EPA ID# KYD 074 075 0441
Tetra Tech Project Number P2616**

Dear Mr. Hubbard:

KY DIV. OF WASTE MGMT
SUPERFUND BRANCH
RECEIVED
2003 OCT 27 A 11:44

COUNTY: Jefferson
FACILITY: Vermont American /500 Assoc.
I. D. #: 34565
SECTION: Main
SENT BY: JSG BRANCH SF

On behalf of 500 Associates, Tetra Tech EM Inc. (Tetra Tech) is pleased to provide this report documenting implementation of the supplemental groundwater sampling (Task 220) of the approved Management Plan for the former Vermont American facility located at 500 East Main Street in Louisville, Kentucky. Several documents that define or provide additional information concerning the supplemental groundwater sampling include the following:

- “Management Plan”, Tetra Tech, February 7, 2003,
- Kentucky Department of Environmental Protection (KDEP) Approval Letter, February 21, 2003,
- “KDEP Approval Response Letter”, Tetra Tech, March 28, 2003,
- KDEP Approval Letter of March 28, 2003 Correspondence, April 1, 2003,
- KDEP Request for Documentation Letter, May 30, 2003,
- “KDEP May 30, 2003 Letter Response” Tetra Tech, June 20, 2003,
- “Update Letter”, Tetra Tech, August 11, 2003.

The February 7, 2003 Management Plan was amended per the Tetra Tech “KDEP Approval Response Letter”, dated March 28, 2003. KDEP approved the Management Plan and subsequent modification in the February 21, 2003 and April 1, 2003 letters.

The supplemental groundwater sampling aspect of the Management Plan is not affected by either the proposed Kentucky Department of Transportation (KDOT) I-65 widening or the separation of the two parcels of property as discussed in the November 5, 2002 Tetra Tech letter titled "Jackson Street Property".

The management plan is being implemented in stages to accommodate the proposed I-65 widening, as discussed in the Tetra Tech letters of June 20, 2003 titled "KDEP May 30, 2003 Letter Response" and the August 11, 2003 letter titled "Update Letter". As such, this report documents Management Plan implementation associated with the supplemental groundwater sampling, (Task 220).

During implementation of this portion of the Management Plan, the following items have been completed:

- Task 220 – Supplemental Groundwater Sampling
- Task 410 – Institutional Controls – Jackson Street Building
- Task 510 – Land Use Deed Restriction – Jackson Street Building

Information concerning the implementation of Task 410 and Task 510 has been submitted under separate cover titled "Jackson Street Building Management Plan Implementation Report –" dated October 17, 2003. A discussion of the supplemental groundwater sampling which consists of the installation of one 70 foot monitoring well and the sampling and analyses of the existing monitoring well system is presented in the following paragraphs.

Monitoring Well Installation

The 70-foot monitoring well was installed on September 16, 2003, along the north side of Main Street at the approximate location shown in Figure 1. Hollow stem augers were utilized for well installation. No soil samples (split spoons) were collected of the material and a plug was used in the lead auger to minimize any effect of "heaving sand". Ten feet of 2-inch diameter Schedule 40 PVC 0.010 slot well screen was place between 60 to 70 feet below ground surface (bgs). During drilling groundwater was encountered at a depth of approximately 43 feet bgs. The well was completed with a flush mount cover and locking cap. A monitoring well construction diagram is shown in Attachment 1.

Monitoring well development was performed on September 17, 2003 and consisted of pumping the well until the water was clear. Purge water was collected in 55 gallon drums and stored on site prior to disposal. A total of 55 gallons of water was removed from the well, with the first $\frac{1}{2}$ gallon cloudy. The remainder of the development water was clear.

Groundwater Sampling and Analysis

Groundwater sampling of the four monitoring wells W-1 through W-4 was performed on September 23, 2003. Shallow Louisville Slugger field monitoring well MW-4 was not sampled, as permission for sampling the well was not granted by Louisville Waterfront Development.

