**RE:** VE# 201901  
Value Engineering Study Report – Final  
US 150 Improvement Project  
Item No. 4-396.10, .20, .30  
Nelson and Washington Counties

Dear Brent:

Transmitted herewith is an electronic copy (PDF) of the final Value Engineering Study Report for the above referenced project. In addition, attached is an electronic copy (PDF and Word) of the Implementation Form and Instructions for your use.

I appreciate your leadership and cooperation as well as that from Brad Bottoms, design team, Value Engineering study team and all other stakeholders. Should you have any questions, please contact me at (602) 493-1947.

Thank you for the opportunity to work with you and your team!

Sincerely,

**RHA, LLC**

Patrice Miller, CVS  
Managing Partner

**SECTION 1:**  
**INTRODUCTION**

**Value Engineering Study  
Kentucky Transportation Cabinet  
US 150 Improvement Project  
Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

**Section 1: Introduction**

**Value Methodology**

The value methodology (Synonyms: value analysis, value engineering and value management) is a function-oriented, systematic, team approach to add customer value to a program, facility, system, or service. Improvements like performance, quality, initial and life cycle cost are paramount in the value methodology. The workshop is conducted in accordance with the methodology as established by SAVE International, the value society, and is structured using the Job Plan as outlined as follows:

- **Stage 1: Pre-Study**

- Identify team members
- Define workshop location
- Review project documentation
- Prepare for the Value Study (Workshop)

- **Stage 2: Value Study (Workshop) Job Plan**

- *Phase 1: Information*
  - Gather, organize and analyze data
  - Define costs and cost models
  - Define the problem/purpose of the study
  - Define study scope, define project goals and workshop goals
- *Phase 2: Function Analysis*
  - Define and evaluate functions
  - Define needs versus wants
- *Phase 3: Creative*
  - What else will perform the functions?
  - Is this function required?
- *Phase 4: Evaluation*
  - Rank and rate the ideas to select
  - Refine the best ideas for further development
- *Phase 5: Development*
  - Develop the best ideas into VE Alternatives with support and justification
- *Phase 6: Presentation*
  - VE study team presents results
  - Prepare and issue the report
  - Report implementation ideas

**Value Engineering Study  
Kentucky Transportation Cabinet  
US 150 Improvement Project  
Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

- **Stage 3: Post-Study**
  - Implement approved alternatives
  - Monitor status

## Report Contents

The report provides the outcomes associated with this VE workshop and includes the following sections:

**Introduction** – This section outlines the VE process and explains the content of the report.

**Executive Summary** – This section is an overview that includes project background, summary of results, a list of the VE study team members and the VE punch list.

**VE Recommendations and Design Suggestions** – Each completed alternative and design suggestion has a separate workbook and is categorized by function. Each workbook contains the following information:

- Unique Identifying Number (XX-##)
- Creative Idea Title
- Location (see **Location Key**)
- Function Identification
- Baseline Assumption – brief description
- Proposed Alternative – brief description
- Benefits
- Risks/Challenges
- Overall Performance Score
- Cost Summary
- Baseline and Proposed Sketches, if applicable
- Discussion/Justification
- Implementation Considerations, if applicable

### LOCATION KEY

Item 4-396.10 (Nelson County)

- Alternate 1 – On Corridor
- Alternate 3 – Off Corridor

Item 4-396.20 (Washington County)

- Segment IV, Section A, Alternates 1 & 2
- Segment IV, Section B, Alternates 1 & 2
- Grundy Home Road Approach, Alternates 1 & 2

Item 4-396.30 (Washington County)

- Segment V, Section C, Alternates 1 & 2
- Segment V, Section D, Alternates 1 & 2

**Value Engineering Study  
Kentucky Transportation Cabinet  
US 150 Improvement Project  
Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

- Impact to Performance – alternative scored against **Performance Criteria** with justification for scores
- Initial Cost Detail
- Replacement/Salvage and Annual Cost Detail, if applicable

**Appendices**

- Appendix A – Study Participants
- Appendix B – Pareto Cost Models
- Appendix C – Function Analysis
- Appendix D - Creative Idea List and Evaluation
- Appendix E – Supporting Data
  - i. Team Observations
  - ii. Risk Identification
  - iii. Agenda

**PERFORMANCE CRITERIA**

**Maintain Access** - Maintain community access (residential and business) through Botland and the two KY 605 routes

**Improve Mobility** - Reduce travel time and increase the reliability (peak hours, passing opportunities, freight movement) of the corridor; improve level of service (current: D/E; goal B/C in the design year)

**Maintenance of Traffic (short-term)** - MOT during construction; need to maintain two lanes of traffic at all times during construction

**Minimize Impacts** - Minimize impacts to PACE, historic and residential properties

**SECTION 2:  
EXECUTIVE SUMMARY**

**Value Engineering Study  
Kentucky Transportation Cabinet  
US 150 Improvement Project  
Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

**Section 2: Executive Summary**

**Background**

A Value Engineering (VE) study was conducted on the preliminary design documents for the Kentucky Transportation Cabinet’s **US 150 Improvement Project (Item No. 4-396.10, .20, .30, Nelson and Washington Counties)** on February 4-7, 2019.

KYTC project manager, Brad Bottoms, and consultant representatives from Palmer Engineering and Stantec presented the project during the Information Phase kick-off meeting on Monday, February 4, 2019. A copy of this presentation is included in Section 5: Appendices, Appendix E – Supporting Data.

**Project Description** (excerpted from *Scoping Document*)

The study area encompasses US 150 corridor from the Bluegrass Parkway near Bardstown in Nelson County (Mile Point 2.334 to Mile Point 7.653 in Nelson County) to just west of Springfield in Washington County (Mile Point 0.000 to Mile Point 4.311 in Washington County). The project area is located in eastern Nelson County and western Washington County in central Kentucky. US 150 stretches approximately 120 miles from Louisville to Mount Vernon, Kentucky. Carrying between 8,800 and 12,000 vehicles per day through the project corridor, US 150 is a Rural Minor Arterial. Two-hundred thirty-four (234) crashes were reported along US 150 within the study area for a five-year period, between January, 2010 and December, 2014.

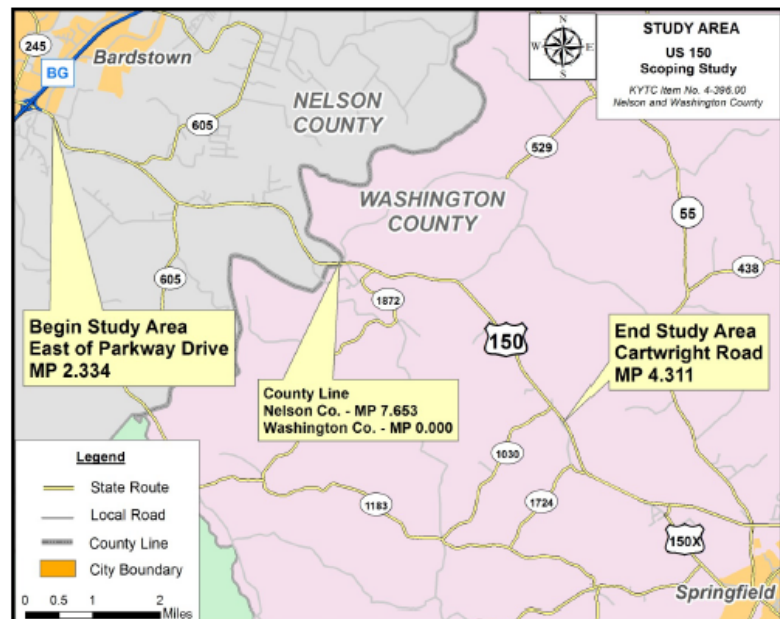

Figure 1 - Study Area - US 150 Scoping Study

**Value Engineering Study  
Kentucky Transportation Cabinet  
US 150 Improvement Project  
Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

## **Project Purpose and Need**

In the US 150 Scoping Study (December 2015), the project's Purpose and Need states:

*The purpose of the US 150 Improvement Project is to enhance local and regional mobility, increase capacity where necessary, and to provide a safer, more efficient connection between the Bluegrass Parkway and Springfield, Kentucky.*

## **Project/Workshop Constraints**

The decisions makers/stakeholders identified the project/workshop constraints for the VE study team during the Information Phase kick-off meeting as:

- Do not touch historic properties (For historic properties, a de minimis impact is one that results in a Section 106 determination of "no adverse effect" or "no historic properties affected."); sliver-taking may be acceptable
- Impact to PACE (Purchase of Agricultural Conservation Easements) properties may be limited
- "Do Nothing" is not an option for this corridor

## **Workshop Objectives**

The workshop objectives were identified at the start of the workshop and are used to the focus VE study team's efforts:

- Review typical sections
  - Constrained typical section through the Botland area due to historic and non-historic property impacts
  - Bardstown is configured as five lanes to tie into US 150 both "on" and "off" corridor
- Review connectivity to KY 605
- Identify opportunities to thread the alignment through the PACE properties
- Identify combinations of alternates that bring the project value (improve function/performance and/or lower cost)

## **Performance Criteria**

During the Information Phase, the decision makers helped the VE study team understand what defined project success for the US 150 Improvement project. Using a paired-comparison matrix, performance criteria were scored and ranked (see Section 5: Appendices, Appendix D –

**Value Engineering Study  
Kentucky Transportation Cabinet  
US 150 Improvement Project  
Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

Creative Idea List and Evaluation). These criteria were used later in the workshop by the VE study team for both evaluating and developing alternatives.

- **Maintain Access:** Maintain community access (residential and business) through Botland and the two KY 605 routes
- **Improve Mobility:** Reduce travel time and increase the reliability (peak hours, passing opportunities, freight movement) of the corridor; improve Level of Service (current: D/E; goal B/C in the design year)
- **Maintenance of Traffic (MOT) (short-term):** MOT during construction; need to maintain two lanes of traffic at all times during construction
- **Minimize Impacts:** Minimize impacts to PACE, historic and residential properties

### Summary Workshop Results

Summary workshop results are shown in the table below.

| Workshop Outcome   | Number | Section of Report / Result   |
|--|--------|--|
| Ideas Brainstormed   | 40     | See Creative Idea List (Section 5: Appendices, Appendix D)                                       |
| Ideas Developed into VE Workbooks  | 16     | See Section 4: Value Engineering Proposals and Design Suggestions                                |
| Value Engineering Proposals, costed  | 12     |  |
| Design Suggestions, not costed   | 4      |  |
| Design Comments (DC), not developed  | 5      | See Section 4: Value Engineering Proposals and Design Suggestions                                |
| ALL VE Proposals – Menu of Savings (potentially reduces initial and/or O&M cost without sacrificing function and/or performance) | 10     | \$29,748,000 – Initial Cost<br>See Section 4: Value Engineering Proposals and Design Suggestions |
| ALL VE Proposals – Menu of Added Costs (at a cost add to the project, potentially improves function and/or performance)          | 2      | (\$876,000) – Initial Cost<br>See Section 4: Value Engineering Proposals and Design Suggestions  |

Summary tables of the Value Engineering Proposals, Design Suggestions and Design Comments are included in Section 4: Value Engineering Proposals and Design Suggestions. A description and further discussion of Value Engineering Proposals and Design Suggestions are also included in Section 4: Value Engineering Proposals and Design Suggestions. The VE alternatives are categorized in one of three key (high cost and/or high risk) functions—

- Increase Capacity (IC)
- Traverse Terrain (TT)
- Enhance Roadside-safety (ER)

Nelson and Washington Counties**

## Function Analysis

Function definition and analysis is the heart of Value Engineering. It is the primary activity that separates VE from all other “improvement” programs. The objective of this phase is to ensure the entire team agrees upon the purpose of the project elements. Furthermore, this phase assists with development of the most beneficial areas for continuing the study. The data supporting the function analysis can be found in Section 5: Appendices, Appendix C.

The VE team identified the functions using active verbs and measurable nouns. This process allowed the team to truly understand all of the functions associated with the project. The basic function was defined as *Improve Level of Service*. A Random Function Identification Worksheet was completed and is included in Appendix C.

