SPECIAL PROVISIONS AND SPECIFICATIONS:

The Standerdard Specifications for Road and Bridge Construction, edition of 1956, as amended by the amendments and provisions published in Pamphlet No. 1 of "Approved Amendments, Provisions and Specification", with the following Special Specifications and additional Amendments and Provisions, will apply on this project:

Amendment No. 30 - Belt for Finishing Concrete Bridge Floors.
" " 32 - Transit Mixers.
" " 35 - Mixing Different Brands of Cements.
" " 35a - Barricades and Warning Signs.
Special Provision for Elastomeric Bearing Pads.
Special Provision for Finishing Concrete Bridge Floor
Special Provision for Construction Identification Signs on Federal-Aid Highways Projects.
Special Specification 16-56: Cast Aluminum Bridge Railing Posts.
Required Provisions - Federal-Aid Contracts - Interstate Highways (Rev. 7-6-59).
Two (2) Construction Identification Signs will be required, one at each end of project, placed where and as directed by the engineer on construction.
Road Department Standard Sheets as follows:
10.04 - Miscellaneous Standards, Part 2.
11.22 - Pipe Bedding Details.
11.23 - Circular and Non-Circular Pipe Chart.
16.05 - Manholes.
"Bridge Lighting" is hereby designated "Specially Item" within the meaning of the term as used in Section VII of the Required Provisions - Federal-Aid Contracts - Interstate Highways (Rev. 7-6-59).

7	KY. & IND	I-65-9 (3)136	1961	2		

DESIGN DATA

DESIGN SPECIFICATIONS:

Standard Specifications for Highway Bridges, Seventh Edition, adopted by the American Association of State Highway Officials, 1957 and as modified by the Design Specifications for this project with revisions dated June 1960 and Addendum No. 2.

DEAD LOAD:

Actual weight plus 20 lbs. per sq. ft. on full width of roadways for future wearing surface. The slab is designed with ½" thick monolithic wearing surface. The notation dead load shall include future wearing surface (F.W.S.) unless noted.

LIVE LOAD:

H20-S16-44, or 2-24,000 lb. axles spaced 4'-0" centers which ever is more critical, except floor slab designed for 16,000 lb. wheel load.

WIND LOAD:

Design wind velocity = 82 M.P.H. (50 lbs. per sq. ft.)

PERMISSIBLE UNIT STRESSES: (In lbs. per sq. in.)

Structural Steel		A7 & A373	A242, A440 & A441			HT	
Thickness		all	¾" & under	over ¾" to 1½"	over 1½" to 4"	⅝" to 2½"	over 2½" to 6"
Tension	*D.L.	20,000	30,000	26,700	24,400	45,000	40,000
	L.L.	18,000	27,000	24,000	22,000	40,000	36,000
Compression - See Design Specifications as modified							
Bearing (Milled Parts)	*D.L.	30,000	44,400	40,000	35,500	66,000	60,000
	L.L.	27,000	40,000	36,000	32,000	60,000	54,000

Shear on rivets (used as a measure of value of high strength (H.S.) bolts ASTM A325) 13,500 p.s.i

*For members to which the live load is applied directly, the permissible stresses for live load shall be used for dead load also.

The use of 90% D.L. at L.L. allowable is equivalent to the use of 100% D.L. at D.L. allowables.

CONCRETE:

Bearing (Steel on Concrete) = 1,000 p.s.i
Compression, f_c = 1,200 p.s.i
Reinforcing Steel (Tension) = 20,000 p.s.i

MISCELLANEOUS QUANTITY INFORMATION

BILL OF INCIDENTAL MATERIAL

Bid Item	Material	Unit	Quantity	Location
Structural Steel	⅛" Lead Plate	Lbs.	4,250	Under Shoes
Structural Steel	1" Elastomeric Bearing Pad	Sq. Ft.	14	Under L.L. Supports
Class A Concrete	6" Neoprene Waterstop	Lin. Ft.	2,490	Constr. Jt on ℄ Bridge
Class A Concrete	½" Premoulded Joint Filler	Sq. Ft.	560	Transv. Constr. Jt.
Class A Concrete	1" Premoulded Joint Filler	Sq. Ft.	1,260	Constr. Jt on ℄ Bridge
Class A Concrete	Copper (24 oz.)	Lbs.	690	Transv. Constr. Jt.
Class A Concrete	Hot Poured Crack & Joint Sealer	Lin. Ft.	4,870	Constr. Jts., Strg. Exp. Jts.
6"Ø W.I. Pipe	Steel Supports & Misc.	Lbs.	10,350	Pipe Drains

The bid item "Structural Steel" includes the following approximate estimated weights:*

HT Steel	5,829,000	Lbs.	A48 Gray Iron	38,800	Lbs.
A441 Steel	5,174,000	Lbs.	A120 Steel Pipe	97,600	Lbs.
A440 Steel	609,000	Lbs.	A72 W.I. Pipe	100	Lbs.
A242 Steel	27,700	Lbs.	A325 H.S. Bolts	364,000	Lbs.
A373 Steel	5,464,000	Lbs.	B22 or B100 Bronze	380	Lbs.
A7 Steel	4,072,000	Lbs.	Stud Shear Connectors	6,200	Lbs.
A235 Forgings	29,500	Lbs.	½"Ø Bent Studs	420	Lbs.
A237 Forgings	95,600	Lbs.	Grating	19,600	Lbs.
A27 Cast Steel	32,100	Lbs.	Total =	21,880,000	Lbs.

* Estimate based on nominal weights of material.

GENERAL NOTES

CONSTRUCTION SPECIFICATIONS:

Kentucky Department of Highways (1956 Standard Specification for Road and Bridge Construction with Amendments made in Pamphlet No. 1 dated April 1959) with Special Provisions and Supplemental Specifications.

EXISTING CONDITIONS:

The Piers for this structure have been or are being constructed under separate contract complete, including anchor bolts for the Shoes at Piers 1 thru 6 and for the Wind Transfer Devices at Piers 1 and 6.

The Superstructure Contractor shall arrange his work to match the existing locations (both dimensions and elevations) of the substructure. Any discrepancies between the substructure in place and these Plans shall be called to the attention of the Engineer before proceeding.

