91 (Hopkinsville Road), East Ma in Street, and East Washington Street. The current configuration includesa stop control for the northbound Wa shington Street approach and yield and waming signage for other a pproaches. The KY 91-1 (Ma in Street), KY 91 (Ha wthome Street), and local East Ma in Street a pproaches operate a sone-way streets; other approaches camy two-way traffic. Ea gle Street and KY 2080 (Cadiz Street) intersections with KY 91 both lie within 400 feet of the 5-leg intersection. Two of the three approachesstudied exhibit above average crash rates.

| Limits | KY 91 MP 11.640-11.770 <br> KY 91-1 MP 11.710-11.760 <br> Length = 1.8 miles |

Proposed improvements shown on next page

## Princeton SUA

## Draft Project Sheets:

## Five-Leg Intersection Improvements (continued)

Option 1 would realign KY 91 (Hopkinsville Road) to tie into East Ma in Street at Eagle Street, one block to the east. The existing five-leg intersection becomes a standard four-leg intersection. The KY 91/Eagle Street intersection would be configured as a standard four-leg intersection and should be evaluated to determine if traffic volumes warrant signalization. Under this option, KY 91 traffic would be routed along two streets that are curently local roadways - along North Eagle Street from Main to Market Streets and a long East Market Street from Eagle to Hawthome Streets.

Option 2 minimizes costs and impacts but eliminates the connection between Washington Street and Hawthome, which loc al drivers reportedly use to a void downtown streets. In Option 2, Wa shington Street would terminate at a cul-de-sac south of the existing 5-leg intersection. Access to these properties would be reta ined through KY 139 (South J efferson Street).

- The local portion of East Main Street (east of the intersection) would terminate east of the existing 5-leg intersection. Access to properties on this portion of East Main Street would be retained through Eagle Street.
- A raised median island would be added within the current intersection to betterchannelize traffic flows.
- The northem approach, KY 91 (Hawthome Street), would be reduced to a single lane of travel to reduce confusion and provide space for a sidewalk. The roadway would continue to operate as a one-way link.
- Sidewalks and cross-walks would be added to facilitate pedestrian movements.

This configuration reduces the number of conflict points at the intersection. Left tums from the southbound KY 91-1 (East Main Street) approach would have to yield to northbound KY 91 through traffic.

## Princeton SUA

## Draft Project Sheets:

## Truck Route Improvements

Due to the low railroad overpassesalong KY 139 and KY 2080 that restric truck movements, the city of Princ eton has signed a detour route fortrucks. Entering the city from the east on US 62, trucks travel through a series of sharp tumsand intersections before being detoured a long local resid ential streets. As shown to the right, yellow sta rs rep resent railroad ovepasses that restrict clearances, the pink line is the signed local truck detour (which follows Green St in the north to Semina ry St to Legion St), and the orange linesare US/KY routes a pproved for truck travel that feed the local truck route. The dotted pink line is the detour proposed in the 1999 Comp Plan, although it is not marked today.

Construction of the Southeast Connector Project will provide relief for truck movements through the downtown a rea by providing an altemate route through town. Improvements identified herein are intended to serve as short term, interim spot imp rovements to address traffic flow issuesassociated with commercial vehicles
 traveling to/through the downtown area.

## Project

F

Identified as PIF 02017 D0139 3.00, this proposed project inc ludes intersection improvements at KY 293 (SJ efferson St) a nd KY 139 (Legion St). As shown, left tum lanes could be added at any of the four approaches to improve traffic flow; traffic counts will be needed to confirm which approachesmeet tum lane warrants. In the PIF, the project was cla ssified a s a high priority loc a lly a s of 2011.

## Draft Project Sheets:

## Truck Route Improvements (continued)

## Project

 MThis proposed project includes intersection improvements at Seminary a nd Green Streets to widen the curve at this location to facilitate truck tums. As shown, the proposal would improve the through-movement curve to operate at a 25 mph design speed. This improvement would require minor realignment of the Green Street approach to the west.

Project B This proposed project, identified as PIF 02 017 B0062 2.00, inc lud es intersection imp rovements at US 62 (North J efferson St) and Green Street to addresscongestion a nd safety concems at this intersection. This intersection falls within the highest CRF sp ot identified. Multiple elements are included:

- Addition of tum lanesto all four approaches
- Tuming radiusimprovements in the northem quadrant
- Reconstruction of drainage structure on eastem a pproach (shown asorange at right)

Further, consideration should be given to signa lizing this intersection in light of existing safety concems.