## VE Study Team

| Name            | Organization       | Role  |
|-----------------|--------------------|---|
| Shawn Russell   | KYTC               | Subject Matter Expert – Transportation      |
| Peter Overmohle | American Engineers | Subject Matter Expert – Highway Engineering |
| Jason Littleton | American Engineers | Subject Matter Expert – Traffic Engineering |
| Robert Martin   | Qk4                | Subject Matter Expert – Constructability    |
| Pat Miller      | RHA                | CVS Team Leader                             |

## Certification

This is to verify that the Value Engineering Study was conducted in accordance with standard value engineering principles and practices.

Patrice Miller, CVS®  
RHA, LLC

**Section 3: Summary Information**

**Introduction**

The VE study team brainstormed 40 ideas. To shorten the list, the VE study team members evaluated the ideas using a two-step process. The first step identified ideas that scored as follows:

- FF Unacceptable Impacts/Fatal Flaw (Has at least one fatal/unacceptable flaw)
- O/S Out of Scope
- ABC Already Being Considered
- DC Design Comment (No cost impact, no Workbook)
- DS Design Suggestions (No cost impact, Workbook)

This first-step evaluation scored the ideas as appropriate to eliminate them from further evaluation. The second step scored the remaining ideas using the Value Relationship Key (value = function/resources) along with the idea's alignment with previously identified project goals, functions and performance criteria.

Of the 40 ideas, 12 ideas were identified for further development into Value Engineering proposals, including cost impacts. The description and further discussion of these are included in the Value Engineering Workbooks section of this report.

Several of the proposals overlap or represent different ways of approaching the same issue. As a result, the savings/cost in the Summary of Alternatives table is not cumulative.

The Summary of Alternatives identifies cost impacts, initial, construction and any potential operations and maintenance (O&M). Cost savings are shown as positive costs while any added costs are noted in parenthesis. Total Life Cycle Costs are the summation of the initial plus O&M costs as estimated by the VE study team. Life Cycle Costs are based on a 50-year life.

The VE study team also developed four Design Suggestions (DS), not costed, and identified five Design Comments (DC), not developed/costed.

The following pages list the Value Engineering proposals, Design Suggestions and Design Comments in table format.

## Section 4: Value Engineering Proposals and Design Suggestions

### Introduction

The VE study team evaluated the baseline design using the Performance Criteria discussed in Section 2: Executive Summary. The results of this evaluation are shown on the following pages.

The VE study team developed 12 Value Engineering proposals, including cost impacts and four Design Suggestions (DS), not costed.

The following pages detail the Value Engineering Proposals developed as part of the study by the VE study team and include the following information:

- Unique Identifying Number (XX-##)
- Creative Idea Title
- Location (see **Location Key**)
- Function Identification
- Baseline Assumption – brief description
- Proposed Alternative – brief description
- Benefits
- Risks/Challenges
- Overall Performance Score
- Cost Summary
- Baseline and Proposed Sketches, if applicable
- Discussion/Justification
- Implementation Considerations, if applicable
- Impact to Performance – alternative scored against **Performance Criteria** with justification for scores
- Initial Cost Detail
- Replacement/Salvage and Annual Cost Detail, if applicable

#### LOCATION KEY

Item 4-396.10 (Nelson County)

- Alternate 1 – On Corridor
- Alternate 3 – Off Corridor

Item 4-396.20 (Washington County)

- Segment IV, Section A, Alternates 1 & 2
- Segment IV, Section B, Alternates 1 & 2
- Grundy Home Road Approach, Alternates 1 & 2

Item 4-396.30 (Washington County)

- Segment V, Section C, Alternates 1 & 2
- Segment V, Section D, Alternates 1 & 2

#### PERFORMANCE CRITERIA

**Maintain Access** - Maintain community access (residential and business) through Botland and the two KY 605 routes

**Improve Mobility** - Reduce travel time and increase the reliability (peak hours, passing opportunities, freight movement) of the corridor; improve level of service (current: D/E; goal B/C in the design year)

**Maintenance of Traffic (short-term)** - MOT during construction; need to maintain two lanes of traffic at all times during construction

**Minimize Impacts** - Minimize impacts to PACE, historic and residential properties

**Value Engineering Study  
Kentucky Transportation Cabinet  
US 150 Improvement Project  
Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

The costs used are those provided by Palmer Engineering. Where the VE study team has offered alternate costs, they are provided for information only, reflective of the short duration of the VE study and should be further evaluated by KYTC. Value Engineering ideas are provided for their evaluation and implementation exclusively by KYTC.

# VALUE ENGINEERING PROPOSAL

## NO. 1

Kentucky Transportation Cabinet  
 US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
 Nelson and Washington Counties

|  |  |  |                      |
|--|--|--|----------------------|
| <b>TITLE:</b>  | Reduce the paved shoulder from eight to four feet  |  |                      |
| <b>LOCATION:</b>   | Item No. 4-396.10 (Nelson County), Alternates 1 and 3; Item No. 4-396.20 (Washington County), Segment IV, Section A and B, Alternates 1 and 2; Item No. 4-396.30 (Washington County), Segment V, Section C, Alternates 1 and 2 |  |                      |
| <b>FUNCTION:</b>   | Increase Capacity  |  |                      |
| <b>BASELINE ASSUMPTION:</b>  |  |  |                      |
| The baseline shoulder condition shows an eight-foot paved shoulder with ten feet total, with graded shoulder.        |  |  |                      |
| <b>PROPOSED ALTERNATIVE:</b>   |  |  |                      |
| The proposal is to decrease the paved shoulder width to four feet paved keeping the ten feet total, graded shoulder. |  |  |                      |
| <b>BENEFITS</b>  |  | <b>RISKS/CHALLENGES</b>  |                      |
| <ul style="list-style-type: none"> <li>• Decreases pavement cost</li> </ul>  |  | <ul style="list-style-type: none"> <li>• The unpaved part of pavement shoulder could be rutted from vehicles that pull over</li> </ul> |                      |
| <ul style="list-style-type: none"> <li>•</li> </ul>  |  | <ul style="list-style-type: none"> <li>• Unsatisfactory past performance of six-foot paved shoulder within District</li> </ul>         |                      |
| <ul style="list-style-type: none"> <li>•</li> </ul>  |  | <ul style="list-style-type: none"> <li>•</li> </ul>  |                      |
| <ul style="list-style-type: none"> <li>•</li> </ul>  |  | <ul style="list-style-type: none"> <li>•</li> </ul>  |                      |

**VALUE ENGINEERING PROPOSAL**

**NO. 1**

**Kentucky Transportation Cabinet**

**US 150 Corridor Improvement, Item No. 4-396.10, .20, .30**

**Nelson and Washington Counties**

**TITLE:** Reduce the paved shoulder from eight to four feet

**SKETCH OF BASELINE ASSUMPTION**

VALUE ENGINEERING PROPOSAL

NO. 1

Kentucky Transportation Cabinet

US 150 Corridor Improvement, Item No. 4-396.10, .20, .30

Nelson and Washington Counties

TITLE: Reduce the paved shoulder from eight to four feet

SKETCH OF PROPOSED ALTERNATIVE

# VALUE ENGINEERING PROPOSAL

## NO. 1

### Kentucky Transportation Cabinet US 150 Corridor Improvement, Item No. 4-396.10, .20, .30 Nelson and Washington Counties

|   |   |
|---|---|
| <b>TITLE:</b>   | Reduce the paved shoulder from eight to four feet |
| <b>DISCUSSION/JUSTIFICATION:</b>  |   |
| <p>The baseline situation proposes eight-foot paved shoulders through all of Nelson County, Segment IV and Segment V, Section C in Washington County. Segment V, Section D in Washington County proposes an eight-foot shoulder in one direction of travel only.</p> <p>The proposal is to reduce the paved shoulder width to four-foot paved with a total of ten-foot graded (as in the baseline). The intent with this proposal is to reduce the pavement needed while still providing a graded area where vehicles could pull off in an emergency.</p> <p>The provided unit cost for mainline shoulder pavement was used to assign a cost to this proposal. The paved shoulder areas were calculated based on centerline stationing and the total outside paved shoulder width as opposed to the paved shoulder areas found in the estimates. The reduced pavement area was added back in as additional DGA/CSB to account for the addition of graded shoulder. Assuming a unit cost for CSB of \$25/ton and a unit cost for asphalt of \$75/ton, the unit cost for the additional DGA/CSB was assumed to be \$40/SqYd based on \$80/SqYd for the baseline shoulder.</p> |   |
| <b>IMPLEMENTATION CONSIDERATIONS:</b>   |   |
| None apparent.  |   |

# VALUE ENGINEERING PROPOSAL

## NO. 1

### Kentucky Transportation Cabinet US 150 Corridor Improvement, Item No. 4-396.10, .20, .30 Nelson and Washington Counties

|               |   |
|---------------|---|
| <b>TITLE:</b> | Reduce the paved shoulder from eight to four feet |
|---------------|---|

#### IMPACT TO PERFORMANCE

| Performance Attribute                       | Definition  | Weight         | Impact (use Scale) | Score        |
|---|---|----------------|--------------------|--------------|
| <b>Maintain Access</b>                      | Maintain community access (residential and business) through Botland and the two KY 605 routes  | 16.67%         | 0                  | 0.00         |
| <b>Justification</b>                        | No impact to performance. No access will change as a result of this proposal.   |                |                    |              |
| <b>Improve Mobility</b>                     | Reduce travel time and increase the reliability (peak hours, passing opportunities, freight movement) of the corridor; improve level of service (current: D/E; goal B/C in the design year) | 50.00%         | 0                  | 0.00         |
| <b>Justification</b>                        | Because the graded shoulder width is not decreased, the facility LOS will not be impacted.  |                |                    |              |
| <b>Maintenance of Traffic (short-term)*</b> | MOT during construction; need to maintain two lanes of traffic at all times during construction   | 3.00%          | -5                 | -0.15        |
| <b>Justification</b>                        | Decreasing the paved shoulder width COULD have a negative effect on MOT if working room is constrained as there would be less width for potential traffic movement.                         |                |                    |              |
| <b>Minimize Impacts</b>                     | Minimize impacts to PACE, historic and residential properties   | 33.33%         | 0                  | 0.00         |
| <b>Justification</b>                        | Impacts to right-of-way would not be impacted by this proposal as the graded shoulder width is not changing.  |                |                    |              |
| <b>OVERALL PERFORMANCE SCORE</b>            |   | <b>103.00%</b> |                    | <b>-0.15</b> |

*\*Note: Although this performance attribute did not have any weight during the initial assessment, the VE team acknowledges it is an attribute that should be considered in the performance evaluation of alternatives.*

# VALUE ENGINEERING PROPOSAL

## NO. 2

Kentucky Transportation Cabinet

US 150 Corridor Improvement, Item No. 4-396.10, .20, .30

Nelson and Washington Counties

**TITLE:** Reduce median width from 40 feet to 30 feet; Station 15+00 to Station 140+00

### SKETCH OF BASELINE ASSUMPTION

# VALUE ENGINEERING PROPOSAL

## NO. 2

Kentucky Transportation Cabinet

US 150 Corridor Improvement, Item No. 4-396.10, .20, .30

Nelson and Washington Counties

**TITLE:** Reduce median width from 40 feet to 30 feet; Station 15+00 to Station 140+00

### SKETCH OF PROPOSED ALTERNATIVE

**VALUE ENGINEERING PROPOSAL**

**NO. 2**

**Kentucky Transportation Cabinet  
US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

|  |  |
|--|--|
| <b>TITLE:</b>  | Reduce median width from 40 feet to 30 feet; Station 15+00 to Station 140+00 |
| <b>DISCUSSION/JUSTIFICATION:</b>   |  |
| <p>Reduction in median width provides cost savings in right-of-way acquisition and earthwork. A ten-foot reduction from Station 15+00 to Station 140+00 decreases right-of-way needed by 2.9 AC. At \$10,000 an acre or more, that is a cost savings of \$29,000 or more. Reducing the roadway footprint width also reduces earthwork quantities at cuts and fills. A reduction in width may work well if the project team limits access. J-turns could be utilized with limited access to provide safer through movements at approach roads. <i>(See sketch for additional concepts to consider.)</i></p> |  |
| <b>IMPLEMENTATION CONSIDERATIONS:</b>  |  |
| None apparent.   |  |