ELEVATION DATUM:

Mean Sea Level, United States Coast and Geodetic Survey, 1929 Readjustment. (1950 releveling).

CONCRETE:

Concrete in superstructure, including railing and median parapets shall be Class "A".
Reinforcing steel covering shall be 1 inch minimum clear in roadway slabs (plus ½" monolithic wearing surface on top of slab.)
Continuous concrete pours shall be required between construction joints as shown on the drawings.
Chamfer exposed edges ⅛" unless noted.
Roadway drains to be placed as shown on the drawings.

STRUCTURAL STEEL:

All shop and field connections shall be high strength (H.S.) bolts (ASTM A325) unless noted. Bolts are ⅝" to 1 ¼" as noted on the drawings.
Holes shall be 1/16" larger than nominal diameter of the bolts unless noted.
Holes for truss joints and stringer splices shall be subpunched or subdrilled and reamed to size while assembled. See the Special Provisions and Supplemental Specifications.
The shop details shall show a plan of match-marking for all reamed pieces.
Steel for gusset plates and splice plates shall be as noted on the drawings.
All truss joint gusset plates and all splice plates are to be removed and cleaned after reaming.
Splice plates for the truss members and stringers shall have planed or rolled edges. Plates that also serve as bracing gussets are excluded.
Splice plates for the truss members shall be fabricated with the direction of rolling parallel to the longitudinal axis of the members.

PERFORATED PLATES:

The size of the perforations for truss and bracing members shall be as noted on the drawings. The ratio of length to width of perforation shall be two to one. The clear distance between the first full perforation and the end of the plate or end perforation shall not be less than 1.25 times the width of the perforated plate. The clear distance between full perforations shall not be less than the width of the perforated plate. The ends of the perforations shall be circular. The perforations shall be uniformly spaced at or near minimum spacing in keeping with the notes and the details shown. Perforations in non-stressed diaphragms, etc. shall be as shown on the drawings. Perforated plates are shown thus: 2 (26-14) x ¾ ; 26=plate width, 14=perforation width, ¾ = plate thickness. End perforations to be as shown on the drawings.

WELDING NOTES:

Welding shall be in accordance with the Standard Specifications for Welded Highway and Railway Bridges of the American Welding Society (1956 Edition) and the Special Provisions and Supplemental Specifications.
All butt welds are to be full penetration welds. All corner groove welds shall be full penetration welds with back up bars, reinforcing fillet weld or sufficient plate lap which ever is shown or noted on the drawings.
All welds marked RT are to be radiographically inspected.
All welds marked MT are subject to magnetic particle inspection to the extent determined by the Engineer.

CAMBER:

Truss is to be cambered for full dead load.
Floorbeams are to be cambered for full dead load.

PAINTING STRUCTURAL STEEL:

Contact surfaces for shop or field connections with high strength bolts shall not be painted or lacquered. All paint and painting procedures shall be in accordance with the Standard Specifications. Shop Paint: One coat of red lead Type I. Field Paint: One coat of red lead Type I, tinted and Two coats of aluminum.

CONSTRUCTION PROCEDURE:

All truss joints to be completely bolted in an approved cantilever erection procedure.
Portals and sways may be bolted when erected.
Bottom lateral bracing is to be made to full D.L. length. The "K" bracing Panel Points 0 thru 13 and 23 thru 35 may be bolted when erected by jacking the floorbeams out of line. The "X" bracing between Panel Points 13 and 23 may be bolted at the trusses when erected; the connections of the center of the floorbeams are to be temporarily connected when erected. After the suspended span is swung and the stringers finally bolted, the final bolting of the bracing may be completed.
Top lateral bracing may be made from zero D.L. to full D.L. length to facilitate bolting when erected.
Floor beams may be bolted when erected.
Stringers are to be made to full D.L. length and may be bolted when erected using slotted holes. At a time when the erection stresses in the bottom chords are of the same sign and of closest magnitude (commensurate with erection procedure) to the final stress and before the concrete deck is poured, the stringer bolts to the floor beams are to be loosened to allow the floor beams to spring into or be jacked into realignment required by truss deformation. After the floor beams are realigned, all bolts in the fixed connections of all stringers are to be retightened. Each 3 and 4 span outer stringer unit (rows A and A') is fixed at only one or two floor beams and is free to move at the other to reduce bending stresses in the floor beam due to truss deformation. The bolts in these connections are to be finger tight with threads checked.

MATERIAL:

All material shall conform to the ASTM Specification designated in the Standard Specifications, Special Provision and Supplemental Specifications and/or on the drawings.

BILL OF INCIDENTAL MATERIAL:

Quantities shown in the "Bill of Incidental Material" are approximate only and the Contractor shall be responsible for furnishing sufficient material to complete the job in accordance with the plans and specifications. The cost of these items shall be included in the prices bid for the Bid Items indicated in the table.

ESTIMATE OF QUANTITIES

Bid Item	Unit	Quantity
Class "A" Concrete	Cu. Yds.	5,916.5
Steel Reinforcement	Lbs.	1,507,056
Structural Steel	Lump Sum	One
Aluminum Handrail	Lin. Ft.	4,993.5

Note:

The lengths of the members in the Geometrical Data Table are the theoretical lengths between work points based on the structure profile and span lengths. These lengths are the final dimensions with full dead load on the structure.

The fabricated member lengths are to be adjusted by the amount required to camber the structure for full dead load.

All vertical truss members are to be truly vertical. The double panel length members are on a straight line.

Panel dead loads are symmetrical about the ℄ of structure.

Concrete loads based on 154#/ft³ for reinforced concrete.

Note: See Stress Sheet Bracing System for Wind Load Reactions.
+ Indicates positive (upward) reaction
− Indicates negative (downward) reaction

STRESS SHEET MAIN TRUSS NOTES: (See also Sheet 10)

+ indicates tension
− indicates compression

Areas are in square inches.

Gross areas of box members for computing radius of gyration and unit stresses are taken through the least section of the perforations.

Net areas are least areas of members.

Members in which the live load causes a reversal in stress have the dead load less F.W.S. shown in parenthesis.

Allowable unit stresses are in kips per square inch. The indicated value is the allowable axial unit stress less the maximum bending unit stress due to the weight of the member and any other weight applied directly to the member based on permissible Live Load unit stress.

