Data Needs Analysis

KY 474, Carter County Bridge Replacement M.P. 5.062 to M.P. 5.102 Item No. 09-1081.0

Prepared by KYTC
District 9 Design Staff

January 2013

| II. PROJI | CT PURPOSE | AND NEED | | |
|--|------------|----------|------|-----------|
| A. Legislation | | | | |
| The following funding was listed in the 2012 | Funding | Phase | Year | Amount |
| Highway Plan | STP | D | 2012 | \$450,000 |
| | STP | R | 2012 | \$75,000 |
| | STP | U | 2012 | \$150,000 |
| | STP | С | 2012 | \$500,000 |

B. Project Status

Design funds were authorized in July, 2012. The project will be advertised to consultants.

C. System Linkage

KY 474 is classified as a Rural Local roadway and connects the communities of Poplar and Smith's Creek to KY 2 and the rest of Carter County.

D. Modal Interrelationships

N/A

E. Social Demands & Economic Development

The primary economic development in the area is a quarry at mile marker 3.2, approximately 2 miles from the project. Trucks from the quarry travel along KY 474, crossing this bridge on their way to KY 2.

F. Transportation Demand

The last traffic count near this intersection was 917 and was performed in 2010. Traffic has remained relatively constant over the past 10 years.

| II. PROJECT PURPOSE AND NEED (cont.) |
|---|
| G. Capacity |
| The current number of lanes on the bridge is sufficient for the traffic that crosses it. No additional lanes are necessary. |
| u o.c. |
| H. Safety |
| The bridge is both structurally substandard and functionally obsolete. The curb-to-curb roadway width on the structure is 20.3 ft. The bridge is currently on a 12-month inspection schedule due to transverse cracks in one of the beams that were recently installed to replace existing substandard beams. |
| |
| |
| I. Roadway Deficiencies |
| The current roadway width of 20' does not meet current design standards. The roadway width is especially problematic due to the higher volume of truck traffic that this roadway carries. |
| |
| |
| |
| |
| |
| Draft Purpose and Need Statement: |
| Need: This project is necessary due to the poor condition of the bridge, the poor geometrics of the roadway, and the |
| high volume of trucks that cross the structure daily. |

Purpose: The purpose of this project is to reconstruct the bridge and approaches to provide improved safety and

access for the residents and businesses of KY 474.

3/8/2013

| III. PRELIMINARY ENVIRONMENTAL OVERVIEW |
|---|
| A. Air Quality Project is in: Attainment area Nonattainment or Maintenance Area PM 2.5 County STIP Pg.#: Pg 17&18 of 127 FY2013- TIP Pg.#: |
| 5111 1g.m. 1g 1/0.10 01 12/112015 |
| B. Archeology/Historic Resources Known Archeological or Historic Resources are present |
| There are no known archaeology sites present within the project area. Additionally, the area appears to have been highly disturbed. Investigations will be conducted, if warranted, once an alignment has been chosen for final development. There are no NRHP listed properties within the project area. The DEA Historian has made a site visit and determined that there are no eligible properties (including the bridge) existent within the project area. |
| C. Threatened and Endangered Species |
| Indiana bat, gray bat and fanshell mussel are federally listed species that are known to occur in Carter County. The project area is within a known swarming polygon for Indiana bat. There are a few trees in the project area that will likely be impacted. Once an alignment is chosen an IB CMOA will be developed to include tree clearing restrictions and/or payment into the Indiana Bat Conservation Fund (IBCF). It is likely that an "Assumed Presence Biological Assessment" for gray bat will be written and will include strict adherence to the KYTC Standards and Specifications for erosion and sedimentation control as mitigation measures to offset impacts to any potential gray bat foraging habitat. The stream does not appear to be of a size or of a substrate type to support freshwater mussels. Therefore, a No Effect finding is anticipated for the fanshell mussel. |
| D. Hazardous Materials ✓ Potentially Contaminated Sites are present ✓ Potential Bridge or Structure Demolition |
| The bridge will need to be inspected for asbestos containing materials. It is possible that there are some mastics that were used on the structure that could contain some asbestos. However, it is not expected that these materials would warrant a full blown asbestos abatement. Division of Environmental Analysis (DEA) personnel will oversee any inspection and/or abatement of ACMs related to the demolition of the existing structure or any other structures that might require demolition as a result of the project. In addition to possible asbestos abatement that might be required for the project, there is also a gas station within the project area that will likely require a Phase II ESA to determine if there is contamination present. It appears likely that at least a strip taking might be necessary from the gas station so some drilling to determine if contamination is present and if so, the extent of it, will be completed prior to right of way acquisition. Again, DEA personnel will oversee this work. All of these investigations will be documented as part of the CE Level 1. |
| E. Permitting Check all that may apply: Waters of the US MS4 area Floodplain Impacts Navigable Waters of the US Impacts Are 401/404 Permits likely to be required? Yes No Impacts to: Wetlands Stream/Lake/Pond ACE LON ACE NW ACE IP DOW IWQC Special Use Waters |
| The existing structure crosses Smith Creek which is within the Tygarts Creek basin. It is not considered a Special Use water of the Commonwealth. It appears to have been highly disturbed, scoured, and eroded. The stream banks have been lined with grouted channel liner both upstream and downstream of the existing bridge and there are some existing gabion baskets along one side. Smith Creek is shown as a Zone A on the FEMA mapping, which indicates that no base flood elevations have been determined, but it is subject to inundation by the 1% annual flood. Unless channel relocation and/or design will be required to correct the scouring problem, it is anticipated that an ACE LON can be used for the project. |

| F. Noise | | |
|---|---------------|---|
| Are existing or planned noise sensitive receptors adjacent to the proposed proje | ct? | s 🗌 No |
| Is this considered a "Type I Project" according to the <u>KYTC Noise Analysis and Ab</u> | atement Poli | cy? ☐ Yes ☑ No |
| There are homes, apartments, businesses, and a church within the project area. | | |
| G. Socioeconomic | | |
| | ·· | Used Hoo Dien available |
| Check all that may apply: Low Income/Minority Populations affected VReloc It is unknown whether low income or minority populations reside within the pro | | ocal Land Use Plan available owever, with the |
| proximity of some of the residences and businesses, it appears that relocations of | | • |
| | | , |
| H. Section 4(f) or 6(f) Resources | _ | |
| The following are present on the project: Section 4(f) Resources | Section 6(f) | |
| There were no publicly owned parks or recreation areas observed within the project limit properties are determined to be eligible for the NRHP, then Section 4(f) would apply if an | | · |
| properties are determined to be eligible for the INTER, then section 4(1) would apply it an | y Or them are | impacted by the project. |
