**PROJECT AUTHORIZATION**

# PROJECT AUTHORIZATION

AUTHORIZATION NO: 863130

It is hereby ordered that the project herein described be undertaken and accomplished within the funding level authorized

| Project Id | Project Id Number | Federal Project No. | District |     | County    | 6 Yrp Item Number |
|------------|-------------------|---------------------|----------|-----|-----------|-------------------|
|            | 056 8640 01-004   | STPM 8776 029       | HWY      | ADD | JEFFERSON | 05-00481          |
|            |                   |                     | 05       |     |           |                   |

| TYPE OF PROJECT         | ROUTE NUMBER | FACILITY NAME      | SYSTEMS |
|-------------------------|--------------|--------------------|---------|
| 032 - RECONST W/ADD LNS | KY 864       | BEULAH CHURCH ROAD |         |

| PROJECT LENGTH | SCOPE OF PROJECT  |
|----------------|---|
| 1.547 MI       | KY 864 - WIDEN BEULAH CHURCH ROAD FROM 2 TO 3 LANES FROM I-265 TO CEDAR CREEK ROAD. |

- R) = RESIDENTIAL

- C) = COMMERCIAL

- I) = INDUSTRIAL

- ① TURNING LANES : 9' MINIMUM – 12' DESIRABLE; PARKING LANES : RESIDENTIAL – 7' MINIMUM – 10' DESIRABLE; COMMERCIAL & INDUSTRIAL – 9' MINIMUM – 12' DESIRABLE.
- ② TURNING LANES : 10' MINIMUM – 12' DESIRABLE; PARKING LANES : 9' MINIMUM – 12' DESIRABLE.
- ③ VERTICAL CURBS WITH HEIGHTS OF 6" OR GREATER ADJACENT TO TRAVELED WAY SHOULD BE OFFSET A MINIMUM OF 1 FOOT. WHEN A CURB AND GUTTER SECTION IS PROVIDED, THE GUTTER PAN WIDTH, NORMALLY 2 FEET, SHOULD BE USED AS THE OFFSET DISTANCE.
- ④ THE NUMBER OF LANES TO BE PROVIDED ON STREETS WITH A CURRENT ADT OF 2000 OR GREATER SHOULD BE DETERMINED BY A HIGHWAY CAPACITY ANALYSIS OF THE DESIGN TRAFFIC VOLUMES. SUCH ANALYSIS SHOULD BE MADE FOR FUTURE DESIGN TRAFFIC. (DESIRABLE)
- ⑤ THE BERM AREA IS TYPICALLY FROM FACE OF CURB TO 2 FEET BEHIND BACK OF SIDEWALK.
- ⑥ REFER TO CHAPTER 3 OF AASHTO'S "A POLICY ON GEOMETRIC DESIGN OF HIGHWAYS AND STREETS" CURRENT EDITION.
- ⑦ MINIMUM STOPPING SIGHT DISTANCES ARE BASED ON HEIGHT OF EYE 3.5 FT. & HEIGHT OF OBJECT OF 2.0 FT. BOTH HORIZONTAL & VERTICAL ALIGNMENTS CONSIDERED.
- ⑧ NORMAL PAVEMENT CROSS SLOPES ON BRIDGES SHALL BE 2 PERCENT.
- ⑨ ARTERIALS WITH LARGE NUMBERS OF TRUCKS AND OPERATING NEAR CAPACITY SHOULD CONSIDER GRADES FLATTER THAN THOSE IN RURAL SECTIONS TO AVOID UNDESIRABLE REDUCTIONS IN SPEEDS.
- ⑩ SUPERELEVATION MAY NOT BE REQUIRED ON LOCAL STREETS IN RESIDENTIAL AND COMMERCIAL AREAS.
- ⑪ THE BRIDGE WIDTH FOR URBAN ROADWAYS WITH SHOULDERS AND NO CURBS SHOULD NOT BE LESS THAN WIDTHS SHOWN FOR RURAL ROADS APPROVED ROADWAY WIDTHS.
- ⑫ MAXIMUM GRADES OF SHORT LENGTHS (LESS THAN 500') AND ON ONE-WAY DOWN GRADES MAY BE ONE PERCENT STEEPER.
- ⑬ FOR GUIDANCE ON FREEWAYS, REFER TO AASHTO, "A POLICY ON GEOMETRIC DESIGN OF HIGHWAYS AND STREETS."
- ⑭ INTERMEDIATE DESIGN SPEEDS (5 M.P.H. INCREMENTS) MAY BE APPROPRIATE WHERE TERRAIN AND OTHER ENVIRONMENTAL CONDITIONS DICTATE.
- ⑮ REFER TO AASHTO'S "GUIDE FOR THE DEVELOPMENT OF BICYCLE FACILITIES", CURRENT EDITION, WHEN COMBINING A PEDESTRIAN SIDEWALK WITH A BICYCLE PATH.