Stresses due to wind, earthquake, floor beam bending, live load secondary stresses, etc., are not given.

Bolt size indicates the size of bolt to be used for connections to the individual member. See Truss Notes on sheet 18.

See sheet 2 for General Notes and Design Notes.

Material Designations:
A373 = Structural Steel conforming with ASTM A373.
A440 = Structural Steel conforming with ASTM A440.
A441 = Structural Steel conforming with ASTM A441.
HT = High Yield Strength Structural Alloy Steel. See Special Provisions, par. 5.2.2.-1. & J.

Work this sheet with sheet 10.

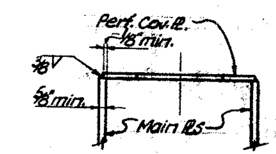
STRESS SHEET-MAIN TRUSS NOTES (Cont'd from Sheet 9)

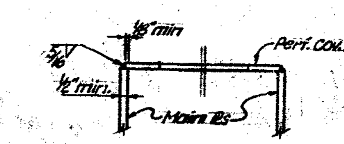
* Includes additional area due to use of minimum Main Plate Thickness. See Detail "A" for primary Truss Members.

Includes additional area due to use of minimum Main Plate Thickness. See Detail "B" for secondary Truss Members.

Δ Includes additional area due to allowance for stress induced by floor beam bending and pin friction.



DETAIL "A"
(For Primary Truss Members)



DETAIL "B"
(For Secondary Truss Members)

DEAD LOAD DEFLECTION NOTE:

\+ Indicates downward deflection.
\- Indicates upward deflection.

Deflections are computed assuming the complete structure loaded with the indicated loadings.

The deflections are computed using the following values: L = Panel point lengths, E = 29,000,000 lbs. per square inch, A = Net area of member thru perforation, plus 65% of the area of the perforation width.

Stress Sheet - Bracing System Notes:

Design Loads:

Group II a .. 50#/□' wind @ 100%

Group II b .. 50#/□' wind + transverse shear of 2½% of the total axial dead load compressive stress in that panel @ 125%.

Group III ... 30% of 75#/□' wind + wind on live load + transverse shear of 2½% of the total axial dead plus live load compressive stress in that panel @ 125%.

Group VII ... Earthquake loads of 2½% of dead load @ 133⅓%.

Plate widths shown for P30 thru P36 are approximate and may be altered slightly by the fabricator to fit the over all detail pattern.

CAMBER DIAGRAM
Floor Beams
(D.L. Camber Ordinate in inches)
θ1 & θ2 in Radians

Floor System Notes:

Diaphragms D1 are all located in the middle of the panels. The single diaphragms between stringers C-D and C'-D' provide intermediate support for the lateral bracing in the suspended spans. The double row of diaphragms support the transverse construction joints in the roadway slab.

Diaphragms D2 are located between stringers C-D and C'-D' over the floorbeams where the stringers are continuous.

Diaphragms D3 & D4 are located at each stringer expansion joint.

Diaphragms D5, D6 & D7 are shown on the framing plan.

The bolts in the sliding connections (for stringers A & A' only) are to remain finger tight as per General Notes on Sheet 2.

Material as noted on drawings.

See sheet 2 for General Notes.
See sheets 33 & 34 for Floorbeams.
See sheets 35 & 36 for Stringers.

TRUSS WELDING NOTES

① All fillet welds ⅜ except where governed by material thickness or otherwise shown.

② The inside fillet weld to be same as the outside fillet weld and is to extend from the end of the member to a minimum of 6 inches beyond the edge of the gusset plate on the following members:

All verticals.
Suspended span hangers at Panel Points 13 and 23 for the length of the thickened main plates.
All main diagonals except where spliced thru M joints.
All sub-diagonals.
Top chord members at U1, U8, U13, U14, U22, U23 and U28.
Bottom chord members at L0, L8, L12, L13, L23, L24 and L28.

③ Fillet welds to be ⅝ on members with ½ and 9/16 main plates and to be ⅜ on all others except where governed by material thickness.

④ The ⅜ × ⅜ bar is required as a backup bar for welding. The bar is to be continuous between the ends of the inside fillet welds indicated at the ends of the members.

⑤ Bar may be welded to either plate.

⑮ Fillet welds ¼" for ⅜ web plate, ⅝" for 7/16 and ½ web plates and ⅜" for web plates 9/16 and thicker unless noted.

TRUSS NOTES

Joints are shown for one half of the structure and are similar for the other half of the structure except as noted.

Material - Truss members as noted on "Stress Sheet - Main Truss". Truss gussets and other material as noted.

Trusses are to be bolted with 1"ϕ, 1⅛"ϕ or 1¼"ϕ H.S. bolts as indicated on the "Stress Sheet - Main Trusses", sheets 9 and 10. All bolts for all gussets, splice plates, floorbeam connections, diaphragm connections, bracing connections, etc. to each designated individual truss member are to be the same size. The necessary changes in bolt size are to be made in the gussets and splice plates at the truss joints and in the bracing connection plates and angles. Any exceptions are noted on the drawings.

A minimum pitch and a minimum gage of 4" is to be maintained where possible. The center gage for members with webs is to be 6½" for 1"ϕ and 1⅛"ϕ bolts and 6½" to 7" for members with 1¼"ϕ bolts where possible. Minimum edge distance to a sheared edge is 2" for 1⅛"ϕ bolts and 2¼" for 1¼"ϕ bolts and to a rolled or planed edge is 1¾" for 1⅛"ϕ bolts and 2" for 1¼"ϕ bolts.

Plates of truss tension members are to be thickened by butt welding a heavier plate at joints and splices where shown or noted on the truss details. This is required to maintain net section. Thickened Plates are to be of same material specification as member unless shown. See typical thickening details.

Optional welded splices shown are not permitted for U33-U34 & U34-U35.

Truss member plate perforations to be 14×28 unless shown. End perforations are as noted.

Welded diaphragms as noted are required on all box members made up of four plates.

Chord members at U13, U14, U22, U23, L12, L13, L23 and L24 and their connections may be altered as required for erection. Final outward appearance to be generally the same as shown.