Project N

This proposed project, identified as \#16 in the city's 1999 Comp Plan, would redesignate US 62 a nd the truck route to follow Old Madisonville Road a nd Green Street rather than McGoodwin Avenue and J efferson Street. This rerouting a ligns the state and local portions of the truck route along Green Street, reduc ing the number of tums required fortrucks. It also redirects southbound trucks from having to make the sharp tum onto McGoodwin Avenue. This rerouting would include minor improvements at the Old Madisonville Road/Green Street intersection.

G-4

## Princeton SUA

## Draft Project Sheets:

Truck Route Improvements (continued)

This proposed project, identified as PIF 02017 B0062 3.00, inc ludes minor rea lignment of US 62 to address substandard horizontal and vertic al curves at this location. The horizontal c urve just east of KY 3114 (East Young Street) is espec ially challenging for eastbound trucks due to the close proximity of a utility pole; trucksmust veer into the oncoming traffic lane.

| Limits | Length $=0.18$ miles $(F) ;$ <br>  <br>  <br>  <br>  <br>  <br>  <br> Traffic$\quad 20.16$ miles $(W) ; 0.18$ miles $(N) ; 0.55$ miles (B) $(C)$ |

## Draft Project Sheets:

Southeast Connector

## Princeton SUA

This proposed project includesa new two lane connector highway around the eastem and southem sid es of Princeton. The project is intended to create an altemate link to help route truck traffic and cut-through traffic between interstates away from one-way streets downtown. Input from local offic ials indic atesthat providing an altemate route fortruck traffic is one of the highest prionity improvementsfor the city. Based on the development of the project concept in previous planning documents, three component projectsare included:

## Six Year Plan Item No. 2-153.00 (KY 293 to KY 91)

This 2.0-mile link is c urrently undergoing prelimina ry design efforts a nd NEPA a na lysis. The Six Year Plan includes $\$ 18.5$ million in fund ing through construction, with construction estimated to occur beginning in 2018.

## Six Year Plan Item No. 2-193.00 (KY 91 to KY 139)

This 0.8-mile link has designated $\$ 9,900$ in design funding in the Six Year Highway Plan, estimated to begin in 2014 as soon as designsfor $2-153.00$ select the final southem termini.

PIF No 02017 C0000 2.00 (KY 139 to KY 293)
This 1-mile link was identified in the PIF to improve traffic flow between KY 139 and KY 293 south of downtown. This was rated as a high priority loc ally a nd regionally as of 2013. KY 139 reportedly servescut-through traffic between I-24 and I-69, ma king it important to include this link a longside Q a nd R to route traffic a round downtown on an altemate connector route.

| Limits | New Route, 3.7 miles |
| :--- | :--- |

## Princeton SUA

## Draft Project Sheets:

## O perational Improvements at C ourthouse

This proposed project examines options to improve traffic operations at the Courthouse Square downtown. Curently, lane widths, closely spaced intersections, and on-street parking lead to high crash rates for street segments on all four sides of the courthouse. Each segment c urrently serves one-way traffic, circulating counter-clockwise a round the square.

| Limits | Length $=0.141$ miles |
| :--- | :--- |
| Traffic | 2013 Volumes shown above <br> 2040 ADT: up to 6,800 |
| Crashes | Shown above |

| Priority | Short-term Medium |
| Cost <br> Estimate | See next page |

Proposed improvement options shown on next page

View along Market Street looking east to N. J efferson St intersection, just north of c ourthouse

View along Main Street looking southeast

## Princeton SUA

## Draft Project Sheets: O perational Improvements at C ourthouse (continued)

## Two potential improvement options were considered:

Option 1 would close East C ourthouse Square and KY 139-1 (West Courthouse Square) to through traffic, making traffic divert to the next cross-street: Franklin Street to the east or Semina ry Street to the west. Inc reasing spacing between these cross-street traffic and Jefferson Street would have a positive effect on safety.

Additional parking lots a re shown east and west of the courthouse. However, these areascould be converted into green space or other usesat the city's disc retion.

Option 2A (preferred) would reta in the existing traffic flow pattems a round the courthouse but would add sidewalks and curb extensions to better define traffic movements. This option does not provide the same safety benefits as Option 1 but preserves the same traffic flow pattems downtown.