#### IMPACT TO PERFORMANCE

| Performance Attribute                       | Definition  | Weight         | Impact (use Scale) | Score       |
|---|---|----------------|--------------------|-------------|
| <b>Maintain Access</b>                      | Maintain community access (residential and business) through Botland and the two KY 605 routes  | 16.67%         | 0                  | 0.00        |
| <b>Justification</b>                        | No impact when used in conjunction with limited access.   |                |                    |             |
| <b>Improve Mobility</b>                     | Reduce travel time and increase the reliability (peak hours, passing opportunities, freight movement) of the corridor; improve level of service (current: D/E; goal B/C in the design year) | 50.00%         | 10                 | 5.00        |
| <b>Justification</b>                        | No impact when used in conjunction with limited access. Limited access improves mobility.   |                |                    |             |
| <b>Maintenance of Traffic (short-term)*</b> | MOT during construction; need to maintain two lanes of traffic at all times during construction   | 3.00%          | 0                  | 0.00        |
| <b>Justification</b>                        | No impact when used in conjunction with limited access.   |                |                    |             |
| <b>Minimize Impacts</b>                     | Minimize impacts to PACE, historic and residential properties   | 33.33%         | 5                  | 1.67        |
| <b>Justification</b>                        | Reduces right-of-way required for constructed roadway.  |                |                    |             |
| <b>OVERALL PERFORMANCE SCORE</b>            |   | <b>103.00%</b> |                    | <b>6.67</b> |

*\*Note: Although this performance attribute did not have any weight during the initial assessment, the VE team acknowledges it is an attribute that should be considered in the performance evaluation of alternatives.*

#### SCALE

- 10 Large increase in performance
- 5 Small increase in performance
- 0 No impact to performance
- 5 Small negative impact to performance
- 10 Large negative impact to performance

|---|--|--|------------------------------|
| <b>TITLE:</b>   | Replace four-lane with two-plus-one lane between KY 605 north and KY 605 south |  |                              |
| <b>LOCATION:</b>  | <b>Item No. 4-396.10 (Nelson County), Alternates 1 and 3</b>                   |  |                              |
| <b>FUNCTION:</b>  | <b>Increase Capacity</b>   |  |                              |
| <b>BASELINE ASSUMPTION:</b>   |  |  |                              |
| <p>Typical section for the "on corridor" (Alternate 1) is a four-lane with two-way left-turn-lane (TWLTL) rural, from just east of Gas Station (Station 15+00) at beginning of project to just east of KY 605 south (Station 140+00).</p> <p>Typical section for the "off corridor" (Alternate 3) is a four-lane with 40-foot depressed median from beginning to just east of KY 605 south.</p> |  |  |                              |
| <b>PROPOSED ALTERNATIVE:</b>  |  |  |                              |
| The new proposed typical section is a hybrid of a 2+1 and two-lane with a TWLTL between KY 605 north and KY 605 south.  |  |  |                              |
| <b>BENEFITS</b>   |  | <b>RISKS/CHALLENGES</b>  |                              |
| <ul style="list-style-type: none"> <li>● Reduces right-of-way and impacts to homes and businesses</li> <li>● Passing lanes in the 2+1 will help with traffic delays</li> <li>● Left turns through Botland will have refuge lane</li> <li>● Potential for reducing utility relocations</li> </ul>  |  | <ul style="list-style-type: none"> <li>● Reduction in Level of Service due to reduced number of lanes</li> <li>● Public expectations are not met</li> <li>● Maintenance of traffic is more difficult</li> <li>●</li> </ul> |                              |

**TITLE:** Replace four-lane with two-plus-one lane between KY 605 north and KY 605 south

### SKETCH OF BASELINE ASSUMPTION AND PROPOSED ALTERNATIVE ALTERNATE 1 - ON-CORRIDOR

# VALUE ENGINEERING PROPOSAL

## NO. 3

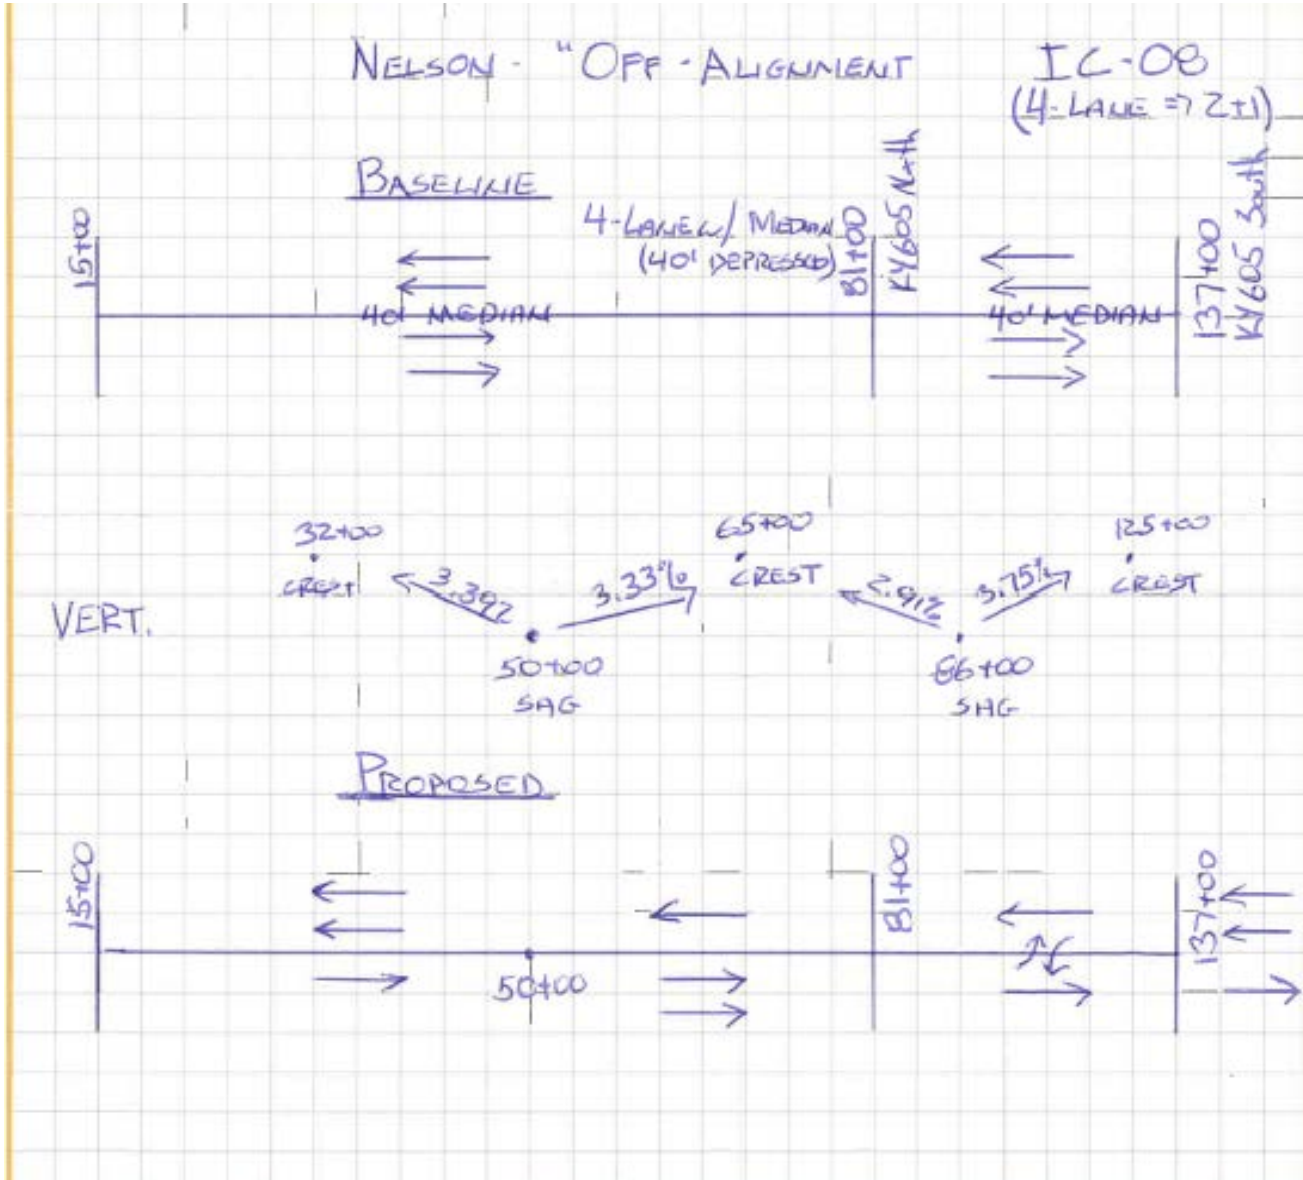

Kentucky Transportation Cabinet

US 150 Corridor Improvement, Item No. 4-396.10, .20, .30

Nelson and Washington Counties

**TITLE:** Replace four-lane with two-plus-one lane between KY 605 north and KY 605 south

### SKETCH OF BASELINE ASSUMPTION AND PROPOSED ALTERNATIVE ALTERNATE 3 - OFF-CORRIDOR

**VALUE ENGINEERING PROPOSAL**

**NO. 3**

**Kentucky Transportation Cabinet  
US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

|   |  |
|---|--|
| <b>TITLE:</b>   | Replace four-lane with two-plus-one lane between KY 605 north and KY 605 south |
| <b>DISCUSSION/JUSTIFICATION:</b>  |  |
| <p>Current traffic volumes from the beginning of the project are 12000 ADT (2014) to KY 605 North and 9000 ADT (2014) between KY 605 North and KY 605 South. Similarly, the traffic projections for the future (2035) are 19000 ADT to KY 605 North and 13000 ADT (2035) between KY 605 North and KY 605 South. Calculated V/C ratio (2035) for the proposed 2 + 1 lane configuration is = 0.58 (using a capacity of 2800 pc/hr per direction) which is under the maximum recommended ratio of 0.9. The V/C ratio (2035) for the segment between KY 605 north and KY 605 south is 0.65 with the two-lane + TWLTL.</p> <p>Right-of-way cost should be reduced due to the reduction in land. Calculated right-of-way is based on width of the reduced lane amount. The on-alignment alternative will have some added value beyond the cost per acre due to the proximity of the road to the existing homes and businesses.</p> <p>The value in cost savings due to the reduction in lanes can be accounted for during the construction phase. Cost are based on an order of magnitude for earthwork, pavement and drainage assumptions.</p> |  |
| <b>IMPLEMENTATION CONSIDERATIONS:</b>   |  |
| None apparent.  |  |

## NO. 3

### Kentucky Transportation Cabinet US 150 Corridor Improvement, Item No. 4-396.10, .20, .30 Nelson and Washington Counties

|               |  |
|---------------|--|
| <b>TITLE:</b> | Replace four-lane with two-plus-one lane between KY 605 north and KY 605 south |
|---------------|--|

#### IMPACT TO PERFORMANCE

| Performance Attribute                      | Definition  | Weight         | Impact (use Scale) | Score        |
|--|---|----------------|--------------------|--------------|
| <b>Maintain Access</b>                     | Maintain community access (residential and business) through Botland and the two KY 605 routes  | 16.67%         | 0                  | 0.00         |
| <b>Justification</b>                       | Access remains the same; no impact to performance.  |                |                    |              |
| <b>Improve Mobility</b>                    | Reduce travel time and increase the reliability (peak hours, passing opportunities, freight movement) of the corridor; improve level of service (current: D/E; goal B/C in the design year) | 50.00%         | -5                 | -2.50        |
| <b>Justification</b>                       | Reduction in LOS will occur due to the reduction in number of lanes.  |                |                    |              |
| <b>Maintenance of Traffic (short-term)</b> | MOT during construction; need to maintain two lanes of traffic at all times during construction   | 3.00%          | -5                 | -0.15        |
| <b>Justification</b>                       | Reducing the number of lanes creates difficulties in the construction and workers are closer to traffic.  |                |                    |              |
| <b>Minimize Impacts</b>                    | Minimize impacts to PACE, historic and residential properties   | 33.33%         | 5                  | 1.67         |
| <b>Justification</b>                       | A reduction in the ROW will occur due to the reduction in the typical section.  |                |                    |              |
| <b>OVERALL PERFORMANCE SCORE</b>           |   | <b>103.00%</b> |                    | <b>-0.98</b> |