Bolts in the top and bottom lateral bracing, portal, sway and strut connections are to be ⅞"ϕ H.S. bolts unless shown or noted.

Work Sheets 13 Thru 30 Together.

Other material as noted.
Welded diaphragms as noted are required on all box members.
Members in which the required plates are longer than those obtainable may be shop spliced by welding as shown for the "Optional Truss Shop Splices" detailed on sheet 14. 25% of such welds, selected at random by the Engineer, are to be radiographically inspected.

See sheets 42 & 43 for Roadway Sign Support Details.
The radii of Sway gusset plates shall vary with angle changes between the diagonals.

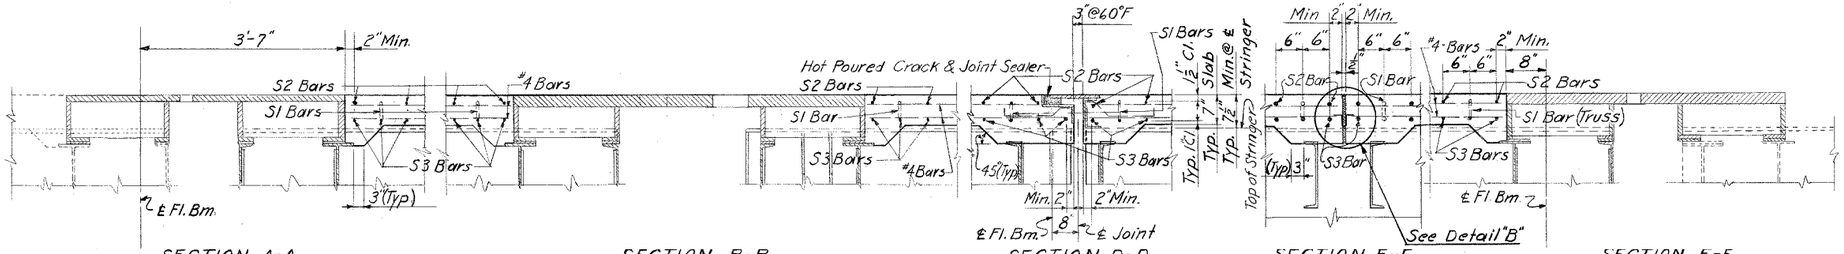
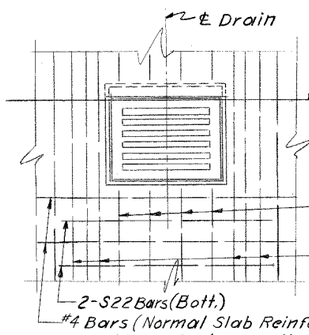
HALF CROSS SECTION
(Looking North)

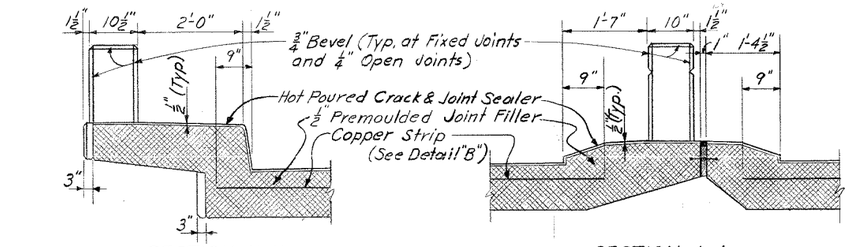
Typical Except Thru. Superelevation Transition in Panels 0 to 3- See Sheet 46 for Superelevation Data and Details of Parapet & Median.

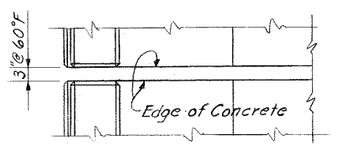




Note: All normal slab reinforcing in bottom of slab shall be bent to clear drains, top reinforcing shall be cut in field to clear. For outline of concrete around drains see sheet 41.

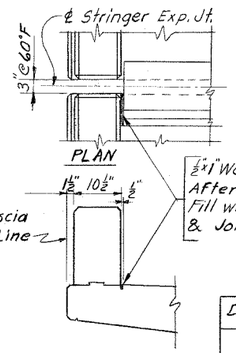
TYPICAL REINFORCING AT DRAINS





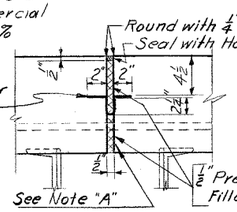
Note: Metal Stringer Exp. Jt. not shown

VIEW C-C (Expansion Joint)

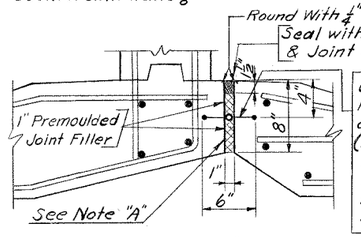


FORM STRIP DETAILS

9" Copper Strips are to be 24 Ounce Soft Sheet Commercial Grade. A Tolerance of 8% Variation in Wt. Above or Below that Specified Will be Allowed. Copper shall not be bent in field



DETAIL "B"



DETAIL "A"

Note "A" - Joint filler below waterstop shall be nailed to one side of joint with 20d nails @ 12" c/c Max. Countersink nails ⅛"

DEAD LOAD DEFLECTION TABLE @ ℄ PANELS				
Stringers	B thru E & B' thru E'	A & A'	F	F'
Three Panel Continuous:				
End Panels	0.008'	0.013'	0.012'	0.007'
Center Panel	0.001'	0.001'	0.001'	0.000'
Four Panel Continuous:				
End Panels	0.008'	0.012'	0.011'	0.006'
Center Panels	0.002'	0.004'	0.003'	0.002'

Note:
All panels shall have a constant 7" slab thickness between stringer haunches.
In panels 3 thru 0 top of slab shall be 7½" Min. above top of stringer flanges at the intersection of ℄ floor beams. The thickness of the haunches shall be increased between floor beams to allow for dead load deflections, and increased or decreased as required to allow for natural camber in the stringers. In panels 0 thru 3 the thickness of the haunches shall be further increased to allow for the superelevation transition.

ESTIMATE OF QUANTITIES

Class "A" Concrete - 5,915.2 Cu. Yds.
Steel Reinforcement - 1,507,056 lbs.

