## APPENDIX D ENVIRONMENTAL OVERVIEW

## **Environmental Considerations**

Grayson County
US 62 from Leitchfield to Clarkson
Programming Study
Item No. 4-8303.00

Indicate whether the Area/Corridor(s)/Alternatives selection might potentially be						
infl	influenced by any known information or reasonable extrapolations from available data.					
Y	N	Archaeology				
	$\boxtimes$	Are there known archaeological sites within the proposed study areas that are				
Ш		either listed or potentially eligible for listing to the NRHP?				
		What is the distribution of the NRHP listed/potentially eligible archaeological				
		sites within the proposed study areas? N/A (see comments below)				
		Are there study areas that, due to certain landform characteristics, have a higher				
		potential for sites, especially NRHP eligible archaeological sites?				
		Are there study areas that could be recommended as having a lower potential				
		for sites, especially NRHP eligible archaeological sites? N/A (see comments				
		below)				
		Does the distribution of sites suggest anything of importance to project location				
		selection? N/A (see comments below)				
		Are there any special concerns/considerations/circumstances that should be				
		considered early in project development, such as a historical structure survey,				
		that would further identify potential issues from an archaeological perspective?				
Ide	ntify	any areas that should be avoided, if possible, to minimize resource impacts.				
		he concerns noted above are equally distributed across all alternatives, corridors				
or s	tudy	areas (should be so noted below), provide a specific explanation of varying				
deg	rees	by which the areas studied would be influenced or affected by the known or				
pote	ential	resource(s).				
Cor	nmei	nts: No previously recorded archeology sites have been identified within the				
pro	ject c	corridor. However, no known surveys have been performed in the proposed area.				
Upo	on re	view of site topography, soils, and available water sources it would be probable				
that	both	prehistoric and historic sites will be present.				
Y	N	Cultural Historic Resources				
		Are there known historic sites, districts, objects or structures within the				
		proposed corridors that are either listed or potentially eligible for listing to the				
		NRHP?				
		Has historic context of the area been developed that would allow the				
	$\boxtimes$	elimination of any buildings, districts, structures or objects that meet the 50				
		year old NRHP criterion?				
		Are there study areas that could be recommended as having a lower potential				
		for historic sites, especially NRHP eligible historic sites?				
		Does the distribution of sites suggest anything of importance to project location				
		selection?				

Identify any areas that should be avoided, if possible, to minimize resource impacts.						
Unl	Unless the concerns noted above are equally distributed across all alternatives, corridors					
or s	or study areas (should be so noted below), provide a specific explanation of varying					
deg	degrees by which the areas studied would be influenced or affected by the known or					
potential resource(s).						
Cor	nmer	nts: Historic baseline will be required for the Area of Potential Effect.				
		•				
Y	N	Socioeconomic				
		Are there any low-income or minority communities identified within the				
Ш		proposed corridors?				
П	$\boxtimes$	Are there Prime Farmland soils identified within the proposed corridors?				
		Are there any communities and/or business districts within the proposed				
Ш		corridors?				
		Are there any public recreation areas, such as parks or waterfowl refuges,				
Ш		located within the proposed corridors?				
		Can one or more of the proposed corridors be recommended as having a lower				
		potential for impacts to any of the resources identified above?				
Idei	ntify	any areas that should be avoided, if possible, to minimize resource impacts.				
	•	he concerns noted above are equally distributed across all alternatives, corridors				
		areas (should be so noted below), provide a specific explanation of varying				
		by which the areas studied would be influenced or affected by the consideration				
of this known or potential impact.						
		nts: Socioeconomic Baseline will be required to confirm responses.

		Will further study be required due to areas of the project anticipated to have a significant change in the vehicle types that drive the road? What type of and how much traffic will utilize the road? Is the traffic volume anticipated to be				
above 20,000 ADT?  Will there be a significant change in the grade of the road with regard to						
		braking noise and downshifting engine noise?				
	$\boxtimes$	With the spatial distribution of potential sensitive receptors, can				
		recommendations be made regarding project location selection?				
	Identify any areas that should be avoided, if possible, to minimize noise impacts. Unless					
	the concerns noted above are equally distributed across all alternatives, corridors or study					
	areas (should be so noted below), provide a specific explanation of varying degrees by					
		e areas studied would be influenced or affected by the consideration of this				
Cor		Ata. Maios Dagalina will be required to confirm responses				
Coi	mmer	nts: Noise Baseline will be required to confirm responses.				
Y	N	Underground Storage Tanks/Hazardous Waste				
Ħ		Are there any known or listed State or Federal Superfund sites within proximity				
	Ш	to the project and have they been addressed (closed)? (See comments below)				
		Are there any known or listed landfills, dumps or scrap yards within proximity				
	Ш	to the project? (See comments below)				
		Have there been any reportable releases of regulated substances in or near the				
	Ш	project area and have they been addressed (closed)? (See comments below)				
		Suggest limited phase 1 work by the consultant (costs = 1,500 to 3,000)				
	Ш	including ERD search – attach to planning document for review when				
		submitted to DEA.				
		When provided by Planning, comment on information from the public with				
		regard specifically to UST/HazMat issues. For example, people may know of situations that have been unreported and that may be of concern such as spills				
	ш	of chemicals, unauthorized storage of discarded tires and materials, abandoned				
		drum piles and above ground tanks etc(See comments below)				
Idei	ntify	any areas that should be avoided, if possible, to minimize impacts. Unless the				
		noted above are equally distributed across all alternatives, corridors or study				
		ould be so noted below), provide a specific explanation of varying degrees by				
		e areas studied would be influenced or affected by the consideration of this				
imp		·				
Cor	nmer	its: Several sites have been noted within the proposed project area that may be				
possible impact sites,						
Y	N	Ecology				
		Is there potential for the project to effect endangered species? Have the				
	$  \sqcup  $	USFWS, KSNPC, and KDFWR species lists and/or websites identified any				
		T&E species in the project area?				
		Would stringent erosion controls and/or stream avoidance be required? (See				
		comments below)				
		Are any outstanding resource, special use waters, etc., present in the project				
		area?				

Is habitat for any listed T&E species know to exist in the project area? (See comments below)					
Would a biological assessment or habitat assessment be required?					
Identify any areas that should be avoided, if possible, to minimize impacts. Unless the					
concerns noted above are equally distributed across all alternatives, corridors or study					
areas (should be so noted below), provide a specific explanation of varying degrees by					
which the areas studied would be influenced or affected by the consideration of this					
impact.					
Comments: Stringent erosion controls and/or stream avoidance may be required					
depending on project impacts. Habitat Assessment will be required to address all T&E					
species. BA may be needed depending on Habitat Assessment findings.					
Y N Permits					
Are any known or potential wetlands present in the project area?					
☐ ☑ Will floodplains be impacted by the project?					
Will any of the following likely be required for any of the study areas: 401					
permit, 404 permit, ACE Section 10 permit, Coast Guard permit, FEMA map					
revision, other? (specify below by study area)					
Identify any areas that should be avoided, if possible, to minimize impacts. Unless the					
concerns noted above are equally distributed across all alternatives, corridors or study					
areas (should be so noted below), provide a specific explanation of varying degrees by					
which the areas studied would be influenced or affected by the consideration of this					
impact.					
Comments: Permitting needs are unknown at this point. Upon reviewing the					
environmental footprint within the project area it appears that a blue line stream runs					
perpendicular to the project alignment. USACE Section 401/404 permits may be					
necessary.