| Bicycle LOS   | E     |

Notes:

1. Note that the adjustment factor for level terrain is 1.00, as level terrain is one of the base conditions. For the purpose of grade adjustment, specific downgrade segments are treated as level terrain.
2. If  $v_i$  ( $v_d$  or  $v_o$ )  $\geq 1,700$  pc/h, terminate analysis-the LOS is F.
3. For the analysis direction only and for  $v > 200$  veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

3. For the analysis direction only and for  $v > 200$  veh/h.
4. For the analysis direction only.
5. Use alternative Exhibit 15-14 if some trucks operate at crawl speeds on a specific downgrade.

## **APPENDIX F**

### **PROJECT TEAM MEETING MINUTES**

### Meeting Minutes – KY 864 Beulah Church Road (Project Team Meeting No. 1)

The first project team meeting for the KY 864 Data Needs Analysis (DNA) Study was held on May 7, 2012 at 10:00 a.m. EST at the District 5 Design conference room in Louisville. The following individuals were in attendance:

|                |                                     |
|----------------|-------------------------------------|
| Jill Asher     | KYTC – Central Office Planning      |
| Dane Blackburn | KYTC District 5 Planning            |
| Paul Davis     | KYTC District 5 Design              |
| Keith Downs    | KYTC District 5 Design              |
| Robert Farley  | KYTC – Central Office Design        |
| Tom Hall       | KYTC District 5 Planning            |
| Brian Meade    | KYTC District 5 Project Development |
| Mikael Pelfrey | KYTC – Central Office Planning      |
| Tala Quinio    | KYTC District 5 Design              |

Keith Downs welcomed those in attendance and said the purpose of the meeting was to discuss the KY 864 Beulah Church Road widening project (Item 5-481.00) in Louisville, specifically the DNA study being prepared by Mikael Pelfrey.

Mikael Pelfrey then took over and began going through the aspects in the DNA study. This study will be one of the first completed under the new eight page format. Existing conditions of the project were explained. Project limits are Cedar Creek Road to the south and Rocky Lane to the north. This was modified slightly from the initial project listing of the Gene Snyder Freeway (I-265) to the north, because the existing segment between I-265 and Rocky Lane is three lanes. There are no existing plans available.

The extension of Cooper Chapel Road (Item 5-404.01) is currently in design. This project is within the KY 864 project limits and proposes extended Cooper Chapel Road to the east to eventually intersect with Bardstown Road. It was stated by those in attendance from District 5 this project wasn't high priority, and right-of-way money was being withheld by FHWA until later phases of design were complete.

Each of the nine elements of the project purpose and need were highlighted. The McNeely Lake Master Plan was brought to attention. This plan proposes the addition of a road through the park, which would affect traffic patterns. There aren't a high number of collisions, only 12 along the entire project limits within a three year period, but four were at the intersection with Adams Run Road.

The Preliminary Environmental Overview was completed by Jeff Schaefer, of District 5 environmental.

Three alternatives were developed in addition to the no build. The first called for widening KY 864 from the proposed tie-in at the Cooper Chapel Road extension to Rocky Lane, which would make the most heavily travelled stretch of road from the extension to the Gene Snyder Freeway three lanes. Another alternative focused on the collisions at Adams Run Road and suggested adding a turning lane. The final alternative widened the route to three lanes along the entire project limits.