Note: For Bill of Incidental Material, See Sheet 2.

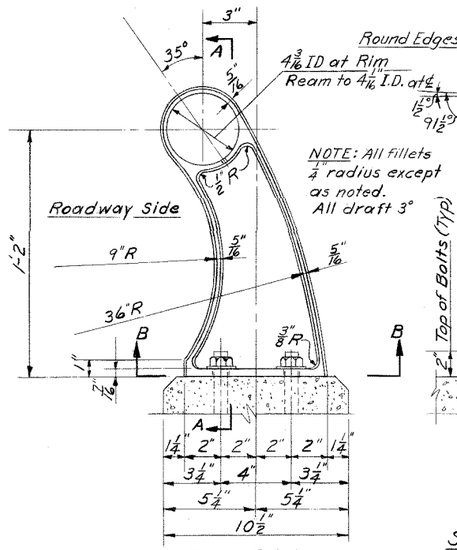
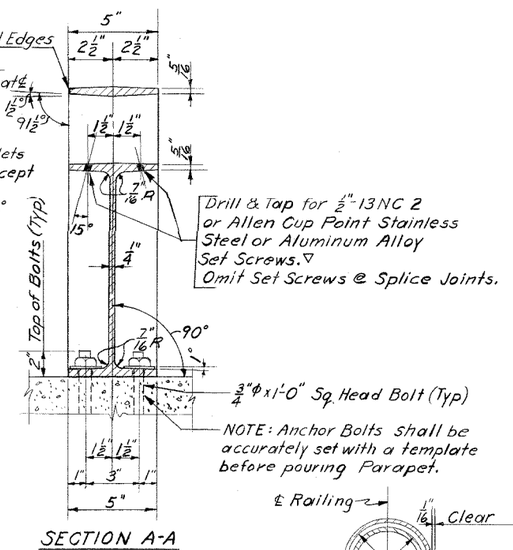
ALUMINUM HANDRAIL - ELEVATION

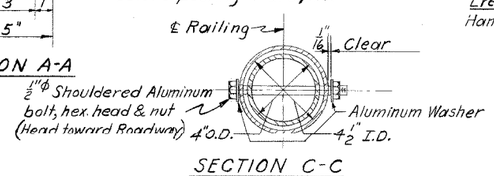
All Dimensions @ 60°



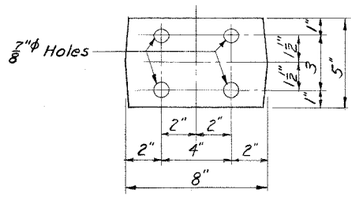
ELEVATION



SECTION A-A

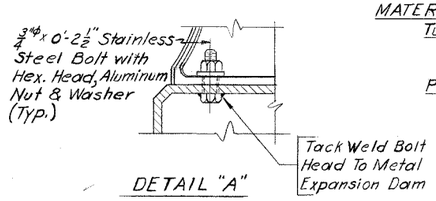


SECTION C-C



BOTTOM VIEW B-B

HANDRAIL POST DETAILS



DETAIL "A"

GENERAL NOTE

FABRICATION

General: See Roadway Slab drawings for exact spacing of posts. The contractor shall furnish the Department of Highways with complete shop detail plans of handrail for approval.

Cutting: Saw and mill all cuts.

Holes: All holes in castings shall be cored.

Welding: Use inert gas shielded arc; no flux. Welding not permitted except as shown on this sheet.

Finish: Posts and tubes shall be finished on exterior faces and edges with 120 sanding belts.

Appearance: Scoring or marring of surfaces sufficient to cause objectionable appearance shall be cause for rejection of damaged piece.

MEASUREMENT AND PAYMENT

Payment: Will be made on the basis of the measured length of handrail between ends. Payment will be made at the contract unit price per linear foot for complete handrail in place, including anchor bolts, and shall be complete compensation for all materials, equipment, tools and labor incidental to the manufacture, fabrication and erection of the handrail.

Erection:

Handrail Posts shall be set at right angles to fascia line. Tubing shall be erected on a line parallel to the fascia line. Washer shims (maximum thickness 1/8") may be used between concrete or steel supports and post base for post and/or tubing alignment.

The void space under the post base shall be filled with an Alumilastic compound or approved equal so as to completely insulate the aluminum from the concrete or steel supports. The contractor shall furnish the Department of Highways with complete erection detail plans showing location of splices and erection details for approval.

MATERIAL

Tubing: Aluminum, A.S.T.M. designation B 235, current specifications. Alloy GS 11A, temper T6. Tubing lengths to equal 3 post spaces; 25 feet or less.

Posts: Aluminum A.S.T.M. designation B 108 current specifications. Alloy designation SG 70B however the casting shall be heat-treated to a T6 temper instead of T61 temper listed in B108-59 for Alloy SG 70 B in order to produce properties listed under "Tensile Properties" given A356-T6.

MATERIAL (Cont.)

Anchor Bolts: 3/4"ϕ x 1'-0" Square head machine bolts threaded 2". Furnish with one (1) hex. nut and one (1) washer each. All to conform to A.S.T.M. designation A 276 types 302, 303 or 304, current specifications, or to conform to A.S.T.M. designation A 307 current specifications and galvanized, conforming to A.S.T.M. designation A 153, current specifications.

▽ Set Screws: 1/2"ϕ 13 NC 2 square head or Allen Cup Point stainless steel set screws, A.S.T.M. designation A 276, type-302, 303 or 304, current specifications.

Closure Plate: 5/16" thick A.S.T.M. designation B 209. Alloy GS11A, current specifications, temper T-6, or casting same alloy as posts.

Notarized Mill Test Reports in triplicate shall be furnished showing that the materials comply with the specifications.

▽ Alternate: Set Screws may be aluminum alloy 1/2"ϕ-13 NC 2 square head or Allen Cup Point (2024 T4 with 205 Alumilite finish) A.S.T.M. B 211-56T alloy C G 42A condition T4 Anodic coating .0002 inches Chromate sealed.