*\*Note: Although this performance attribute did not have any weight during the initial assessment, the VE team acknowledges it is an attribute that should be considered in the performance evaluation of alternatives.*

#### SCALE

- 10 Large increase in performance
- 5 Small increase in performance
- 0 No impact to performance
- 5 Small negative impact to performance
- 10 Large negative impact to performance

## VALUE ENGINEERING PROPOSAL

### NO. 4

Kentucky Transportation Cabinet  
**US 150 Corridor Improvement, Item No. 4-396.10, .20, .30**  
**Nelson and Washington Counties**

|   |  |  |                      |
|---|--|--|----------------------|
| <b>TITLE:</b>   | Replace four-lane with two-lane plus auxiliary lanes at specific locations |  |                      |
| <b>LOCATION:</b>  | <b>Item No. 4-396.10 (Nelson County), Alternate 3</b>                      |  |                      |
| <b>FUNCTION:</b>  | <b>Increase Capacity</b>   |  |                      |
| <b>BASELINE ASSUMPTION:</b>   |  |  |                      |
| Typical section for the "Off-Alignment" is a four-Lane with a 40-foot depressed median from just east of Gas Station (Station 15+00) at beginning of project to just east of KY 605 south (Station 137+00). |  |  |                      |
| <b>PROPOSED ALTERNATIVE:</b>  |  |  |                      |
| The proposed typical section is a super two-lane with auxiliary lanes at specific locations.  |  |  |                      |
| <b>BENEFITS</b>   |  | <b>RISKS/CHALLENGES</b>  |                      |
| <ul style="list-style-type: none"> <li>● Reduces right-of-way and impacts to homes and businesses</li> </ul>  |  | <ul style="list-style-type: none"> <li>● Reduction in Level of Service due to reduced number of lanes</li> </ul> |                      |

## VALUE ENGINEERING PROPOSAL

### NO. 5

Kentucky Transportation Cabinet  
 US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
 Nelson and Washington Counties

|   |  |  |                      |
|---|--|--|----------------------|
| <b>TITLE:</b>   | Revise profile from Station 70+00 to Station 95+00 to improve maintenance of traffic |  |                      |
| <b>LOCATION:</b>  | <b>Item No. 4-396.10 (Nelson County), Alternate 3</b>                                |  |                      |
| <b>FUNCTION:</b>  | Traverse Terrain   |  |                      |
| <b>BASELINE ASSUMPTION:</b>   |  |  |                      |
| Profile of roadway approach to existing US 150 appears to be about five feet above existing pavement at potential tie-in point for phased construction. |  |  |                      |
| <b>PROPOSED ALTERNATIVE:</b>  |  |  |                      |
| Revise profile to better match existing pavement at this location to reduce cost of temporary tie-in and improve safety.                                |  |  |                      |
| <b>BENEFITS</b>   |  | <b>RISKS/CHALLENGES</b>                      |                      |
| • Temporary connector less costly to construct  |  | • Incremental increase in roadway excavation |                      |
| • Tie-in construction significantly faster due to less placement of embankment along roadway  |  | •  |                      |
| •   |  | •  |                      |
| •   |  | •  |                      |
| •   |  | •  |                      |
| •   |  | •  |                      |
| •   |  | •  |                      |
| <b>OVERALL PERFORMANCE SCORE</b>  |  |  |                      |
| <b>2.80</b>   |  |  |                      |
| <b>COST SUMMARY</b>   |  | <b>Initial Costs</b>                         | <b>O&amp;M Costs</b> |
| <b>BASELINE ASSUMPTION:</b>   |  | \$ 258,000                                   | \$ -                 |
| <b>PROPOSED ALTERNATIVE:</b>  |  | \$ 104,000                                   | \$ -                 |
| <b>TOTAL (Baseline less Proposed)</b>   |  | \$ 154,000                                   | \$ -                 |
|   |  | <b>SAVINGS</b>                               |                      |

# VALUE ENGINEERING PROPOSAL

## NO. 5

Kentucky Transportation Cabinet

US 150 Corridor Improvement, Item No. 4-396.10, .20, .30

Nelson and Washington Counties

**TITLE:** Revise profile from Station 70+00 to Station 95+00 to improve maintenance of traffic

### SKETCH OF BASELINE ASSUMPTION AND PROPOSED ALTERNATIVE

**VALUE ENGINEERING PROPOSAL**

**NO. 5**

**Kentucky Transportation Cabinet  
US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

|  |  |
|--|--|
| <b>TITLE:</b>  | Revise profile from Station 70+00 to Station 95+00 to improve maintenance of traffic |
| <b>DISCUSSION/JUSTIFICATION:</b>   |  |
| <p>Upon review of the potential construction sections, it is anticipated that one logical place to end construction of a phase starting at the Bluegrass Parkway is approximately Station 86+00 where the new roadway would intersect with existing US 150. However, current plans indicate there is approximately a five-foot vertical grade distance between the existing and proposed grades. If the grades are brought closer together (one-foot grade difference), the work during the traffic switch between new and existing can be expedited and costs of temporary pavement greatly reduced. Also, with the work for the tie-in being done much faster, less risk for the traveling public and the workers.</p> |  |
| <b>IMPLEMENTATION CONSIDERATIONS:</b>  |  |
| None apparent.   |  |

# VALUE ENGINEERING PROPOSAL

## NO. 6

Kentucky Transportation Cabinet  
 US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
 Nelson and Washington Counties

|  |  |   |                      |
|--|--|---|----------------------|
| <b>TITLE:</b>  | Add auxiliary lane southbound between Station 190+00 and Station 250+00 to reduce earthwork and improve Level of Service |   |                      |
| <b>LOCATION:</b>   | <b>Item No. 4-396.10 (Nelson County), Alternate 3</b>  |   |                      |
| <b>FUNCTION:</b>   | Traverse Terrain   |   |                      |
| <b>BASELINE ASSUMPTION:</b>  |  |   |                      |
| Two lanes in this portion includes westbound uphill passing lane.  |  |   |                      |
| <b>PROPOSED ALTERNATIVE:</b>   |  |   |                      |
| Same as baseline, but add eastbound down hill passing lane. This effectively becomes a four-lane undivided highway where eastbound mirrors westbound from Station 190+00 to Station 250+00. This allows passing opportunity for a mile, thus improving Level of Service. |  |   |                      |
| <b>BENEFITS</b>  |  | <b>RISKS/CHALLENGES</b>   |                      |
| <ul style="list-style-type: none"> <li>● Provides opportunity to waste 62,000 CY</li> </ul>  |  | <ul style="list-style-type: none"> <li>● Increases footprint by eight feet through cuts and fill areas</li> </ul> |                      |
| <ul style="list-style-type: none"> <li>● Provides a passing situation for eastbound traffic</li> </ul>   |  | <ul style="list-style-type: none"> <li>●</li> </ul>   |                      |
| <ul style="list-style-type: none"> <li>●</li> </ul>  |  | <ul style="list-style-type: none"> <li>●</li> </ul>   |                      |
| <ul style="list-style-type: none"> <li>●</li> </ul>  |  | <ul style="list-style-type: none"> <li>●</li> </ul>   |                      |
| <ul style="list-style-type: none"> <li>●</li> </ul>  |  | <ul style="list-style-type: none"> <li>●</li> </ul>   |                      |
| <ul style="list-style-type: none"> <li>●</li> </ul>  |  | <ul style="list-style-type: none"> <li>●</li> </ul>   |                      |
| <ul style="list-style-type: none"> <li>●</li> </ul>  |  | <ul style="list-style-type: none"> <li>●</li> </ul>   |                      |
| <b>OVERALL PERFORMANCE SCORE</b>   |  |   |                      |
| <b>5.00</b>  |  |   |                      |
| <b>COST SUMMARY</b>  |  | <b>Initial Costs</b>  | <b>O&amp;M Costs</b> |
| <b>BASELINE ASSUMPTION:</b>  |  | \$ 10,401,000   | \$ -                 |
| <b>PROPOSED ALTERNATIVE:</b>   |  | \$ 11,001,000   | \$ -                 |
| <b>TOTAL (Baseline less Proposed)</b>  |  | \$ (600,000)  | \$ -                 |

# VALUE ENGINEERING PROPOSAL

## NO. 6

Kentucky Transportation Cabinet

US 150 Corridor Improvement, Item No. 4-396.10, .20, .30

Nelson and Washington Counties

**TITLE:**

Add auxiliary lane southbound between Station 190+00 and Station 250+00 to reduce earthwork and improve Level of Service

### SKETCH OF BASELINE ASSUMPTION

# VALUE ENGINEERING PROPOSAL

## NO. 6

Kentucky Transportation Cabinet

US 150 Corridor Improvement, Item No. 4-396.10, .20, .30

Nelson and Washington Counties

TITLE:

Add auxiliary lane southbound between Station 190+00 and Station 250+00 to reduce earthwork and improve Level of Service

### SKETCH OF PROPOSED ALTERNATIVE

**VALUE ENGINEERING PROPOSAL**

**NO. 6**

**Kentucky Transportation Cabinet  
US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

|               |  |
|---------------|--|
| <b>TITLE:</b> | Add auxiliary lane southbound between Station 190+00 and Station 250+00 to reduce earthwork and improve Level of Service |
|---------------|--|

**DISCUSSION/JUSTIFICATION:**

Produces another opportunity for passing to reduce time spent following and increase capacity. An additional lane widens the footprint of the roadway by eight feet when six-foot shoulders are used. There is an additional cost in mainline pavements, but savings are likely with additional area to waste material.

Provides a passing situation for eastbound traffic and the only passing opportunity from KY 605 South in Nelson County to Grundy Home Road in Washington County, approximately 4.5 miles.

**IMPLEMENTATION CONSIDERATIONS:**

None apparent.

## VALUE ENGINEERING PROPOSAL

### NO. 7

**Kentucky Transportation Cabinet  
US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

|   |  |  |                      |
|---|--|--|----------------------|
| <b>TITLE:</b>   | Revise KY 605 alignment on east side to reduce length of approach; replace two approaches with one |  |                      |
| <b>LOCATION:</b>  | <b>Item No. 4-396.10 (Nelson County), Alternate 3</b>  |  |                      |
| <b>FUNCTION:</b>  | <b>Traverse Terrain</b>  |  |                      |
| <b>BASELINE ASSUMPTION:</b>   |  |  |                      |
| On Nelson County, Alternate 3, the KY 605 North approach ties into mainline at Station 81+00. A separate tie to existing US 150 is constructed across the Montgomery Auto Sales tract.  |  |  |                      |
| <b>PROPOSED ALTERNATIVE:</b>  |  |  |                      |
| The realigned KY 605 North would tie closer to Station 90+00 and provide an opportunity to tie to existing US 150 from the KY 605 North approach thus eliminating a connection to the proposed mainline. The intent is to connect the tie back to the Old US 150 from the KY 605 approach and have all that traffic entering the new alignment at a single point rather than two separate points. |  |  |                      |
| This realignment would require the addition of another box culvert.   |  |  |                      |
| <b>BENEFITS</b>   |  | <b>RISKS/CHALLENGES</b>  |                      |
| <ul style="list-style-type: none"> <li>● Replaces two approaches with one</li> </ul>  |  | <ul style="list-style-type: none"> <li>● Additional Reinforced Concrete Box Culvert (RCBC) would need to be constructed</li> </ul> |                      |
| <ul style="list-style-type: none"> <li>● Reduces total number of parcels and right-of-way takes</li> </ul>  |  | <ul style="list-style-type: none"> <li>● Stream impacts may require additional environmental analysis</li> </ul>                   |                      |
| <ul style="list-style-type: none"> <li>● Eliminates an approach access point</li> </ul>   |  | <ul style="list-style-type: none"> <li>● Skewed alignment at mainline intersection</li> </ul>                                      |                      |
| <ul style="list-style-type: none"> <li>● Decreases impacts to useable land and traverses unusable land</li> </ul>   |  | <ul style="list-style-type: none"> <li>● Not a direct access to Botland</li> </ul>   |                      |
| <ul style="list-style-type: none"> <li>●</li> </ul>   |  | <ul style="list-style-type: none"> <li>●</li> </ul>  |                      |

|  |  |
|--|--|
| <b>TITLE:</b>  | Revise KY 605 alignment on east side to reduce length of approach; replace two approaches with one |
| <b>DISCUSSION/JUSTIFICATION:</b>   |  |
| <p>The baseline KY 605 North alignment proposed with the Nelson County, off-corridor alternate traverses useable farmland with an approach alignment that is 1220 feet long. There is also another approach to tie to the section of US 150 remaining after construction that is 750 feet long. This baseline also assumes the acquisition of the Montgomery Auto Sales business. While the same cost is estimated for acquisition of a commercial parcel as for a residential parcel, the VE study team believes that the cost for commercial property will be higher than for residential in this area.</p> <p>This VE proposal will eliminate the need for an additional approach tie to mainline where more substantial traffic would be entering the highway as opposed to an entrance. This proposed realignment also shortens the total approach work length to 1200 feet thus reducing pavement quantities and earthwork quantities. This realignment would require the construction of an additional 10' X 8' RCBC as it traverses a stream; however, the additional cost of this structure is offset by the savings in earthwork and pavement. In lieu of acquiring the Montgomery Auto Sales parcel, this realignment would acquire a residential parcel which the VE study team believes would be a cost savings; however, this is not reflected in the detailed cost breakdown due to trying to have an "apples-to-apples" comparison between alternates.</p> <p>Costs were derived from rough design using unit costs provided to the VE study team for pavement, drainage structures and earthwork.</p> |  |
| <b>IMPLEMENTATION CONSIDERATIONS:</b>  |  |
| May impact stream greater than acceptable lengths for nationwide permit.   |  |