Dia gonal parking is shown a long one side of East C ourthouse Square, instead of the current configuration (i.e., a row of on-street parallel parking on each side of the street).

| Cost Estimate | $\underline{\text { Option 1 }}$ | $\underline{\text { Option 2 }}$ |
| :--- | :--- | :--- |
| Design | $\$ 100,000$ | $\$ 100,000$ |
| ROW | $\$ 150,000$ | $\$ 150,000$ |
| Utility | $\$ 100,000$ | $\$ 100,000$ |
| Construction | $\$ 1$ million | $\$ 1$ million |
| Total Cost | $\$ 1.3$ million | $\$ 1.3$ million |

## Princeton SUA

## Draft Project Sheets: <br> KY 278 Curve Realignment (Sand lick Road)

This proposed project includesminor realignment of KY 278 to improve the defic ient stopping sight distance limitation at MP 0.020-0.120. At this loc ation, KY 278 ca ries an estimated 550 vehic les per day and providestwo 8 -foot wide travel lanes with 3 -foot wide shoulders. The location is identified as a high crash spot (CRF 1.99) and lies within a high crash segment (CRF 1.07).

| Limits | KY 278 MP 0.020-0.120 <br> Length $=0.10$ miles |
| :--- | :--- |
| Traffic | 2013 ADT: 550 <br> 2040 ADT: 450 |
| Crashes | High Crash Segment (CRF 1.07) <br> High Crash Spot (CRF 1.99) |
| Geometry | Defic ient horizontal c urve <br> Defic ient Sight Dista nce |
| Environment | Homes |
| Priority | Short-term Medium |
| Cost <br> Estimate | Design $=\$ 100,000$ <br> ROW $=\$ 150,000$ <br> Utility $=\$ 200,000$ <br> Construc tion $=\$ 400,000$ <br> Total Cost $=\$ 900,000$ |

Top: Defic ient sight distance on KY 278 (looking west) Bottom: Defic ient horizontal curve (looking south)

Minor realignment of KY 278 (Sand lick Road) is recommended to correct the existing stopping sight dista nce limita tion. Although the horizontal curve at this location is also defic ient, improving it provides limited benefits as the adjacent curve at Highla nd Avenue also restricts operating speeds.

Once the Southeast Connector is constructed, the westemmost portion of KY 278 could be rerouted along the new highway to provide an improved link back to KY 91.

## Draft Project Sheets:

Southem KY 293 to US 62 Connection

## Princeton SUA

#### Abstract

The land on the west side of town south of the rail line has been identified as some of Princ eton's most developable area. The city's 1999 Comprehensive Plan identifies the area for future industrial land use. The Plan notes, "The city hastargeted this area for a substantial portion of its future growth due to planned transportation infrastructure improvements, access to the city's sewertreatment plant, access to the main waterline along KY 293, as well as the relatively flat topography of the area that is more conducive to urban development. The westem side of the city wasalso identified as the major future industrial and commercial districts bec a use of its access to [I-69] and the curent market forces that indicated a commercial and industrial growth trend on the west side of the city."

Two new highway links have been identified between KY 293 (South J efferson Street) a nd US 62 to support economic development forthisarea:

PIF No 02017 D1495 1.00 (Grooms Lane Extension, KY 293 to US 62)
This 3-mile link wasidentified in the PIF to reduce traffic congestion downtown and provide a new truck route. The proposed project would reconstruct KY 1495 (Grooms Lane) from its intersection with KY 293 and extend the route on new alignment to connect to US 62 near the westem urban boundary.

## Project

## PIF 02017 C0000 1.00 (New Route, KY 293 to US 62)

This 1.8-mile link wasidentified in the PIF as a new southwest connector route from US 62 to KY 293 to reduce congestion. This project was identified as a high prionty project for implementation prior to 2019. While ProjectJ is feasible to construct, it would likely result in more implementation challenges than Project G, such as business relocations and coordination with the railroad due to proximity to their yard.

View along KY 1495 looking east

| Limits | New Routes, 1.8-3.0 miles |
| :--- | :--- |
| Traffic | 2013 ADT: N/A <br> 2040 ADT: up to 2,400-5,200 |
| Crashes | N/A |

| Priority | Long-tem Medium |

| Cost Estimate | $\underline{\text { Project G }}$ | Project |
| :--- | :--- | :--- |
| Design | $\$ 1.0$ million | $\$ 600,000$ |
| ROW | $\$ 3.0$ million | $\$ 1.8$ million |
| Utility | $\$ 900,000$ | $\$ 800,000$ |
| Construction | $\$ 9.6$ million | $\$ 6.0$ million |
| Total Cost | $\$ 14.5$ million | $\$ 9.2$ million |