LIGHTING SPECIFICATIONS

SCOPE: THE WORK REQUIRED FOR THE BRIDGE ROADWAY MERCURY VAPOR MULTIPLE LIGHTING SYSTEM SHALL INCLUDE THE FURNISHING OF ALL PLANT AND LABOR, EQUIPMENT, APPLIANCES, MATERIALS, TRANSFORMERS, AND PERFORMING ALL OPERATIONS IN CONNECTION WITH THE INSTALLATION OF THE ROADWAY LIGHTING SYSTEM, NAVIGATION LIGHTING SYSTEM, AND SERVICE TO ROADWAY SIGNS, COMPLETE IN STRICT ACCORDANCE WITH THESE SPECIFICATIONS AND THE APPLICABLE DRAWINGS, AND SUBJECT TO THE TERMS AND CONDITIONS OF THE CONTRACT.

APPLICABLE SPECIFICATIONS: THE FOLLOWING SPECIFICATIONS AND STANDARDS FORM A PART OF THESE SPECIFICATIONS:

KENTUCKY DEPARTMENT OF HIGHWAYS 1956 STANDARD WITH AMENDMENTS.

LATEST ISSUE OF THE NATIONAL ELECTRICAL CODE.

STANDARDS OF UTILITY COMPANY SERVING THE INSTALLATION.

DEFINITION: WHEREVER THE WORD "ENGINEER" OCCURS IN THE SPECIFICATIONS, IT SHALL BE UNDERSTOOD TO MEAN THE HIGHWAY DEPARTMENT OR ITS DULY APPOINTED REPRESENTATIVE.

GENERAL: THE LIGHTING SYSTEMS SHALL BE COMPLETE WITH ALL NECESSARY ACCESSORIES FOR PROPER OPERATION. POWER FOR THE LIGHTING SYSTEM WILL BE PROVIDED BY OTHERS TO JUNCTION BOX AT PIER NO. 1, AS SHOWN ON THE DRAWINGS. THE SERVICE TO AND THE MOUNTING OF THE TRANSFORMER AND ASSOCIATED EQUIPMENT ON PIER NO. 2 SHALL BE FURNISHED AND INSTALLED BY THIS CONTRACTOR. THE INSTALLATION OF ALL EQUIPMENT SHALL BE IN ACCORDANCE WITH THE RULES AND STANDARDS OF THE UTILITY COMPANY SERVING THE INSTALLATION.

THESE SPECIFICATIONS ARE TO BE ACCOMPANIED BY DRAWINGS, SHEETS NOS. 55, 56 AND 57. THE DRAWINGS WITH SUCH WRITINGS, INTERLINEATIONS AND DETAILS AS MAY BE UPON THEM SHALL BE CONSIDERED A PART OF AND ILLUSTRATION OF THESE SPECIFICATIONS. THE CONTRACT DRAWINGS INDICATE THE EXTENT AND GENERAL ARRANGEMENT OF THE LIGHTING CIRCUITS AND EQUIPMENT. THE DRAWINGS ARE TO BE USED FOR THE GENERAL GUIDANCE OF THE CONTRACTOR, AND ANY COMMISSION OR OMISSION SHOWN OR IMPLIED SHALL NOT BE CAUSE FOR DEVIATING FROM THE INTENT OF THE DRAWINGS AND SPECIFICATIONS. IF ANY DEPARTURES FROM THE CONTRACT DRAWINGS ARE DEEMED NECESSARY BY THE CONTRACTOR, DETAILS OF SUCH DEPATURES, AND THE REASONS THEREFOR AND THE RESULTS THEREOF, SHALL BE SUBMITTED TO THE ENGINEER IN WRITING FOR APPROVAL. NO SUCH DEPARTURES SHALL BE MADE WITHOUT THE PRIOR WRITTEN APPROVAL OF THE ENGINEER.

CONDUITS: THE CONTRACTOR SHALL FURNISH ALL CONDUIT, JUNCTION BOXES, CONDULETS, EXPANSION JOINTS, ETC., AS REQUIRED AND INSTALL SAME AS INDICATED ON THE DRAWINGS. CONDUIT EXPANSION FITTINGS SHALL BE INSTALLED AT ALL CROSSINGS OF EXPANSION JOINTS ON THE BRIDGE. ALL CONDUIT SHALL BE HEAVY WALL STEEL. HOT DIPPED GALVANIZED INSIDE AND OUT. THE SIZE OF THE CONDUIT SHALL BE AS INDICATED ON THE DRAWINGS, OR WHERE NOT SO INDICATED, IT SHALL BE OF SUFFICIENT SIZE TO MEET THE N.E. CODE REQUIREMENTS. NO CONDUIT SHALL BE LESS THAN 3/4". CONDUIT FITTINGS SHALL BE THREADED AND MADE OF GALVANIZED CAST IRON. CONDUITS AND FITTINGS SHALL BE PROVIDED WITH SUITABLY LOCATED DRAIN TEES, AND HOLES SHALL BE CAREFULLY PLACED SO THAT MOISTURE THAT MAY ACCUMULATE WILL DRAIN OUT. BENDS SHALL BE USED SPARINGLY AND THE TOTAL BENDING BETWEEN PULL BOXES OR JUNCTION BOXES SHALL NOT EXCEED 180 DEGREES. THE RADIUS OF ANY BEND SHALL NOT BE LESS THAN TWELVE TIMES THE NOMINAL SIZE OF THE CONDUIT. ENDS OF CONDUIT SHALL BE REAMED AND THREADS PAINTED WITH WHITE LEAD WHEN FITTED UP.

ALL SERVICE CABLE TO MERCURY VAPOR LUMINAIRES AND ROADWAY SIGNS SHALL BE IN FLEXIBLE CONDUIT WHERE THESE RUNS ARE THROUGH THE STRUCTURAL MEMBERS OF THE BRIDGE, AS INDICATED ON THE DRAWINGS.

WIRING: ALL WIRE FOR THE BRIDGE LIGHTING SYSTEMS(EXCEPT THE 2.4 KV FEEDER) SHALL BE SINGLE CONDUCTOR AWG COPPER OF SIZE AS INDICATED ON THE DRAWINGS. CONDUCTORS NO. 8 AND SMALLER SHALL BE SOLID, AND NO. 6 AND LARGER SHALL BE STRANDED. INSULATION FOR THE CONDUCTORS SHALL BE AS FOLLOWS:

NO. 12 and NO. 10 CONDUCTORS: (1) 3/64" RUBBER INSULATION (ASTM D 754) WITH 1/64" POLYCHLOROPRENE (NEOPRENE) JACKET, OR (2) 4/64" POLYVINYL THERMOPLASTIC INSULATION.