#### IMPACT TO PERFORMANCE

| Performance Attribute                      | Definition  | Weight         | Impact (use Scale) | Score       |
|--|---|----------------|--------------------|-------------|
| <b>Maintain Access</b>                     | Maintain community access (residential and business) through Botland and the two KY 605 routes  | 16.67%         | 0                  | 0.00        |
| <b>Justification</b>                       | Similar impact to proposed KY 605 North connection.   |                |                    |             |
| <b>Improve Mobility</b>                    | Reduce travel time and increase the reliability (peak hours, passing opportunities, freight movement) of the corridor; improve level of service (current: D/E; goal B/C in the design year) | 50.00%         | 5                  | 2.50        |
| <b>Justification</b>                       | Improves mobility by eliminating an approach tie to mainline.   |                |                    |             |
| <b>Maintenance of Traffic (short-term)</b> | MOT during construction; need to maintain two lanes of traffic at all times during construction   | 3.00%          | 0                  | 0.00        |
| <b>Justification</b>                       | Similar impact to proposed KY 605 North connection.   |                |                    |             |
| <b>Minimize Impacts</b>                    | Minimize impacts to PACE, historic and residential properties   | 33.33%         | 5                  | 1.67        |
| <b>Justification</b>                       | Acquires residential property but eliminates the need to acquire commercial property for existing US 150 tie.   |                |                    |             |
| <b>OVERALL PERFORMANCE SCORE</b>           |   | <b>103.00%</b> |                    | <b>4.17</b> |

*\*Note: Although this performance attribute did not have any weight during the initial assessment, the VE team acknowledges it is an attribute that should be considered in the performance evaluation of alternatives.*

|---------------|---|

SKETCH OF PROPOSED ALTERNATIVE

**VALUE ENGINEERING PROPOSAL**

**NO. 8**

**Kentucky Transportation Cabinet  
US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

|   |   |
|---|---|
| <b>TITLE:</b>   | Construct hybrid alignment based on revised traffic projections |
| <b>DISCUSSION/JUSTIFICATION:</b>  |   |
| <p>Consideration of a hybrid approach to alignments begins with the existing traffic volumes for the project coupled with the growth rate for the design ADT. There is an existing drop in traffic volume through the Botland area of 3200 VPD compared to volumes near the Bluegrass Parkway. If applicable, when combined with a lesser growth rate, this provides for consideration of a three-lane section on alignment through Botland between the KY 605 intersections. This combination of alignments and potential construction phases would be:</p> <ol style="list-style-type: none"><li>1) Construct <u>first phase</u> as Alternate 3 (off corridor) from the Bluegrass Parkway to alignment 9 (Station 0+00 to Station 60+00). Utilize alignment 9 to tie into existing US 150. Tie western KY 605 approach to US 150 approximately Station 91+00.</li><li>2) Construct <u>second phase</u> on corridor through Botland to eastern KY 605 intersection with a three-lane typical section.</li><li>3) Construct <u>third phase</u> to begin with new alignment just east of KY 605 and tie into Alternate 3 (off corridor) to east towards the river.</li></ol> |   |
| <b>IMPLEMENTATION CONSIDERATIONS:</b>   |   |
| None apparent.  |   |

