## Scoping Study

KY 8, Lewis County  
From M.P. 22.450  
To M.P. 22.750  
Item No. 9-1082.00

Prepared by the KYTC  
Division of Planning and  
KYTC District 9

February 2013

I. PRELIMINARY PROJECT INFORMATION			
<b>County:</b>	Lewis	<b>Item No.:</b>	9-1082.00
<b>Route Number(s):</b>	KY 8	<b>Road Name:</b>	
<b>Program No.:</b>	86827	<b>UPN:</b>	FD 52    068    008    022-023
<b>Federal Project No.:</b>	BRO 5236 (008)	<b>Type of Work:</b>	Bridge Replacement
<b>2012 Highway Plan Project Description:</b>			
Replace bridge on KY 8 over Kinniconnick Creek 0.094 mile W of Dudley Ave (CR-1031A)(SR26.5) 068B00003N			
<b>Beginning MP:</b> 22.450		<b>Ending MP:</b> 22.750	
		<b>Project Length:</b> 0.300

II. PROJECT PURPOSE AND NEED				
<b>A. Legislation</b>				
The following funding is listed in the 2012 General Assembly's Recommended Highway Plan. The design estimate is confirmed by an early printout of the 2012 Enacted Highway Plan.	<b>Funding</b>	<b>Phase</b>	<b>Year</b>	<b>Amount</b>
	BRO	D	2013	\$650,000
	BRO	R	2015	\$150,000
	BRO	U	2015	\$150,000
	BRX	C	2017	\$3,000,000
<b>B. Project Status</b>				
Design funds for this project were authorized in August 2012. Scheduled advertisement date is February 2013.				
<b>C. System Linkage</b>				
Albeit not the only link, due to the construction of the AA Highway (KY 10) in the 1980's , this section of KY 8 within/near Garrison gives access for residents traveling east to cross the bridges at Portsmouth into Ohio. This route is classified as a Major Rural Collector.				
<b>D. Modal Interrelationships</b>				
N/A				
<b>E. Social Demands &amp; Economic Development</b>				
N/A				
<b>F. Transportation Demand</b>				
Based on findings from CTS, the last actual traffic count for this segment including the bridge is 3,238 in 2010. Traffic has declined only slightly in the last 10 years: 3,490(07), 3,510(04), 3,470(02), 3,800(98), and has never been below 3000 adt since the 1970's.				

## II. PROJECT PURPOSE AND NEED (cont.)

### G. Capacity

There are not capacity issues at this location.

### H. Safety

Collision data was obtained for a five year period from January 2008 to December 2012. There were two collisions during this time frame, none of which were fatal. The main concern for this project is the functionally obsolete bridge.

### I. Roadway Deficiencies

The current section of roadway has a rural template of 10' lanes and 2' shoulders. KYTC's Common Geometric Practices for Rural Collector Roads recommends 12' lanes and 8' shoulders. The narrow lanes, vertical clearance (due to truss structure), and ADT identify this bridge as functionally obsolete.

### Draft Purpose and Need Statement:

Need: This project is needed because the existing structure has a sufficiency rating of 26.5/100.0, which indicates that it is functionally obsolete. KYTC's policy is to consider replacement of structures when their sufficiency rating falls below 50.0/100.0.

Purpose: The primary purpose of this bridge replacement is to replace the functionally obsolete bridge and approaches on KY 8 over Kinniconnick Creek approximately 0.094 mile west of Dudley Avenue (CR-1031A) in order to improve safety to the traveling public.