NO. 8 CONDUCTORS: (1) 4/64" RUBBER INSULATION (ASTM D 754) WITH 1/64" POLYCHLOROPRENE (NEOPRENE) JACKET OR (2) 5/64" POLYVINYL THERMOPLASTIC INSULATION

NO. 2, NO. 4 AND NO. 6 CONDUCTORS: (1) 4/64" RUBBER INSULATION (ASTM D754) WITH 2/64" POLYCHLOROPRENE (NEOPRENE) JACKET, OR (2) 4/64" POLYVINYL THERMOPLASTIC INSULATION.

POLYETHYLENE INSULATION WILL NOT BE ACCEPTED AS EQUIVALENT TO POLYVINYL INSULATION. THE WIRES FOR EACH CIRCUIT MUST BE COLOR CODED, AND WHERE MORE THAN ONE CIRCUIT IS INSTALLED IN THE SAME CONDUIT,PERMANENT CIRCUIT IDENTIFICATION NUMBERS MUST BE AFFIXED TO THE WIRES.

THE 2.4 KV. SERVICE FEEDER FROM JUNCTION BOX AT PIER NO. 1 TO TRANSFORMER AT PIER NO. 2 SHALL CONSIST OF TWO (2) STRANDED SINGLE CONDUCTOR CABLES OF SIZE AS SHOWN ON DRAWINGS. THE CONDUCTOR SHALL HAVE 10/64" RUBBER INSULATION WITH A 4/64" POLYVINYL CHLORIDE COMPOUND JACKET, AND SHALL CONFORM TO IPCEA SPEC. S-19-81, THIRD EDITION (NEMA WC-3-1959).

SPLICES: SPLICES WILL BE PERMITTED ONLY IN JUNCTION BOXES, AND MUST BE MADE WITH MECHANICAL CONNECTORS OR A TYPE TO BE APPROVED BY THE ENGINEER, OR TWISTED AND SOLDERED. FOR THE 480 VOLT CIRCUITS OR LESS, WIRE SPLICES MUST BE PROTECTED AS FOLLOWS: DOUBLE SPIRAL WRAP OF RUBBER TAPE, DOUBLE SPIRAL WRAP OF FRICTION TAPE, THOROUGH PAINTING OF THE COMPLETED SPLICE WITH AN ELECTRICAL INSULATING PAINT. THE 2.4 KV WIRE SPLICES MUST BE MADE TO CONFORM TO THE MANUFACTURER'S SPECIFICATIONS,ALSO TERMINATIONS.

DRAWINGS: THE CONTRACTOR SHALL PROVIDE, AT NO EXTRA COST, A COMPLETE SET OF WORKING DRAWINGS, SHOWING THE ARRANGEMENT AND LOCATION OF ALL EQUIPMENT AND CIRCUITS. THESE DRAWINGS WILL NOT BE REQUIRED UNTIL COMPLETION OF THE WORK, PROVIDED THAT ALL WORK IS DONE IN GENERAL AGREEMENT WITH THE SPECIFICATIONS. IF ANY EXCEPTIONS TO THE SPECIFICATIONS OR DRAWINGS ARE TAKEN BY THE CONTRACTOR, DRAWINGS MUST BE SUBMITTED TO THE ENGINEER FOR APPROVAL PRIOR TO COMMENCEMENT OF SUCH WORK. THE CONTRACTOR SHALL PROVIDE IN TRIPLICATE DESCRIPTIVE LITERATURE AND/OR DRAWINGS FURNISHED BY THE MANUFACTURERS OF ALL MATERIALS USED FOR APPROVAL PRIOR TO COMMENCEMENT OF WORK. EXCEPTIONS TO MATERIALS SPECIFIED MAY BE TAKEN ONLY WITH PRIOR WRITTEN APPROVAL OF THE ENGINEER.

TEST: AFTER THE INSTALLATION IS COMPLETED, AND AT SUCH TIME AS THE ENGINEER MAY DIRECT,THE CONTRACTOR SHALL CONDUCT AN OPERATING TEST FOR APPROVAL. THE EQUIPMENT SHALL BE DEMONSTRATED TO OPERATE IN ACCORDANCE WITH THE REQUIREMENTS OF THESE SPECIFICATIONS. THE TEST SHALL BE PERFORMED IN THE PRESENCE OF THE ENGINEER OR HIS AUTHORIZED REPRESENTATIVE. THE CONTRACTOR SHALL FURNISH ALL INSTRUMENTS AND PERSONNEL REQUIRED FOR THE TEST AND THE STATE WILL FURNISH THE NECESSARY ELECTRICAL POWER.

PAINTING: ALL PAINTING SHALL BE DONE IN ACCORDANCE WITH THE KENTUCKY DEPARTMENT OF HIGHWAYS STANDARD SPECIFICATIONS.

RESPONSIBILITY: THE CONTRACTOR WILL BE HELD RESPONSIBLE FOR A PERIOD OF ONE YEAR FROM DATE OF ACCEPTANCE FOR DEFECTIVE MATERIALS AND/OR WORKMANSHIP. UPON NOTICE OF FAILURE FROM THE ENGINEER DURING THIS PERIOD,THE AFFECTED PART OR PARTS SHALL BE REPLACED BY AND AT THE EXPENSE OF THE CONTRACTOR. FIVE PERCENT (5%) OF THIS LUMP SUM BID WILL BE WITHHELD UNTIL EXPIRATION OF THIS ONE YEAR PERIOD.

LUMP SUM BID: BRIDGE LIGHTING WILL BE MEASURED AS A UNIT, AND PAID FOR AT THE CONTRACT LUMP SUM PRICE BID FOR BRIDGE LIGHTING. THE LUMP SUM BID SHALL BE FULL COMPENSATION FOR FURNISHING ALL MATERIAL AND EQUIPMENT AND FOR TRANSPORTATION, INSTALLATION, PAINT AND PAINTING,TOOLS AND INCIDENTALS NECESSARY TO COMPLETE THE ELECTRICAL WORK.