# VALUE ENGINEERING PROPOSAL

## NO. 9

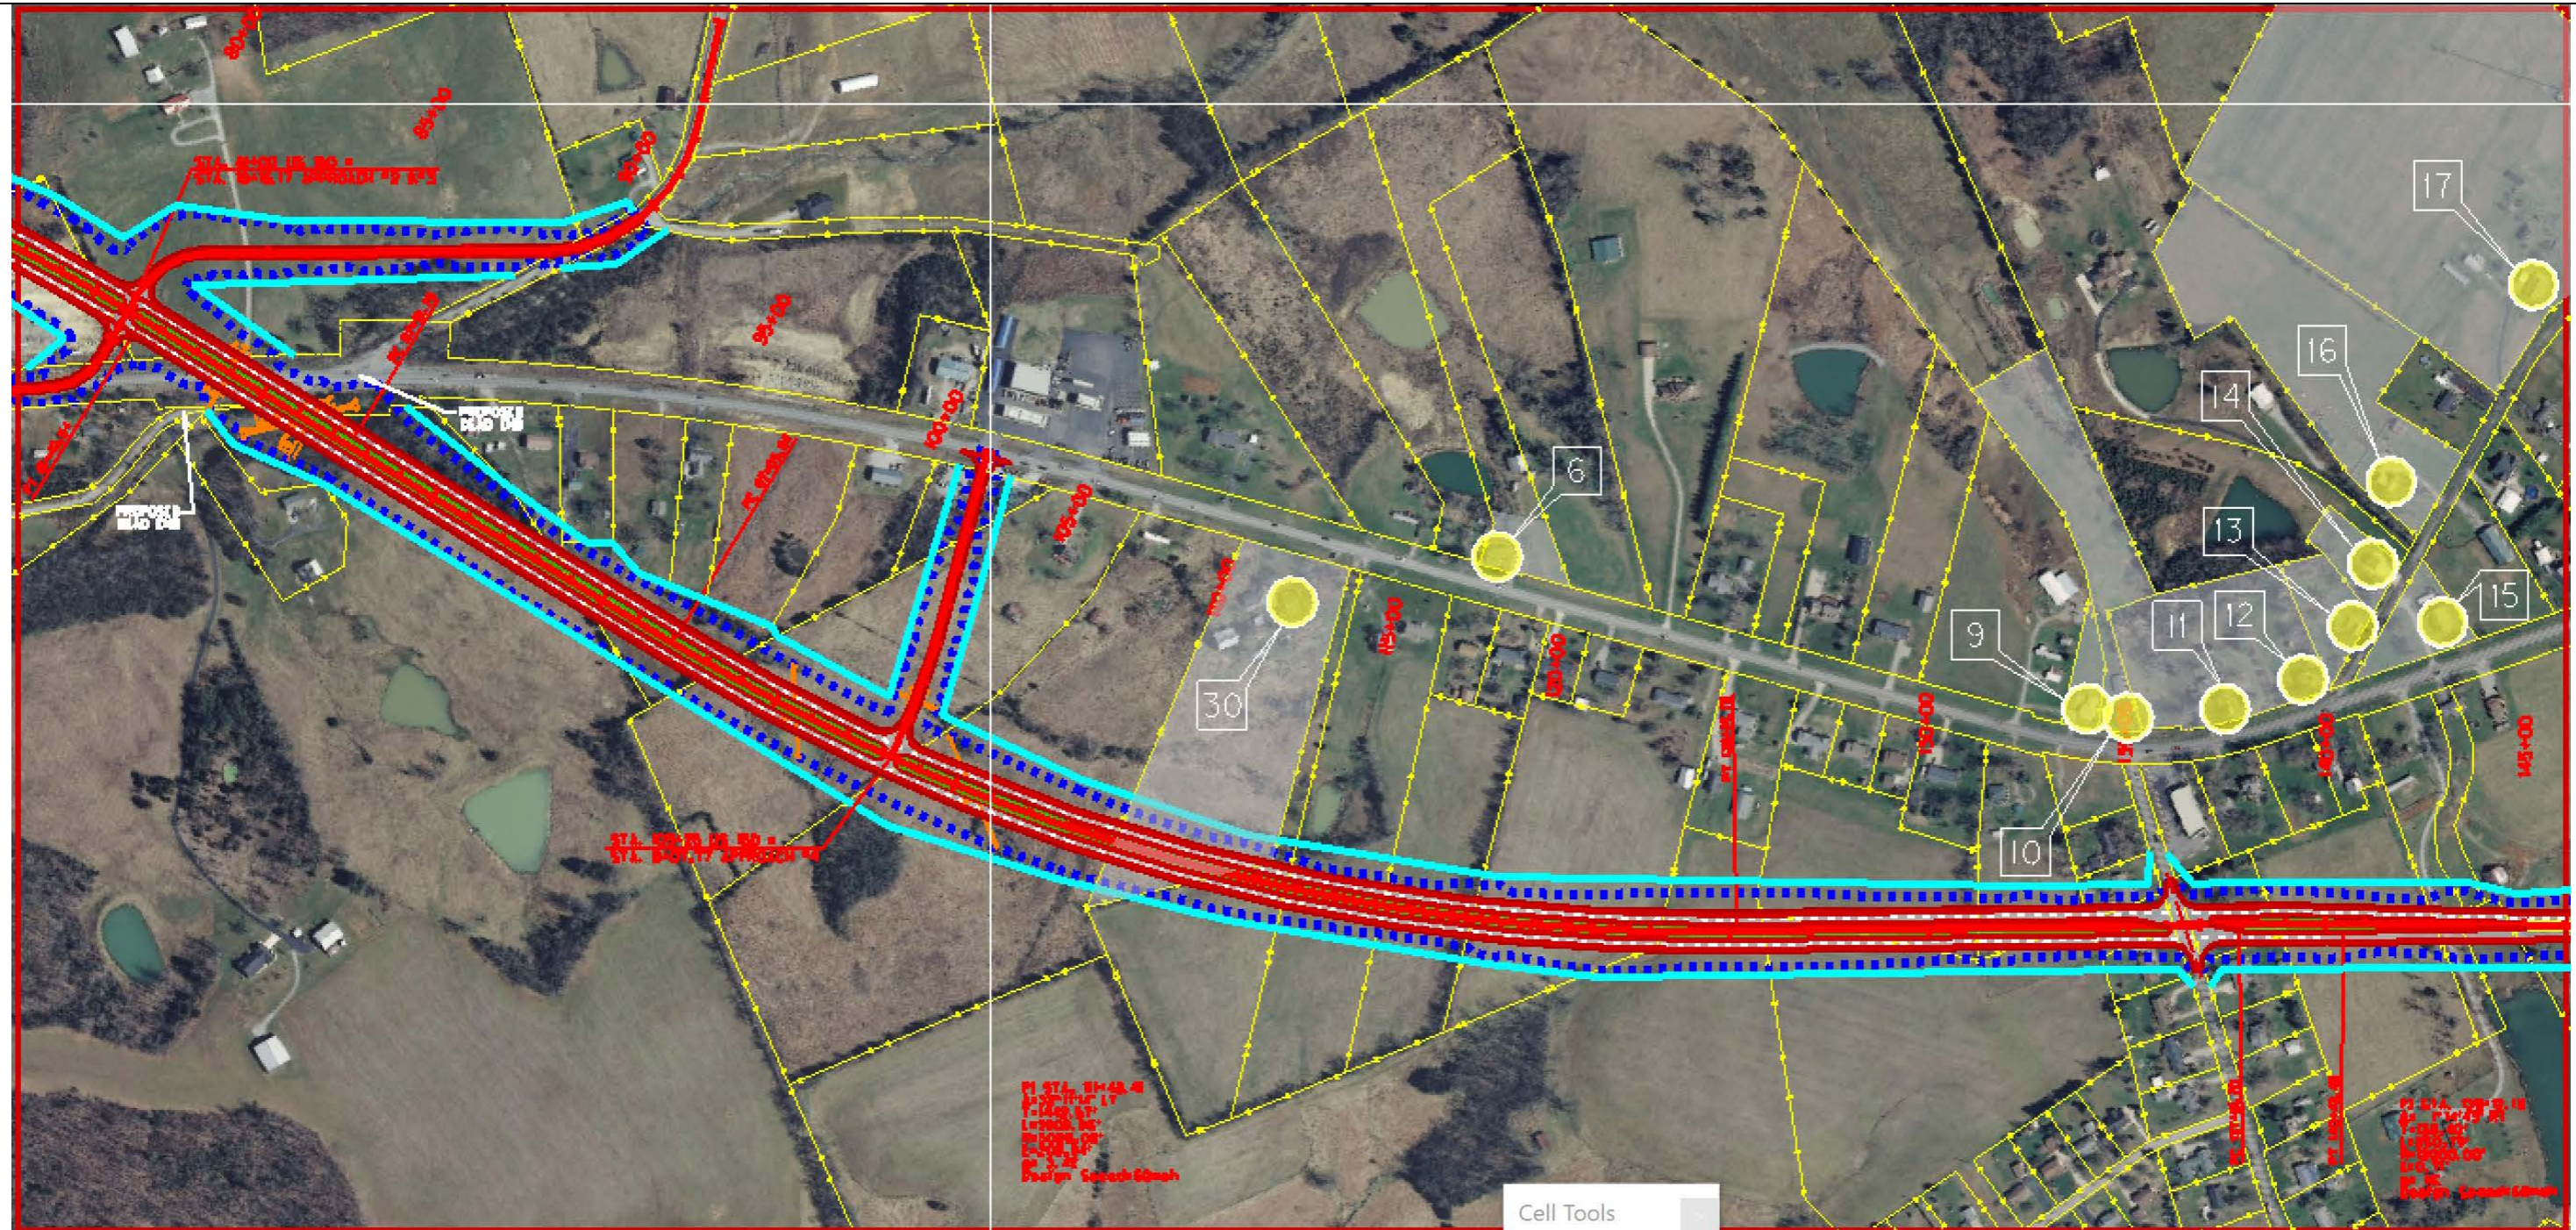

Kentucky Transportation Cabinet

US 150 Corridor Improvement, Item No. 4-396.10, .20, .30

Nelson and Washington Counties

**TITLE:** Terminate five-lane section east of KY 605 North to KY 605 South; use three-lane (two-lane + TWLTL)

### SKETCH OF BASELINE ASSUMPTION – OFF CORRIDOR

VALUE ENGINEERING PROPOSAL

NO. 9

Kentucky Transportation Cabinet

US 150 Corridor Improvement, Item No. 4-396.10, .20, .30

Nelson and Washington Counties

|               |   |
|---------------|---|
| <b>TITLE:</b> | Terminate five-lane section east of KY 605 North to KY 605 South; use three-lane (two-lane + TWLTL) |
|---------------|---|

SKETCH OF PROPOSED ALTERNATIVE – ON CORRIDOR

**VALUE ENGINEERING PROPOSAL**

**NO. 9**

**Kentucky Transportation Cabinet  
US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

|               |   |
|---------------|---|
| <b>TITLE:</b> | Terminate five-lane section east of KY 605 North to KY 605 South; use three-lane (two-lane + TWLTL) |
|---------------|---|

**DISCUSSION/JUSTIFICATION:**

Current traffic volumes are 9000 ADT (2014) or less between KY 605 North and KY 605 South. The increase in traffic is west of the KY 605 intersection. Similarly, the traffic projections for the future (2035) are 13000 ADT. Basic traffic engineering requirements allow for 17,000 ADT for a two-lane facility.

Right-of-way cost should be reduced due to the reduction in land and one storage barn acquisition. Calculated right-of-way is based on width of the reduced lane amount. The on corridor alternative will have some added value beyond the cost per acre due to the proximity of the road to the existing homes and businesses.

The value in cost savings due to the reduction in lanes can be accounted for during the construction phase. Costs are based on an order of magnitude for earthwork, pavement and drainage assumptions.

**IMPLEMENTATION CONSIDERATIONS:**

None apparent.

| <b>TITLE:</b> | Terminate five-lane section east of KY 605 North to KY 605 South; use three-lane (two-lane + TWLTL) |
|---------------|---|

#### IMPACT TO PERFORMANCE

| Performance Attribute                      | Definition  | Weight         | Impact (use Scale) | Score        |
|--|---|----------------|--------------------|--------------|
| <b>Maintain Access</b>                     | Maintain community access (residential and business) through Botland and the two KY 605 routes  | 16.67%         | 0                  | 0.00         |
| <b>Justification</b>                       | No changes to access.   |                |                    |              |
| <b>Improve Mobility</b>                    | Reduce travel time and increase the reliability (peak hours, passing opportunities, freight movement) of the corridor; improve level of service (current: D/E; goal B/C in the design year) | 50.00%         | -5                 | -2.50        |
| <b>Justification</b>                       | Some reduction in Level of Service.   |                |                    |              |
| <b>Maintenance of Traffic (short-term)</b> | MOT during construction; need to maintain two lanes of traffic at all times during construction   | 3.00%          | 5                  | 0.15         |
| <b>Justification</b>                       | Maintenance of traffic through Botland may be slightly compromised due to the minimal widening and reduced width for two lanes of traffic and working room.                                 |                |                    |              |
| <b>Minimize Impacts</b>                    | Minimize impacts to PACE, historic and residential properties   | 33.33%         | 5                  | 1.67         |
| <b>Justification</b>                       | Some reduction in right-of-way.   |                |                    |              |
| <b>OVERALL PERFORMANCE SCORE</b>           |   | <b>103.00%</b> |                    | <b>-0.68</b> |

*\*Note: Although this performance attribute did not have any weight during the initial assessment, the VE team acknowledges it is an attribute that should be considered in the performance evaluation of alternatives.*

#### SCALE

- 10 Large increase in performance
- 5 Small increase in performance
- 0 No impact to performance
- 5 Small negative impact to performance
- 10 Large negative impact to performance

## VALUE ENGINEERING PROPOSAL

### NO. 10

Kentucky Transportation Cabinet  
 US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
 Nelson and Washington Counties

|   |  |   |                      |
|---|--|---|----------------------|
| <b>TITLE:</b>   | Reduce Nelson County corridor from five-lane to two-lane with dedicated turn lanes |   |                      |
| <b>LOCATION:</b>  | <b>Item No. 4-396.10 (Nelson County), Alternate 1</b>                              |   |                      |
| <b>FUNCTION:</b>  | <b>Traverse Terrain</b>  |   |                      |
| <b>BASELINE ASSUMPTION:</b>   |  |   |                      |
| <p>The Nelson County, on corridor alternate was used as the baseline for this proposal. The on corridor alternate proposes to construct five lanes from the beginning to the southern intersection of KY 605. Three lanes are constructed from that point to the river.</p> |  |   |                      |
| <b>PROPOSED ALTERNATIVE:</b>  |  |   |                      |
| <p>Construct a two-lane facility with full paved shoulders and dedicated left-turn lanes at major intersections.</p>  |  |   |                      |
| <b>BENEFITS</b>   |  | <b>RISKS/CHALLENGES</b>   |                      |
| <ul style="list-style-type: none"> <li>• Limits impacts to historic and other properties</li> </ul>   |  | <ul style="list-style-type: none"> <li>• Increases difficulty of maintenance of traffic</li> </ul>  |                      |
| <ul style="list-style-type: none"> <li>•</li> </ul>   |  | <ul style="list-style-type: none"> <li>• Decreases Level of Service compared to baseline</li> </ul> |                      |
| <ul style="list-style-type: none"> <li>•</li> </ul>   |  | <ul style="list-style-type: none"> <li>•</li> </ul>   |                      |

Nelson and Washington Counties**

|   |  |
|---|--|
| <b>TITLE:</b>   | Reduce Nelson County corridor from five-lane to two-lane with dedicated turn lanes |
| <b>DISCUSSION/JUSTIFICATION:</b>  |  |
| <p>The baseline condition proposes a five-lane roadway near existing alignment from the interchange to the southern intersection of KY 605. The sections is predicated on an aggressive traffic growth factor of 2.2%. Assuming a lower growth factor, it may be possible to construct turn lanes in lieu of additional through lanes.</p> <p>This proposal considers dedicated left turn lanes at both KY 605 intersections. It also keeps the truck climbing lane coming into Bardstown from the river. This is based on the assumption that the KY 605 intersections have sufficient turning volume to warrant dedicated turn lanes.</p> <p>Based on input from the design team, constructing a two-lane facility off corridor was not a feasible alternative.</p> <p>The cost was estimated based on rough modeling for earthwork volumes and paving areas. Additional cost avoidance may be achieved when considering drainage structures.</p> |  |
| <b>IMPLEMENTATION CONSIDERATIONS:</b>   |  |
| None apparent.  |  |

|               |  |
|---------------|--|
| <b>TITLE:</b> | Reduce Nelson County corridor from five-lane to two-lane with dedicated turn lanes |
|---------------|--|

#### IMPACT TO PERFORMANCE

| Performance Attribute                      | Definition  | Weight         | Impact (use Scale) | Score        |
|--|---|----------------|--------------------|--------------|
| <b>Maintain Access</b>                     | Maintain community access (residential and business) through Botland and the two KY 605 routes  | 16.67%         | 0                  | 0.00         |
| <b>Justification</b>                       | No change in access is anticipated with this proposal compared to the baseline.   |                |                    |              |
| <b>Improve Mobility</b>                    | Reduce travel time and increase the reliability (peak hours, passing opportunities, freight movement) of the corridor; improve level of service (current: D/E; goal B/C in the design year) | 50.00%         | -10                | -5.00        |
| <b>Justification</b>                       | The elimination of through lanes will negatively impact mobility when compared to the baseline.   |                |                    |              |
| <b>Maintenance of Traffic (short-term)</b> | MOT during construction; need to maintain two lanes of traffic at all times during construction   | 3.00%          | -5                 | -0.15        |
| <b>Justification</b>                       | Due to the narrower width, MOT will be more difficult and will likely require revision of the baseline to perform widening, utilizing existing pavement.                                    |                |                    |              |
| <b>Minimize Impacts</b>                    | Minimize impacts to PACE, historic and residential properties   | 33.33%         | 0                  | 0.00         |
| <b>Justification</b>                       | While a narrower footprint could be used, for this proposal, the proposed right-of-way was assumed to be unchanged for future widening.   |                |                    |              |
| <b>OVERALL PERFORMANCE SCORE</b>           |   | <b>103.00%</b> |                    | <b>-5.15</b> |

*\*Note: Although this performance attribute did not have any weight during the initial assessment, the VE team acknowledges it is an attribute that should be considered in the performance evaluation of alternatives.*

#### SCALE

- 10 Large increase in performance
- 5 Small increase in performance
- 0 No impact to performance
- 5 Small negative impact to performance
- 10 Large negative impact to performance

## VALUE ENGINEERING PROPOSAL

### NO. 11

Kentucky Transportation Cabinet  
 US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
 Nelson and Washington Counties

|   |  |   |                      |
|---|--|---|----------------------|
| <b>TITLE:</b>   | Adjust horizontal curve back toward existing to minimize right-of-way impact to PACE tract |   |                      |
| <b>LOCATION:</b>  | Item No. 4-396.20 (Washington County), Segment IV, Section A, Alternates 1 and 2           |   |                      |
| <b>FUNCTION:</b>  | Traverse Terrain   |   |                      |
| <b>BASELINE ASSUMPTION:</b>   |  |   |                      |
| Using 2+1 template through the area of the PACE tract, the curve is adjusted significantly toward the PACE tract from existing radius 1145.92 feet to baseline radius 1750 feet.  |  |   |                      |
| <b>PROPOSED ALTERNATIVE:</b>  |  |   |                      |
| By adjusting the tangent by 15 minutes and utilizing a 1500-foot radius, the alignment can be pulled away from the hillside at the PC approximately 23+50 but stay closer to the existing centerline through the majority of the curve to limit impacts to the PACE parcel. |  |   |                      |
| <b>BENEFITS</b>   |  | <b>RISKS/CHALLENGES</b>   |                      |
| <ul style="list-style-type: none"> <li>• Reduces impacts to PACE parcel</li> </ul>  |  | <ul style="list-style-type: none"> <li>• Still impacts PACE parcel</li> </ul> |                      |