Several recommendations were then suggested by the district. These are summarized below:

- Consider an alternative to eliminate the 90° curves (later eliminated once it was realized it would be extremely costly due to right-of-way expenses).
- The typical section for Cooper Chapel Road should not be used, but a map should be added showing the location of the proposed project in relation to the widening on KY 864.
- Add a map with projects from the Highway Plan and the Unscheduled Project List.
- Traffic volumes may lead to widening considerations of more than three lanes.
- A sight distance problem at the beginning of the project limits at the intersection with Cedar Creek Road.
- Consider a 10' shared use path on one side of the roadway because of the proximity of McNeely Lake Park to help with bicycle traffic.
- Louisville Metro had a permit to improve some cross drains and fixed headwall. Box culverts were also extended. Ditches were filled in and drainage was piped to avoid steep drop offs. No drainage problems to the knowledge of the district.
- Travis Thompson (District 5 design) stopped in for a period. Mr. Thompson lives in the area and stated the three way stops were not a current problem.

Ultimately it was advised three alternatives be incorporated into the final DNA, in addition to the no build. The first alternative would address the sight distance issues at the intersection of KY 864 and Beulah Church Road. The second alternative would widen KY 864 to three lanes from Adams Run Road to Rocky Lane, to help with collisions. The final alternative would widen the route from Cooper Chapel Road to Rocky Lane. It was determined widening along the entire project limits was unnecessary at this time.

Mikael Pelfrey would make the needed modifications and send the DNA to Keith Downs, who would complete the cost estimates for each alternative.

The meeting adjourned at approximately 11:45 EST.

**APPENDIX G**  
**COST ESTIMATES**

Explanation of Estimates  
Project: 5-0481.00 KY 864 Beulah Church Road  
DNA Study

| <u>PHASE</u> | <u>ALTERNATE 1</u> | <u>ALTERNATE 2</u> | <u>ALTERNATE 3</u> | <u>ALTERNATE 4</u> |
|--------------|--------------------|--------------------|--------------------|--------------------|
| DESIGN:      | NO BUILD           | \$35,000           | \$257,000          | \$599,000          |
| R/W:         | "                  | \$84,000           | \$624,000          | \$1,454,000        |
| UTILITIES:   | "                  | \$9,000            | \$455,000          | \$1,335,000        |
| CONST:       | "                  | <u>\$221,000</u>   | <u>\$1,652,000</u> | <u>\$3,848,000</u> |
| TOTAL        | "                  | \$349,000          | \$2,988,000        | \$7,236,000        |

**Alternate #1 - No Build** - This alternate should be carried forward, but does not meet the needs identified for the project.

**Alternate #2: Spot Improvement at Cedar Creek Road Intersection** - There is a T-legged intersection at KY 864 and Cedar Creek Road at the southern study limits (MP 1.818). Currently vehicles traveling southbound do not stop, while those going in the northbound or westbound direction encounter a stop sign. Trim vegetation along KY 864 to provide vehicles on Cedar Creek Road better sight distance before having to make their turning movement.

**Alternate #3: Minor widening from Adams Run Road to Rocky Lane** - Widen KY 864 from 2 lanes to 3 lanes from Adams Run Road (MP 2.785) to Rocky Lane (MP 3.152), a distance of 0.367 miles. The template should match the existing template at the northern study limits at Rocky Lane -- two 11' driving lanes and a 14' two way center left turn lane. Shoulders at minimum should be 3' but could be up to 8' in width depending on available right-of-way. The typical section should also include a 10' shared use path to accommodate bicyclists from nearby McNeely Lake Park and pedestrians from residential development growth. The largest subdivision utilizes Adams Run Road for access. Consequently, the intersection of KY 864 and Adams Run Road is the only location within the study limits with much of a crash history. If funding is an issue, this segment should be addressed first. Currently there is only a stop sign requiring vehicles to stop exiting Adams Run Road. In addition to the widening north of Adams Run Road, a 225 ft right turn lane should be constructed south of the intersection on northbound KY 864 to help with rear end crashes.

**Alternate #4: Minor widening from Cooper Chapel Road to Rocky Lane** - Widen KY 864 from 2 lanes to 3 lanes from Cooper Chapel Road (MP 2.297) to Rocky Lane (MP 3.152), a distance of 0.855 miles. The template should be rural -- two 11' driving lanes, a 14' two way center turn lane, 3' to 8' shoulders (depending on available right-of-way), and a 10' shared use path. This alternative widens the driving route to 3 lanes on KY 864 from the Gene Snyder Freeway (I-265) to the stop controlled intersection at Cooper Chapel Road.

