QUESTION: The advertisement mentions that this project covers the replacement of ten (10) bridges. In the past with projects covering multiple bridges, there have been instructions to base our Project Approach on 1 or 2 specific delineated bridges, since there is not enough room in the allotted 3 pages to discuss all ten. My question is, does Professional Services want to pick a couple of the bridges delineated in the DNA for us to cover in our Project Approach or would you rather us generally talk about how we would approach all of the bridges?

ANSWER: Consultants shall primarily focus their Project Approach section on bridges 075B00034N (McLean MP 8.156), 092B00085N (Ohio MP 3.356), and 092B00084N (Ohio MP 5.668). The Project Approach should take a Practical Solution approach and should address a design and construction process that minimizes the length of roadway closure. Use of Accelerated Bridge Construction (ABC) techniques may be considered, as appropriate, for each location.