SKETCH OF PROPOSED ALTERNATIVE

# VALUE ENGINEERING PROPOSAL

## NO. 11

### Kentucky Transportation Cabinet US 150 Corridor Improvement, Item No. 4-396.10, .20, .30 Nelson and Washington Counties

|  |  |
|--|--|
| <b>TITLE:</b>  | Adjust horizontal curve back toward existing to minimize right-of-way impact to PACE tract |
| <b>DISCUSSION/JUSTIFICATION:</b>   |  |
| <p>The purpose of this proposal is to reduce or eliminate right-of-way takings from the parcel covered by the PACE. In investigating this proposal, one potential constraint necessitating moving away from existing in this location was determined as the tall existing cut which would result in large cuts and wide disturbed limits.</p> <p>To remedy this situation, the VE study team has proposed to adjust the baseline alignment from the beginning of Segment IV, Section A through the subject curve. An adjustment of just 0°15" in bearing will pull the centerline away from the hillside by 6 feet by the time you reach the original PC. Adjusting the horizontal radius from 1750 feet to 1500 feet will move centerline back toward existing centerline and away from the PACE tract.</p> <p>Changes to construction costs were assumed to be negligible and the main savings is in right-of-way. The necessary right-of-way from the PACE tract would decrease from 1.6ac in the baseline to 0.8ac with this proposal. The 2+1 westbound passing segment was also adjusted to end earlier in an effort to minimize impact at the existing right-of-way "pinch point" around baseline Station 27+00.</p> <p>Another possible solution to navigating the PACE issues may be to acquire any necessary area in temporary easement for the duration of construction at which time it would convert back to its agricultural purpose. From the KY Department of Agriculture's website, the PACE program is intended to "ensure that lands currently in agricultural use will continue to remain available for agriculture and not be converted to other uses." From this description it may be possible to argue that a temporary easement is not changing the use of the land.</p> <p>It should also be noted that in analyzing this proposal, it was determined that the roadway grade in the area of the superelevation transition may not be sufficient to maintain pavement drainage. It is recommended that this be looked at further as well as other areas with flat longitudinal grade (&lt;~0.75%) in the area of superelevation transition to ensure pavement drainage is maintained.</p> |  |

| None apparent.   |  |

# VALUE ENGINEERING PROPOSAL

## NO. 11

### Kentucky Transportation Cabinet US 150 Corridor Improvement, Item No. 4-396.10, .20, .30 Nelson and Washington Counties

|               |  |
|---------------|--|
| <b>TITLE:</b> | Adjust horizontal curve back toward existing to minimize right-of-way impact to PACE tract |
|---------------|--|

#### IMPACT TO PERFORMANCE

| Performance Attribute                      | Definition  | Weight         | Impact (use Scale) | Score       |
|--|---|----------------|--------------------|-------------|
| <b>Maintain Access</b>                     | Maintain community access (residential and business) through Botland and the two KY 605 routes  | 16.67%         | 0                  | 0.00        |
| <b>Justification</b>                       | No impact to performance.   |                |                    |             |
| <b>Improve Mobility</b>                    | Reduce travel time and increase the reliability (peak hours, passing opportunities, freight movement) of the corridor; improve level of service (current: D/E; goal B/C in the design year) | 50.00%         | 0                  | 0.00        |
| <b>Justification</b>                       | No impact to performance.   |                |                    |             |
| <b>Maintenance of Traffic (short-term)</b> | MOT during construction; need to maintain two lanes of traffic at all times during construction   | 3.00%          | 0                  | 0.00        |
| <b>Justification</b>                       | MOT will be made marginally more difficult; however, two-lane traffic can still be maintained during construction.  |                |                    |             |
| <b>Minimize Impacts</b>                    | Minimize impacts to PACE, historic and residential properties   | 33.33%         | 10                 | 3.33        |
| <b>Justification</b>                       | Impacts to the PACE parcel will be reduced by half, although impacts are still present.   |                |                    |             |
| <b>OVERALL PERFORMANCE SCORE</b>           |   | <b>103.00%</b> |                    | <b>3.33</b> |

*\*Note: Although this performance attribute did not have any weight during the initial assessment, the VE team acknowledges it is an attribute that should be considered in the performance evaluation of alternatives.*

#### SCALE

- 10 Large increase in performance
- 5 Small increase in performance
- 0 No impact to performance
- 5 Small negative impact to performance

VALUE ENGINEERING PROPOSAL

NO. 12

Kentucky Transportation Cabinet

US 150 Corridor Improvement, Item No. 4-396.10, .20, .30

Nelson and Washington Counties

**TITLE:** Shift bridge location northeast to allow maintenance of traffic

**SKETCH OF BASELINE ASSUMPTION AND PROPOSED ALTERNATIVE**

**VALUE ENGINEERING PROPOSAL**

**NO. 12**

**Kentucky Transportation Cabinet  
US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

|   |   |
|---|---|
| <b>TITLE:</b>   | Shift bridge location northeast to allow maintenance of traffic |
| <b>DISCUSSION/JUSTIFICATION:</b>  |   |
| <p>With no viable detour to reroute traffic around the US 150 bridge to be reconstructed over Cartwright Creek at the north end of 4-396.30, Section C, it is expected the bridge will need to be reconstructed in phases. Based on discussions with the design team, maintaining two lanes of traffic on US 150 at all times during construction is required. It is suggested consideration be given to shifting (widening) the new bridge during phase 1 to the northeast to allow for sufficient width to be constructed without impacting traffic on the existing bridge. The width of new bridge constructed during phase 1 on the northeast side needs to be at least 26.75' in width so that two lanes of traffic can be shifted to the new structure during phase 2. See example sketch for further information regarding proposed temporary lane widths. It is our understanding a 44-foot wide bridge is being proposed. This will be very difficult to build part width and maintain lane widths that can accommodate.</p> <p>It is expected that this proposal results in minimal additional costs based upon the following:</p> <ol style="list-style-type: none"><li>1) Unless the roadway at the bridge is restricted to 1 lane width during construction, traffic will need to use the shoulders temporarily to navigate around the work zone. Any additional temporary pavement needed for this is required in both the baseline option and this option.</li><li>2) This proposal fits very well with Alternate 1 (widen for truck lane to North), allowing for less temporary pavement than the Alternate 2 (symmetrical version)</li><li>3) Shift in alignment could be used to better match bridge shift or just have shoulder wider on one side.</li></ol> |   |
| <b>IMPLEMENTATION CONSIDERATIONS:</b>   |   |
| None apparent.  |   |

 Nelson and Washington Counties

|   |  |  |  |
|---|--|--|--|
| <b>TITLE:</b>   | Verify that the growth factor for traffic forecast data is accurate for design determination impacts |  |  |
| <b>LOCATION:</b>  | <b>Item No. 4-396.10 (Nelson County), Alternates 1 and 3</b>   |  |  |
| <b>FUNCTION:</b>  | <b>Increase Capacity</b>   |  |  |
| <b>BASELINE ASSUMPTION:</b>   |  |  |  |
| The growth rate used for traffic projections for this project corridor is very aggressive (2.2%/1.9% for the Nelson County sections).   |  |  |  |
| <b>PROPOSED ALTERNATIVE:</b>  |  |  |  |
| It is suggested that the Design Team revisit the growth rate used and determine if this rate is truly sustainable for 20 years. This information can be used as a tool for the development of a phased approach that better matches performance based solutions and as a budgetary tool to plan for implementation of construction phases based on performance projections. |  |  |  |
| <b>BENEFITS</b>   |  | <b>RISKS/CHALLENGES</b>  |  |
| <ul style="list-style-type: none"> <li>● Performance Based Flexible Solution (PBFS)</li> </ul>  |  | <ul style="list-style-type: none"> <li>● Growth rate prediction is not an exact science</li> </ul>                                   |  |
| <ul style="list-style-type: none"> <li>● Allows for more accurate implementation of phased approach</li> </ul>  |  | <ul style="list-style-type: none"> <li>● "If growth rate accelerates," implementation of final phases sooner than planned</li> </ul> |  |

| <p data-bbox="383 394 1154 485" style="text-align: center;"><b>Safety Evaluation of Installing Center Two-Way Left-Turn<br/>Lanes on Two-Lane Roads - See following page</b></p> |  |

## Study Details

**Study Title:** Safety Evaluation of Installing Center Two-Way Left-Turn Lanes on Two-Lane Roads

**Authors:** Persaud et al.

**Publication Date:** 2008

**Abstract:** The Federal Highway Administration organized a Pooled Fund Study of 26 States to evaluate low-cost safety strategies as part of its strategic highway safety effort. One of the strategies chosen to be evaluated for this study was the installation of center two-way left-turn lanes on two-lane roads. This strategy is intended to reduce the frequency of crashes involving a turning vehicle, which could be classified as head on or rear end. Geometric, traffic, and crash data were obtained for 78 sites (34.9 km (21.3 mi)) in North Carolina, 10 sites(9.7 km (6.0 mi)) in Illinois, 31 sites (10.95 km (6.8 mi)) in California, and 25 sites (21.25 km (13.2 mi)) in Arkansas. Empirical Bayes methods were incorporated in a before-after analysis to determine the safety effectiveness of installing the two-way left-turn lanes. There was a statistically significant reduction in total and rear-end crashes in each of four States whose installations were evaluated. Rural installations were found to be more effective in reducing crashes than urban ones in each of the four States. Lower cost installations of TWLTLs can be a cost-effective treatment for two-lane rural locations, especially those with a high frequency of rear-end collisions involving a lead vehicle desiring to make a turn.

**Study Citation:** Persaud, B., Lyon, C., Eccles, K., Lefler, N., Carter, D., and Amjadi, R., "Safety Evaluation of Installing Center Two-Way Left-Turn Lanes on Two-Lane Roads", Report No. FHWA-HRT-08-042, Federal Highway Administration, Washington, D.C., (2008)

## CMFs Associated With This Study

**Category:** Roadway

**Countermeasure:** Introduce TWLTL (two-way left turn lanes) on rural two lane roads

| CMF                  | CRF(%)             | Quality | Crash Type | Crash Severity | Roadway Type  | Area Type |