## Draft Project Sheets: <br> Widen KY 91

The proposed projects are for regional widening and improvements to KY 91. The need to widen KY 91 was identified in the 2013 PADD Comprehensive Economic Development Strategy (CEDS) and the middle section, Project E, wasalso identified in a KYTC PIF. It should be noted that the majority of this project falls beyond the boundaries of the Princeton SUA study area.
Project
S Identified in the CEDS, this project includes major widening and rec onstruction of KY 91 from Christian County to Fredonia. The project is intended to support the PADD goal to "promote the efficient and economical movement of people and goods into and through the Pennyrile Area Development District by linking population centers with accessible transportation facilities." Although specific project limits a re not defined in the CEDS plan, this project has been divided into two sections for planning purposes:

- Project S1: Christian County line to the Southeast Connector (a pproximate MP 0.0-10.7)
- Project S2: From end of Project E (MP 13.905) to MP 23.3 in Fredonia.

Identified as PIF 02017 D0091 4.00, this project includes widening of KY 91 from I-69 to KY 139 (Fa mersville Road). The project is intended to provide bettertraffic flow and reduce congestion. It should be noted that tum lanes to the Caldwell County school complex were added 3-4 years a go to help address crash issues.

## Draft Project Sheets: <br> Widen KY 139

The proposed project includes regional widening and improvements to KY 139. (It should be noted that the majority of this project falls beyond the boundaries of the Princeton SUA study area.) According to local stakeholders, KY 139 serves as a cut-through route between I-69 a nd I-24, sa ving a pproximately 14 miles compared to following the interstate routes towards Eddyville.

Identified in the PADD Comprehensive Economic Development Strategy, this project includes major widening and reconstruction of KY 139 from Cadiz to Princeton. The project is intended to support the PADD goal to "promote the efficient and economical movement of people and goods into and through the Pennyrile Area Development District by linking population centers with ac cessible transporta tion facilities."

It should be noted that one Six Year Plan project falls within the limits of Project U , although it lies beyond the study a rea for the Princeton SUA study. The plan identifies Item $02-141.00$ as the "rec onstruction of substa ndard curves at Rock Springs Hill" (MP 7.573 to 8.173 ) with $\$ 4$ million of SP funding for future project development phases through construction in 2017.

| Limits | Approx. MP 17.9-24.6 (Trigg) <br> +MP 0.0-6.1 (Ca ldwell) <br> Total Length $=12.8$ miles |
| :--- | :--- |
| Traffic | 2013 ADT: 1,500-2,600 <br> 2040 ADT: Not a nalyzed for U |
| Crashes | Not a nalyzed for U <br> (beyond project area) |
| Geometry | Not a na lyzed for U <br> (beyond project a rea) |
| Environment | Not a na lyzed for U <br> (beyond project area) |
| Priority | Long-term Medium |
| Cost | Design $=\$ 1.5$ million <br> ROW $=\$ 5.0$ million <br> Utility $=\$ 500,000$ <br> Construction $=\$ 15.3$ million <br> Total Cost $=\$ 22.3$ million |

## Princeton SUA

## Draft Project Sheets: <br> US 62/ Plum Street Intersection Improvements

This proposed project includes reconfiguration of the existing 5-leg intersection at US 62 (Ma in Street) a nd Plum Street. At this loc ation, the two-way portion of US 62 (W Main Street) intersects with one-wa y pairs of Ma in and Market Streets; Plum Street runs north a nd south at the same location. Unrestricted driveway a c ess to a local business immedia tely east of the intersection further complic a testraffic flows. Both Plum Street approachesa re stop-controlled.

| Limits | US 62 approx. MP 6.6-6.7 <br> Length $=0.1$ miles |
| :--- | :--- |
| Traffic | 2013 ADT: 13,100 (US 62) <br> 2040 ADT: up to 13,900 (US 62) |
| Crashes | High Crash Segment (CRF 1.06) |
| Geometry | Non-standard configuration |
| Environment | NRHP District, ha zmats |
| Priority | Short-tem Low |
| Cost <br> Estimate | Design $=\$ 100,000$ <br> ROW $=\$ 400,000$ <br> Utility $=\$ 300,000$ <br> Construc tion $=\$ 400,000$ <br> Total Cost $=\$ 1.2$ million |

The proposed improvement would add curbsand striping to clarify individual traffic movements.
o A raised median island is shown to help channelize traffic flows a long US 62 to/from West Ma in Street.