NOTES:

Design Cost:

Estimated on Per Mile basis: \$750,000

Right of Way Cost::

Estimated on Per Mile basis: Ron Geveden, ROW Supervisor, recommended \$1,700,000 per mile

Utility Cost:

Estimated by D5 Utility Section:

Notes:

The Utility poles are PACKED with utility companies on them. But they all appear to be on the ROW line and therefore, we would not have to reimburse.

The estimate appears high for the water and sewer, but it was worst case of total relocation.

The water is close to the edge of road in many areas.

There is a MSD pump station near Cedar Creek Road. All design should avoid (Alt #4). That relocation would add \$500

UTILITY  
COMMENTS  
and NOTES:

The Utility poles are PACKED with utility companies on them. But they all appear to be on the ROW line and therefore, we would not have to reimburse. Contingencies, Misc (25%) + State Forces Engineering (20%)

Notes:

**Alternative 2: Spot Improvement at Cedar Creek Road intersection**

There is a T-legged intersection at KY 864 and Cedar Creek Road at the southern study limits (MP 1.818). Currently vehicles traveling southbound do not stop, while those going in the northbound or westbound direction encounter a stop sign. Remove trees and vegetation on the southeast quadrant of the intersection along KY 864 to the south to provide vehicles on Cedar Creek Road better sight distance before having to make their turning movement and if necessary shave the top of bank to achieve adequate sight distance, approximately 260 ft of tree removal.

UTILITY  
COMMENTS  
and NOTES:

The Utility poles are PACKED with utility companies on them. But they all appear to be on the ROW line and therefore, we would not have to reimburse. Contingencies, Misc (25%) + State Forces Engineering (20%)

## Notes:

### Alternative 3: Minor widening from Adams Run Road to Rocky Lane

Widen KY 864 from 2 lanes to 3 lanes from Adams Run Road (MP 2.785) to Rocky Lane (MP 3.152), a distance of 0.367 miles. The template should match the existing template at the northern study limits at Rocky Lane -- two 11' driving lanes and a 14' two way center left turn lane. Shoulders at minimum should be 3' but could be up to 8' in width depending on available right-of-way. The typical section should also include a 10' shared use path to accommodate bicyclists from nearby McNeely Lake Park and pedestrians from residential development growth. The largest subdivision utilizes Adams Run Road for access. Consequently, the intersection of KY 864 and Adams Run Road is the only location within the study limits with much of a crash history. If funding is an issue, this segment should be addressed first. Currently there is only a stop sign requiring vehicles to stop exiting Adams Run Road. In addition to the widening north of Adams Run Road, a 225 ft right turn lane should be constructed south of the intersection on northbound KY 864 to help with rear end crashes.

Template: 2' C&G, 10' Shared use path, 5' Sidewalk, 2-11' Lanes and 13' CLTL

Pavement Width : 35' gutter to gutter.

Sidewalk: one side: 5' wide

Embankment:  $10,000 \text{ CY per Mi} \times 0.978 \text{ mi} = 9,780 \text{ CY}$

| <b>**Total Utility Cost =</b> |          |          |            | \$ 1,330,194 |

**\*\* Utility estimates are based on best assumptions at the time of estimate.**

UTILITY  
COMMENTS  
and NOTES:

The Utility poles are PACKED with utility companies on them. But they all appear to be on the ROW line and therefore, we would not have to reimburse. Contingencies, Misc (25%) + State Forces Engineering (20%)

## Notes:

### Alternative 4: Minor widening from Cooper Chapel Road to Rocky Lane

Widen KY 864 from 2 lanes to 3 lanes from Cooper Chapel Road (MP 2.297) to Rocky Lane (MP 3.152), a distance of 0.855 miles. The template should be rural -- two 11' driving lanes, a 14' two way center turn lane, 3' to 8' shoulders (depending on available right-of-way), and a 10' shared use path. This alternative widens the driving route to 3 lanes on KY 864 from the Gene Snyder Freeway (I-265) to the stop controlled intersection at Cooper Chapel Road. This alternative would tie in to the Cooper Chapel Road extension in Phase II Design (Item No. 5-404.01) as shown in Exhibit 3.

Template: 2' C&G, 10' Shared use path, 5' Sidewalk, 2-11' Lanes and 13' CLTL

Pavement Width : 35' gutter to gutter.

Sidewalk: one side: 5' wide

Embankment: 10,000 CY per Mi x 1.334mi = 13,340 CY
