|	
Question	In Survey Controller, can I add more than one code to a point?

Background	Codes are used to provide additional thematical information to entities such as points or lines. This additional information is used to help describe the entity and why it was measured. Examples of codes would be

- CL for centre line,
- Tr for tree,
- TP for telephone pole, etc…

Answer	**Yes** you can add more than one code to a point. Just put a comma between the codes to separate them.

In the image below I am adding the two codes **CL** and **BOC** to a point I am creating.

- Press the **Enter** button when finished.

More Than One Code, *continued*

Answer

After I pressed the **Enter** button, I see the two codes listed in the **Code** field.