- A raised divider is shown to define driveway access for the business located immedia tely east of the intersection.
o A raised median island is shown to help channelize westbound traffic flows coming from US 62-1 (East Ma rket Street).
o Clearly defined striping and stop signsare shown to clarify movements to/from Plum Street to the north and south.

## Draft Project Sheets: Northside Connector

## Princ eton SUA

This proposed project includes a new two lane connector highway around the northem side of Princeton. The project is intended to create an altemate link between KY 293 and US 62 west of town. Based on the development of the project concept in the city's 1999 Comprehensive Plan, three component projects are included:

Project
M
Comp Plan Project \#15 (Bec kner Lane Extension, KY 293 to KY 91)
This 1.9-mile link stretc hesfrom KY 293 MP 8.356 at Eureka Road to KY 91 MP 13.379 at Beckner Lane. This project was rated a low priority for implementation in the Comp Plan.

Project
Comp Plan Project\#7 (Old Fredonia Road School Connector, KY 91 to Old Fredonia Road)
This 1.7-mile link stretc hes from KY 91 MP 13.379 to Old Fredonia Road. This project was rated a low priority for implementation in the Comp Plan.

Project P

Comp Plan Project \#21 (Old Fredonia Road to US 62)
This 1.3-mile link from Old Fredonia Road to US 62 at the west edge of town was rated a medium prionity in the Comp Plan. The project originally included a new interchange along the Wendell H. Ford Westem Kentucky Parkway, prior to its designation as an interstate route. The Comp Plan notes that this portion of the Northside Connector would "provide a good deal of traffic congestion relief along Eddyville Road (US 62 West) for north, northwest, and eastbound traffic. It will greatly reduce through vehicle and truck traffic along the presently congested US 62 commercial coridor." It should be noted that a new interchange at this location does not satisfy interchange spacing recommendationsfor interstates (i.e., 3 miles in rural areas).

| Limits | New Route, 4.9 miles |
| :--- | :--- |
| Traffic | 2013 ADT: N/A <br> 2040 ADT: up to 500-2,500 |
| Crashes | N/A |
| Geometry | N/A |
| Environment | Schools, Forests, Terra in |
| Priority | Long-term Low |

| Cost Estimate | $\underline{\text { Project } M}$ | $\underline{\text { Project }}$ | $\underline{\text { Project } P}$ | $\underline{\text { Total }}$ |
| :--- | :--- | :--- | :--- | :--- |
| Design | $\$ 600,000$ | $\$ 500,000$ | $\$ 1.9$ million | $\$ 3.0$ million |
| ROW | $\$ 2.0$ million | $\$ 2.0$ million | $\$ 1.5$ million | $\$ 5.5$ million |
| Utility | $\$ 1.0$ million | $\$ 1.0$ million | $\$ 1.0$ million | $\$ 3.0$ million |
| Construction | $\$ 5.7$ million | $\$ 5.1$ million | $\$ 18.9$ million | $\$ 29.7$ million |
| Total Cost | $\$ 9.3$ million | $\$ 8.6$ million | $\$ 23.3$ million | $\$ 41.2$ million |

## Princeton SUA

## Draft Project Sheets: KY 2080 Rail Overpass Reconstruction

This proposed project includes reconstruction of the railroad overpass a long KY 2080 (C a diz Street), which currently has limited clearancesboth horizontally and vertic ally. The project is identified as PIF 02017 D2080 1.00, with a sta ted purpose to improve sa fety and truck access. Clearance restrictions prohibit most sta nd ard semi-truck box trailers from using the route; concrete of the overpass showsscrapesand scratchesfrom multiple vehicles.

In this location, KY 2080 providestwo 10-11 foot wide lanes with 2-foot wide stabilized shoulders to the south and curb/gutterto the north. Na rrow sidewalks for pedestria ns a re elevated above street level and separated from traffic by metal railing.

This project is recommended asa long term low priority and should be coordinated with the railroad when/if reconstruction of the struc ture is wa rranted.

Altematively, KY 2080 c ould be terminated with a cul-de-sac on eitherside, eliminating through connectivity when the struc tural condition deterioratesto an unsafe level.

| Limits | KY 2080 MP 0.240-0.340 <br> Length $=0.10$ miles |
| :--- | :--- |
| Traffic | 2013 ADT: 2,000 <br> 2040 ADT: 1,300 |

Concrete damage to the underside of the superstructure

## Princeton SUA

## Draft Project Sheets: Add Sidewa lks a long US 62

This proposed project, identified as PIF 02017 B0062 4.00, includes a ddition of sidewalks a longside US 62 at the industrial park. In this location, US 62 providestwo 12 -foot driving la nes and 10 -foot wide combination shoulders. This project was requested by a member of the public to improve safety for pedestriansand bicyclists in the area.

