**General Notes**

**SPECIFICATIONS:** All references to the Specifications are to the current edition of the Kentucky Department of Highways Standard Specifications for Road and Bridge Construction. All references to the AASHTO Specifications are to the current edition of the AASHTO LRFD Bridge Design Specifications.

**INSTALLATION PROCEDURES:** Seal the ends of the joint seal to prevent the entrance of water and foreign material.

**WELDING SPECIFICATIONS:** Ensure techniques and welding procedure comply with current joint specification ANSI/AASHTO/AWS D1.5 Bridge Welding Code.

**MATERIAL SPECIFICATIONS:** Ensure steel material is new, commercial grade steel suitable for use. Acceptance will be based on visual inspection by the Engineer. Joint sealing material, only, is in accordance with Section 857 of the Specifications. Ensure stud shear connectors conform to ASTM A108 and A38, Grade 1015.

**LOCATION:** Locate armored edges and/or expansion dams in accordance with detail plans.

**PAINTS:** Clean and paint all structural steel in accordance with the Specifications, except that no field coating will be required.

**SHOP DRAWINGS:** Contrary to the Specifications, no shop prints are required.

**BASIS OF PAYMENT:** The accepted quantities of Neoprene Expansion Dam which includes the armored edges & preformed compression joint seal will be paid for at the contract unit price per linear foot for each size, measured along centerline of joint between the vertical faces of the barriers. When only an Armored Edge is required, the cost of furnishing and placing the armored edge will be paid for at the contract unit price per linear foot, measured along the Armored Edge between the vertical faces of the barriers. Measure all armored edge from fascia to fascia of slab when used with Type II railing and no curb.