LIGHTING EQUIPMENT LIST

QUANTITY	ITEM	DESCRIPTION
37	MERCURY VAPOR LUMINAIRES	LUMINAIRE WITH MOGUL MULTIPLE SOCKET FOR USE WITH H33-1-CD MERCURY LAMPS. TO BE ARRANGED FOR IES TYPE III DISTRIBUTION AND FOR 1½" SLIP FITTER MOUNTING. TO BE GENERAL ELECTRIC TYPE M-400, WESTINGROUSE TYPE OV-25, OR LINE MATERIAL TYPE 2A2, OR APPROVED EQUAL. UNIT TO BE PROVIDED WITH BUILT-IN REGULATED OUTPUT BALLAST TO OPERATE IN 440 VOLT MULTIPLE CIRCUIT. TYPE H33-1-CD MERCURY LAMPS, APPROXIMATELY 21,000 LUMENS OUTPUT.
37	BRACKET ASSEMBLY	TAPERED STEEL ARM, 4'-0" SPREAD, WITH 1½" SLIP FITTER COMPLETE WITH WALL PLATE FOR INTERNAL WIRING, UNION METAL DESIGN NO. 34-T1, OR APPROVED EQUAL.
AS REQUIRED	CONDUIT EXPANSION FITTINGS	CROUSE-HINDS TYPE XJ WITH GC100 GROUNDING STRAPS AND GC102 STRAP CLAMP, OR APPROVED EQUAL.
AS REQUIRED	CABLE	5 KV. SINGLE CONDUCTOR STRANDED NO. 8 GENERAL ELECTRIC CAT. NO. SI 58213. OR APPROVED EQUAL.
AS REQUIRED	CABLE TERMINATORS	5 KV. CABLE TERMINATORS FOR ABOVE CABLE.
AS REQUIRED	CABLE	600 VOLT SINGLE CONDUCTOR NO. 6, AS SPECIFIED.
AS REQUIRED	CABLE	600 VOLT SINGLE CONDUCTOR NO. 10, AS SPECIFIED.
AS REQUIRED	FLEXIBLE CONDUIT	WEATHERPROOF FLEXIBLE STEEL CONDUIT WITH PLASTIC JACKET, SEALTITE OR APPROVED EQUAL.

CONTROL CABINET EQUIPMENT LIST

QUANTITY		ITEM	DESCRIPTION
(1)	2	CIRCUIT BREAKER	600 V. 30 AMP. 2-POLE, WESTINGHOUSE TYPE F, CAT. NO. S-F-2030 SURFACE MOUNT NEMA 1, OR APPROVED EQUAL.
(2)	1	CIRCUIT BREAKER	600 V. 20 AMP. 2-POLE, WESTINGHOUSE TYPE F. CAT. NO. S-F-2020 SURFACE MOUNT, OR APPROVED EQUAL.
(3)	1	LOAD CENTER	WESTINGHOUSE, TYPE E, 240-120 VOLT, 4-CIRCUIT, CAT. NO. SLE 4, 1-30 AMP 3-POLE BREAKER, STYLE E3030, OR APPROVED EQUAL.
(4)	1	PLUG FUSE CUTOUT	SINGLE POLE, 15 AMP., 125 VOLTS.
(5)	1	OUTLET BOX	4" ROUND OUTLET BOX WITH DUPLEX CONVENIENCE OUTLET 15 AMP. 125 V.
(6)	1	DRY TYPE TRANSFORMER	480/240/120 V. 7-1/2 KVA WESTINGHOUSE TYPE EP, CAT. NO. S48C113C07A, OR APPROVED EQUAL.
(7)	1	DISTRIBUTION TRANSFORMER	2400/240/480 V. 25 KVA GENERAL ELECTRIC CAT. NO. 2708AD6525 OR APPROVED EQUAL.
(8)	1	FUSE CUTOUT	2400 V. 100 AMP OIL FUSE CUTOUT, GENERAL ELECTRIC CAT. NO. 9F31AAA101, COMPLETE WITH 50 AMP FUSE LINKS CAT. NO. 9F57CAA050, AND OPERATING MECHANISM CAT NO. 9F31RAM101, OR APPROVED EQUAL.

NAVIGATION LIGRTING EQUIPMENT LIST

4-CHANNEL NAVIGATION LIGHTS, WITH 200 M. M. 360° GREEN FRESNEL DRUM LENS, COMPLETE WITH TRANSFORMER, TAMPER PROOF SWIVEL SUSPENSION MOUNTING, AUTOMATIC LAMP CHANGER, AND FOUR (4) PREFOCUSSED BASE LAMPS. WALLACE AND TIERNAN TYPE FA-230 SWIVEL SUSPENSION MOUNTING TYPE FA-231 NAVIGATION LIGHTS, TYPE SK-5529 LAMP CHANGER WITH TYPE FP-1789 LAMPS, OR APPROVED EQUAL.

8-PIER LIGHTS, NAVIGATION TYPE WITH 200 M. M. FRESNEL DRUM LENS, 180° RED, 180° DARK, COMPLETE WITH TRANSPORMER, 12" HIGH PEDESTAL MOUNTING, AUTOMATIC LAMP CHANGER AND FOUR (4) PREFOCUSSED BASE LAMPS. WALLACE AND TIERNAN, TYPE FA-231 NAVIGATION LIGHT, TYPE FA-229 PEDESTAL, TYPE SK-5529 LAMP CHANGER WITH TYPE FF-1789 LAMPS, OR APPROVED EQUAL.

NOTES:

The contractor shall ground the bridge structure with No 4 bare copper wire to grounds cast in each pier by others.

All equipment, conduits and circuits, as shown on the plans, shall be effectively grounded to the nearest ground.

Junction box at Pier No 1 for 2400 volt service shall be Galv. C. I. (¼" min. wall) weather proof and of size as required for splicing 5 K. V. cables.

All conduit runs shall be tied to each hanger with suitable fasteners.

All wiring to Mercury Lights and Roadway Signs shall be run in flexible metallic conduit. See Sheet No 57 for details.

No holes to be drilled in flanges of stringers or floor bms.

See Sheet 12 for location of truss and stringer exp. joints where expansion fittings will be required.