<b>III. PRELIMINARY ENVIRONMENTAL OVERVIEW</b>	
<b>A. Air Quality</b> Project is in: <input checked="" type="checkbox"/> Attainment area <input type="checkbox"/> Nonattainment or Maintenance Area <input type="checkbox"/> PM 2.5 County STIP Pg. #: <span style="background-color: #cccccc; display: inline-block; width: 100px; height: 1.2em; vertical-align: middle;"></span> TIP Pg. #: <span style="background-color: #cccccc; display: inline-block; width: 100px; height: 1.2em; vertical-align: middle;"></span>	
The project does not appear in the FY2011-2014 STIP listing of federal projects. An amendment to the STIP will need to be completed.	
<b>B. Archeology/Historic Resources</b> <input type="checkbox"/> Known Archeological or Historic Resources are present  Since the existing bridge was constructed in 1930, it is potentially eligible for the National Register of Historic Places. Additionally, some buildings and homes might meet the criteria of being 50 years old or older. An assessment of the eligibility of homes, buildings and the existing structure will be required early in the Design phase of the project. All additional right of way or easement areas will require a Phase I archaeology survey once an alignment has been selected.	
<b>C. Threatened and Endangered Species</b> Indiana bat, freshwater mussels, and Virginia spirea are listed for Lewis County. Habitat for freshwater mussels and Indiana bat was observed during a site visit on March 21, 2012. Although there were some scoured areas along the banks of Kinniconnick Creek, it was undetermined whether suitable habitat is available for Virginia spirea. A biological assessment for all listed species will be required prior to construction.	
<b>D. Hazardous Materials</b> <input checked="" type="checkbox"/> Potentially Contaminated Sites are present <input checked="" type="checkbox"/> Potential Bridge or Structure Demolition One site (Garrison Auction) could potentially warrant a Phase II Site Assessment if it is determined that it was once used as a garage. Bridge will need to be inspected to determine if any asbestos containing materials are present.	
<b>E. Permitting</b> Check all that may apply: <input checked="" type="checkbox"/> Waters of the US <input type="checkbox"/> MS4 area <input type="checkbox"/> Floodplain Impacts <input checked="" type="checkbox"/> Navigable Waters of the US Impacts Are 401/404 Permits likely to be required? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No    Impacts to: <input checked="" type="checkbox"/> Wetlands <input checked="" type="checkbox"/> Stream/Lake/Pond <input type="checkbox"/> ACE LON <input checked="" type="checkbox"/> ACE NW <input type="checkbox"/> ACE IP <input type="checkbox"/> DOW IWQC <input type="checkbox"/> Special Use Waters Area surrounding Kinniconnick Creek displayed some characteristics of a bottomland hardwood wetland. Until the extent of impacts to the potential wetland and the stream are known, it is difficult to assess the expected ACE and/or KDOW permit required, but it is anticipated that at a minimum, an ACE NW #14 with a General WQC from KDOW will be needed. Additionally, because the USACE maintains the Mehldahl boat ramp at this location, it is probable that a flowage easement is maintained along Kinniconnick Creek. The stream at this point appeared to be navigable, and thus would likely require a Coast Guard Permit in addition to any USACE/KDOW Section 404/401 permits that are required.	
<b>F. Noise</b> Are existing or planned noise sensitive receptors adjacent to the proposed project? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No Is this considered a "Type I Project" according to the <a href="#">KYTC Noise Analysis and Abatement Policy?</a> <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No The scope of this bridge replacement project is not likely to warrant a noise analysis.	
<b>G. Socioeconomic</b> Check all that may apply: <input type="checkbox"/> Low Income/Minority Populations affected <input type="checkbox"/> Relocations <input type="checkbox"/> Local Land Use Plan available Unknown at this time.	
<b>H. Section 4(f) or 6(f) Resources</b> The following are present on the project: <input checked="" type="checkbox"/> Section 4(f) Resources <input type="checkbox"/> Section 6(f) Resources The existing structure is potentially eligible since it was constructed in 1930. A Programmatic Section 4(f) for Historic Bridges will be required.	
<b>Anticipated Environmental Document:</b> <span style="border: 1px solid black; padding: 2px 10px;">CE Level 1</span>	

#### IV. PROJECT SCOPING

This project is needed as the sufficiency rating indicates the bridge is functionally obsolete, making it is an unsafe structure for residents near Garrison. The current estimate is based on replacing or rehabilitation of the existing bridge in place. This does not include any approach work that may be required to design and construct the new bridge outside of the existing alignment.

Current Estimate	
Phase	Estimate
Planning	
Design	\$650,000
R/W	\$150,000
Utilites	\$150,000
Const	\$3,000,000
<b>Total</b>	<b>\$3,950,000</b>

#### V. SUMMARY

This study is to address the reconstruction / rehabilitation of a functionally obsolete bridge. The existing bridge does not meet current design standards which contributes to the low sufficiency rating and the eligibility of federal funding.
