

Construction Memo No. 4-02

MEMO TO: Chief District Engineer
TEBM's for Construction
District Construction Engineers
Resident Engineers
Active Consultant Engineers

FROM: Dexter Newman, P. E. Director
Division of Construction

DATE: May 1, 2002

SUBJECT: Formal Acceptance of Projects

Section 105.12 of the 2000 edition of the Standard Specifications spells out the procedures for how the Department accepts a project. There are some detailed time limits on both the Department and contractor to perform. Last year was the first time that these limits became a factor, and a "general amnesty" time extension for completing project punchlists was granted due to confusion about the new procedures. It seems that that confusion has carried over into the 2001 season.

Attached is a listing of projects let under the 2000 version of the Standard Specifications that were completed prior to this year that are not formally accepted. Technically, many of these projects would be subject to the liquidated damages component of the specification. Additionally, there are some projects not on this list which have been called complete during the winter of 2001-2002 where the normal 90 days after notification called for under the specification will mandate all corrective work to be finished. Due to some confusion about the specification procedures, we will not assess any liquidated damages on these projects for uncompleted corrective work until June 1, 2002, which is the longest time period possible under this specification.

The 2002 season will be the third season that this specification is in place. Hopefully, everyone will have figured it out by now. The resident engineer has to formally notify the contractor of the entire corrective work he is responsible for. There is an official form posted on the Department's web site for this notification. It is in the process of being assigned an official form number. The date of this notification dictates when the corrective work must be completed by. Until now, this date has not been recorded anywhere. Please send a copy of this notification to the Central Office when it is sent out. The project database files are being modified to record this date.

The goal of this specification is to get the corrective work done on projects completed in a timely manner, not to collect liquidated damages. However, any of these projects where the corrective work is done finished by June 1, 2002 will be subject to being charged the liquidated damages provision of Section 105.12 of the Standard Specifications.
