of guardrail and end treatment type 3 shall be removed and replaced. When replacing, carry the tangent length of guardrail beyond the culvert prior to tapering approximately 100' beyond the existing point of beginning taper. While the guardrail is removed, shoulder the area under the guardrail to reform the deteriorated slopes.

18. Several locations exist throughout the project where the existing aggregate shoulder has eroded significantly and require repair. Two locations in particular, WB STA 1914+00 and the WB exit ramp near STA 2005+00, shall be repaired. These locations shall be laid out by the section engineer prior to beginning work. They will be filled and compacted with No. 2 aggregate. If any of these areas fall under existing guardrail, remove the guardrail and reset to current standards, transitioning as per RBR-018. All work for this item of work will be paid for under Aggregate No. 2 and Remove and Reset Guardrail if required.
19. Eastbound I-64 near station 1875+00 the roadside ditch has eroded significantly to the point it will soon begin to impact the roadway. The Contractor is to reshape this ditch from Station 1873+50 to 1881+75 and line the ditch with Class 3 channel lining. The reshaping of the ditch is included in the "Ditching" bid item while the Class 3 channel lining shall be paid for by ton as Class 3 channel lining.
20. Beginning at Station 1813+00, mill 8" of asphalt as shown on the typical section and replace with 1.5" of surface and 2 lifts of 3.25" asphalt base. Due to poor pavement drainage within this area, pavement edge drains will be installed along the inside shoulder as shown on the typical sections. Edge Drain will be trenched into the approximate depth 1' minimum below the drainage blanket layer. Construct Edge Drain as per details in the proposal.
21. Entrance and Exit ramps near Mile Marker 27 shall be resurfaced only. Base replacement for mainline will occur under mainline pavement and 4' beyond the white line. This includes the 4' that runs through the beginning of the ramp. Ramps, however are only to be milled and resurfaced. Mill and Texture as well as resurface each of the four ramps 1.5" deep beyond this 4' base replacement of mainline to the location just prior to the traffic loops and gore markings as shown on the plan sheets.