Depth to water ranged from 41.6 feet to 42.8 feet bgs with elevations ranging from 419.0 to 419.3 ft above National Geodetic Vertical Datum of 1929. (Table 1) The direction of groundwater flow remains to the north toward the Ohio River.

Results of Groundwater Sampling

Consistent with historic groundwater chemistry data, trichloroethene (TCE) and tetrachloroethene (PERC) were detected above maximum contaminant levels (MCLs) in monitoring wells W-1 (0.0987 mg/l, 0.0064 mg/l), W-2 (0.179 mg/l, 0.0092 mg/l), and W-3 (0.088 mg/l, 0.0054 mg/l), while TCE was also detected above the MCL in the new monitoring well W-4 (0.213 mg/l /0.215mg/l). Total and hexavalent chromium were detected above MCLs in monitoring wells W-2 (1.68 mg/l, 1.41 mg/l) and W-3 (1.97 mg/l, 1.56 mg/l). A summary of the groundwater analytical results is presented in Table 1, with the laboratory report included as Attachment 2.

Conclusions

Based on historic data and the results of the resent groundwater sampling and analysis the following conclusions are drawn:

- Total and hexavalent chromium was detected above MCLs only in monitoring wells W-2 (1.68 mg/l, 1.41 mg/l) and W-3 (1.97 mg/l, 1.56 mg/l). These wells are located immediately adjacent to the former Bonded Warehouse plating operations in an area targeted for removal of soil that contains these metals. Once the soil removal is complete, the potential for impact to the groundwater by these metals should be eliminated.
- The suspected up gradient off-site source of the identified volatile organic compounds (VOC) has been confirmed, with the identification of elevated concentrations of TCE and PERC in both the shallow up-gradient monitoring well W-1 (40 to 50 foot depth bgs screened interval), along with the highest concentrations of these chemicals detected at depth as identified in monitoring well W-4 (60 to 70 foot bgs screened interval).
- Targeted soil sampling and analysis of potential source areas has failed to identify an on-site source of identified VOCs in groundwater.

- A soil gas survey, with samples collected at 2 foot intervals from 2 to 16 feet bgs did not identify a potential on-site VOC source area.
- The suspected source of the identified volatile organics in groundwater is the former manufacturing operation located immediately south of the alley (Billy Goat Strut) up-gradient of the 500 East Main Street property.
- Soil gas readings obtained from borings SP-6, SP-7 and SP-8, located along the southern property boundary (Billy Goat Strut), identified the highest recorded soil gas readings for TCE at depths ranging from 12 to 16 feet bgs which further supports a suspected TCE source south of the site.
- No further action is required concerning groundwater at the 500 East Main Street property other than pursuit by KDEP of the up-gradient source of VOCs.

On behalf of 500 Associates, Tetra Tech requests KDEP issue a no-further action letter associated with groundwater at the 500 East Main Street property and pursue the off-site source of the identified volatile organic groundwater contamination affecting the 500 East Main Street property. The presence of this contaminated groundwater migrating onto the site has impacted 500 Associates ability to bring the property into productive use.

Tetra Tech looks forward to the continued implementation of the Management Plan. Please contact Mark Mangun at 502-357-9350 or 502-836-7964 (cell phone) should you have any questions or comments.

Sincerely,

Tetra Tech EM, Inc

This report includes the analytical certificates of analysis for all samples listed below. These samples relate to your project identified below:

Project Name: 500 ASSOC.

Project Number: P2193.01.

Laboratory Project Number: 347837.

An executed copy of the chain of custody, the project quality control data, and the sample receipt form are also included as an addendum to this report. Any QC recoveries outside laboratory control limits are flagged individually with an #. Sample specific comments and quality control statements are included in the Laboratory notes section of the analytical report for each sample report. If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-800-765-0980. Any opinions, if expressed, are outside the scope of the Laboratory's accreditation.

LABORATORY COMMENTS:

ND = Not detected at the report limit.

B = Analyte was detected in the method blank.

J = Estimated Value below Report Limit.

E = Estimated Value above the calibration limit of the instrument.

= Recovery outside Laboratory historical or method prescribed limits.

End of Sample Report.
