KYTC Seeking Input on KY 52 Planning Study in Boyle & Garrard Counties

LEXINGTON, KY (September 28, 2021) – The Kentucky Transportation Cabinet is seeking public input on planning study improvement concepts for the KY 52 corridor between Danville and Lancaster.

KYTC initiated a study of the corridor with consultant engineering firm Qk4, Inc. in August 2020. The team has been working to identify existing conditions, review community input from the previous survey effort in January 2021, and recommend possible short- and long-term highway improvements for the narrow, two-lane highway.

There is an interactive mapping tool available online at <https://arcg.is/1qzTry> to review the efforts completed to-date, which concludes with a survey tab to share your opinion on each improvement concept. The team will take your input into consideration for final planning study recommendations and potential future project(s) prioritization.

Other than small-scale safety fixes, no future funding has been identified to implement any study recommendations. A report documenting the planning study process is expected to be available [online](#) in late 2021.

Please complete the survey(s) by **October 15, 2021**. For additional project info, contact the KYTC project manager:

Casey Smith, PE
KYTC District 7
859-246-2355
Casey.Smith@ky.gov

What do YOU think about the potential improvement concepts proposed along KY 52 between Danville and Lancaster? The narrow, two-lane highway carries 5,000 vehicles per day and saw 245 crashes over five years. Review study findings at <https://arcg.is/1qzTry> then complete the survey on the far-right tab. Submit a survey for each proposed improvement (A-G). Please submit comments by **October 15, 2021**.