View along US 62 through Industrial Park, facing southwest

| Limits | MP 3.644-5.310 <br> Length $=1.67$ miles |
| :--- | :--- |
| Traffic | 2013 ADT: 4,500 <br> 2040 ADT: 4,600 |
| Crashes | No spots or segments |
| Geometry | No issues noted |
| Environment | Industrial pa rk, ha zmats |
| Priority | Long-tem Low |
| Cost <br> Estimate* | Design $=\$ 200,000$ <br> ROW $=\$ 500,000$ <br> Utility $=\$ 500,000$ <br> Construction $=\$ 1.0$ million <br> Total Cost $=\$ 2.2$ million |

[^0]
## Princeton SUA

## Other Recommendations

## Update GPS Routing Files

Coord ination with KYTC is underway to potentia lly update recommended routing pattemsthrough Princeton. Reportedly, large truckstend to follow GPS directions ratherthan on-the-ground signing in place to route them a round trouble spots like the low underpass on KY 139 (South J efferson Street). This effort will require coordination between city offic ials a nd KYTC.

## Walkability Audit

Wa ming signage a long US 62
A walkability a udit is recommended for the urban area, which is a hands-on evaluation to identify concems related to existing pedestrian safety, a c cess, comfort, and convenience. A number of govemment agencies, universities, and other groups publish resources to facilitate this effort. A few of these are identified for reference below:

- FHWA provides numerous guides for residents to create safe, walkable communities, online at http://safety.fhwa.dot.gov/ped_bike/ped_cmnity/ped_walkguide/resource3.cfm.
- The US Department of Health and Human Servic es developed a worksheet to facilitate walkability audits under their "Healthier Worksite Initia tive," online at http://www.cdc.gov/nccdphp/dnpao/hwi/downloads/walkability_audit_tool.pdf
- USEPA's Wa lkability Workbook, online at http://www.walklive.org/project/walkability-workbook/

## Access Management Principles

Throughout field reviews and development of specific improvement concepts, several locations were noted where access management princ iples could improve safety and traffic flow. The city may want to explore system-wide application of these principles. Otherwise, specific improvements should be considered as individual projects are developed at problem locations.

## Main Street Development Plan

The Main Street/Market Street comidor through town presents unique opportunities to create a safe, multimodal environment for motorists, pedestrians, and cyc lists while supporting a vibrant, downtown business community. The figure below showsthe existing layout with key milepoints, daily traffic volumes, a nd crash statistics. Although the existing traffic flow pattem operates at acceptable levelstoday, an in-depth assessment of the existing conidor and improvement opportunities would benefit the city. Improvement options should examine parking needs, pedestrian and bic ycle infrastructure, traffic operations, access management opportunities, and more to clearly define the long term vision for the downtown area.

At a conceptual level, this SUA study examined potential trade-offs along the one-way pairsection of the route. Converting to a pair of two-way streets reduces traffic capacity but would reportedly be more pedestrian friendly, conducive to economic development, a nd easier for infrequent visitors to navigate. Altematively, bike lanes could be added within the existing right-of-way if one-way operations were

## Princeton SUA

## Reqional Bicycle Plan

Coordination between the mayor and KYTC's Bike/Ped Coordinator is underway to create a City Bike/Ped Plan. The draft template, included as Appendix H, includesan overview of existing conditions, opportunities, priorities, a nd implementation steps. Preliminary concepts identified in the draft template include the following.

- A network of multi-use paths partially encircling the city, to be considered for implementation a longside future connector routes. Shown below at a conceptual level, the route would provide bicycle and pedestrian accessto a number of local parks.
- A multi-use path a longside US 62 on the west side of town (comparable to Project D recommended herein).
- A greenway/multi-use path a longside US 62 east of town, between Princeton and Dawson Springs, a distance of a pproximately 11 miles. From Dawson Springs, an earlier planning study identified a bicycle connection to the Pennyrile State Park.
- Installation of "Share the Road" signs along known recreational routesalong regional highways, i.e., KY 1495, KY 128, and KY 293.

To advance these concepts, the City should begin to generate grass-roots support from locals and property owners. Further, la nd use ordina ncesmay need to be reviewed to determine compatibility.