# VALUE ENGINEERING PROPOSAL

## NO. 13

### Kentucky Transportation Cabinet US 150 Corridor Improvement, Item No. 4-396.10, .20, .30 Nelson and Washington Counties

|  |  |
|--|--|
| <b>TITLE:</b>  | Verify that the growth factor for traffic forecast data is accurate for design determination impacts |
| <b>DISCUSSION/JUSTIFICATION:</b>   |  |
| <p>The growth rate from the Scoping Study for the Nelson County sections is very aggressive. At 2.2% compounded for 20 years, the current ADT of 12000 near the western end of the project jumps to 19000 in the design year. Recognizing that growth rate predictions are not an exact science, multiple factors, including available budget, are project considerations that are expected to be discussed when decisions are made on how to move forward with the project. One of the challenges is that there are capacity issues now with the two lane section currently in place with a LOS of E. While traffic may not increase as much as predicted, it is not realistic to expect the volumes to go down for the foreseeable future in this area. Also, there are several areas with accident issues, with over 65% attributable to rear end collisions or run off the road issues.</p> <p>Attached is supplemental information with a couple of exhibits that may help when working through project decisions. First, is a simple spreadsheet showing how the ADT might vary based on a range of growth rates. For instance, if a straight growth rate of 1% is used, the design year ADT drops from 19000, to just under 15000. If a staggered rate is used, assuming the 2.2% is maintained for several years than falls off to 1%, then the design ADT is at 16000. Again, the existing two lane roadway with no turn lanes does not perform very well (no build) in this situation and accident issues continue to get worse. However, using the staggered ADT approach, from a discretionary perspective, appears to have merit. While the 2.2% may be accurate, at the least it is an anomaly that does not coincide with much of the rest of the state.</p> <p>Second, attached please find a report from FHWA documenting improved performance of three lane versus two lane sections in regards to rural applications. While this is already under consideration for several sections of the project in Washington County, this may be of use if the project team determines this to be a viable option in the Botland area.</p> |  |
| <b>IMPLEMENTATION CONSIDERATIONS:</b>  |  |
| None apparent.   |  |

|  |  | <b>3.33</b>   |  |

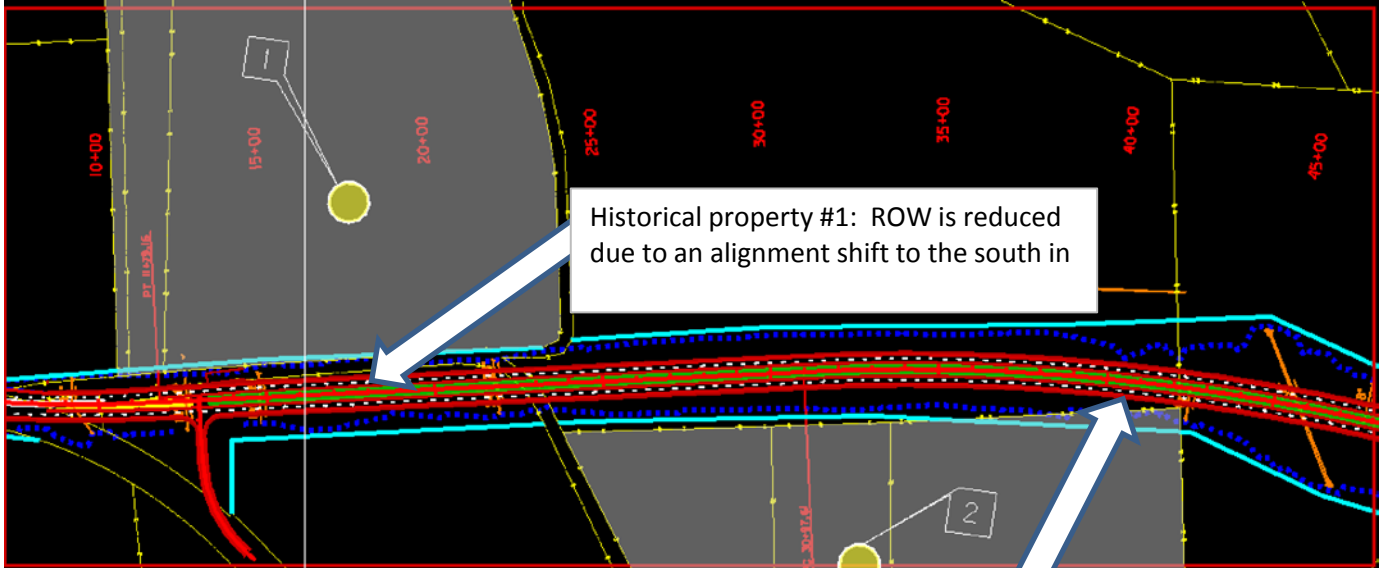

**DESIGN SUGGESTION**

**VALUE ENGINEERING PROPOSAL  
NO. 14**  
Kentucky Transportation Cabinet  
US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
Nelson and Washington Counties

**TITLE:** Shift alignment west from Station 5+00 to Station 45+00 to reduce impacts to historic properties

**SKETCH OF PROPOSED ALTERNATIVE**

Historical property #1: ROW is reduced due to an alignment shift to the south in

Historical property #2: Property is impacted slightly due to horizontal alignment shift to the south

**VALUE ENGINEERING PROPOSAL**

**NO. 14**

**Kentucky Transportation Cabinet  
US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

|   |  |
|---|--|
| <b>TITLE:</b>   | Shift alignment west from Station 5+00 to Station 45+00 to reduce impacts to historic properties |
| <b>DISCUSSION/JUSTIFICATION:</b>  |  |
| <p>The current alignment takes a relatively large section of right-of-way off the frontage of historical property #1, north of the mainline. Shifting the alignment slightly to the west and keeping it off the historical property to the south will significantly help in the right-of-way acquisition process. There are no changes to capacity, and any difference in construction cost should be insignificant.</p> <p>The sketch shows clipping a portion of historical property #2; however, the curve to the right could be shifted further east to miss this property as well.</p> |  |
| <b>IMPLEMENTATION CONSIDERATIONS:</b>   |  |
| None apparent.  |  |

|   |  | <b>OVERALL PERFORMANCE SCORE</b>  |  |
|   |  | <b>3.33</b>   |  |

**DESIGN SUGGESTION**

VALUE ENGINEERING PROPOSAL  
NO. 15  
Kentucky Transportation Cabinet  
US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
Nelson and Washington Counties

TITLE: Shift mainline alignment west at historic property #30

SKETCH OF PROPOSED ALTERNATIVE

**VALUE ENGINEERING PROPOSAL**

**NO. 15**

**Kentucky Transportation Cabinet  
US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

|   |  |
|---|--|
| <b>TITLE:</b>   | Shift mainline alignment west at historic property #30 |
| <b>DISCUSSION/JUSTIFICATION:</b>  |  |
| <p>The baseline alignment for Nelson County Alternate 3 provides two large, sweeping curves to Botland with the baseline alignment crossing existing US 150 near the intersection with the northern leg of KY 605. This crossing occurs where existing US 150 traverses between two hillsides making the maintenance of traffic difficult as the baseline shows a 4.5-foot fill over top of existing US 150.</p> <p>By adjusting the angle of the baseline crossing of existing US 150 slightly as well as using a tighter radius in the second curve, impacts to the Historic Property #30 can be avoided. Adjusting this alignment can also help to minimize property impacts to the residential properties located adjacent and in the vicinity of Historic Property #30 by traversing those parcels closer to their existing property line.</p> <p>With the revised crossing, vertical grades coming away from existing US 150 will be steeper than the baseline. This is in direct competition to maintaining traffic during construction and trying to cross existing near grade. One option to remedy this conflict would be to construct a grade separated crossing with the existing roadway. This will allow the project team to flatten grades leading to the US 150 crossing. This would also eliminate the need for the 10'x8' RCBC but would increase the impacts to the commercial and residential properties in the immediate area.</p> <p>With a grade separated crossing, no ties from proposed to existing would be constructed but the entirety of existing US 150 would remain and tie at the beginning, end and at Botland. A new tie to KY 605 North could be constructed with this proposal if it ties west of the crossing (i.e., does not cross existing US 150).</p> |  |
| <b>IMPLEMENTATION CONSIDERATIONS:</b>   |  |
| None apparent.  |  |

# VALUE ENGINEERING PROPOSAL

## NO. 16

Kentucky Transportation Cabinet

US 150 Corridor Improvement, Item No. 4-396.10, .20, .30

Nelson and Washington Counties

**TITLE:** Reduce the roadway ditch from 18 feet to 12 feet

### SKETCH OF PROPOSED ALTERNATIVE

**VALUE ENGINEERING PROPOSAL**

**NO. 16**

**Kentucky Transportation Cabinet  
US 150 Corridor Improvement, Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

|  |  |
|--|--|
| <b>TITLE:</b>  | Reduce the roadway ditch from 18 feet to 12 feet |
| <b>DISCUSSION/JUSTIFICATION:</b>   |  |
| <p>Employ foreslope utilized in Washington County Segment V of 12-foot throughout corridor. The baseline currently utilizes 18-foot foreslope for Nelson County On-Corridor, Alternate 1 and Washington County Segment IV, Sections A and B, Alternate 2. Matching the 12-foot foreslope on the corridor will narrow the footprint of the roadway reducing earthwork in cut sections and reducing potential conflicts with existing historic properties. For the baseline example shown, the reduction in foreslope from 18-foot to 12-foot would result in 260 CY less cut within a 100 FT. With just a mile of similar existing conditions in cut sections, total earthwork could be reduced by 10,000 CY.</p> |  |
| <b>IMPLEMENTATION CONSIDERATIONS:</b>  |  |
| None apparent.   |  |

**Value Engineering Study  
Kentucky Transportation Cabinet  
US 150 Improvement Project  
Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

**Appendix B – Pareto Cost Models**

Cost models (following pages) were prepared from the cost estimate data provided by Palmer Engineering. The models are organized to identify major tasks and KYTC's estimated costs of total project cost for the significant cost items. The cost models clearly illustrated the cost drivers for the project and were used to guide the VE study team during the workshop.

**Appendix C – Function Analysis**

Function definition and analysis is the heart of Value Engineering. It is the primary activity that separates VE from all other “improvement” programs. The objective of this phase is to ensure the entire team agrees upon the purposes for the project elements. Furthermore, this phase assists with development of the most beneficial areas for continuing study.

The VE study team identified the functions of the **US 150 Improvement Project** using active verbs and measurable nouns. This process allowed the team to truly understand the functions associated with the project. A Random Function Identification Worksheet is provided below.

| FUNCTION    |                  | COMMENT  | CLASSIFICATION | HIGH COST? | HIGH RISK? |
|-------------|------------------|--|----------------|------------|------------|
| Active Verb | Measureable Noun |  |                |            |            |
| Enhance     | Mobility         | <i>See Purpose and Need*</i>                           | Higher Order   |            |            |
| Improve     | Level-of-Service |  | Basic Function |            |            |
| Increase    | Capacity         | Lane quantity  | Secondary      | ✓          |            |
| Connect     | Community        |  | Secondary      |            |            |
| Convey      | Traffic          |  | Secondary      |            |            |
| Accommodate | Trucks           | Transport freight                                      | Secondary      |            |            |
| Reduce      | Crash-severity   |  | Secondary      |            |            |
| Support     | Load             | Pavement   | Secondary      | ✓          | ✓          |
| Delineate   | Lane             |  | Secondary      |            |            |
| Separate    | Traffic          | Median   | Secondary      |            |            |
| Achieve     | Geometry         |  | Secondary      | ✓          | ✓          |
| Enhance     | Roadside-safety  | Accommodate broken down and errant vehicles; shoulders | Secondary      | ✓          | ✓          |
| Establish   | Clear-zone       |  | Secondary      |            |            |
| Span        | Space            | Bridge   | Secondary      | ✓          | ✓          |
| Traverse    | Terrain          | Earthwork  | Secondary      | ✓          | ✓          |
| Convey      | Water            |  | Secondary      |            |            |
| Maintain    | Traffic          |  | Secondary      |            |            |
| Protect     | Slope            |  | Secondary      |            |            |
| Relocate    | Utilities        |  | Secondary      | ✓          | ✓          |
| Phase       | Construction     |  | Secondary      |            |            |
| Meet        | Standards        |  | Secondary      |            |            |

**Value Engineering Study  
Kentucky Transportation Cabinet  
US 150 Improvement Project  
Item No. 4-396.10, .20, .30  
Nelson and Washington Counties**

| FUNCTION    |                  | COMMENT | CLASSIFICATION | HIGH COST? | HIGH RISK? |
|-------------|------------------|---------|----------------|------------|------------|
| Active Verb | Measureable Noun |         |                |            |            |
| Acquire     | Right-of-way     |         | Secondary      | ✓          | ✓          |
| Limit       | Access           |         | Secondary      |            |            |
| Secure      | Funding          |         | Lower Order    |            |            |

High cost and/or high risk functions were identified using cost data and the VE study team expertise. The VE study team identified **Improve Level-of-Service** as the basic function of the project.

The definitions of the classifications are:

- **Higher Order Function** defines the specific goal or need for which the basic function exists and is outside the scope of the project under study.
- **Basic Function** defines the specific purpose(s) for which a project exists; it answers the question, “What must it do?”
- **Secondary Function** supports the basic function or required secondary function(s) and results for the specific design approach to achieve the basic function; answers the question, “What else do we want or does it do?”
- **Lower Order Function** is a function that is selected to initiate the project and is outside the scope of the subject under study.

**Evaluation Process**

The project decision makers identified, defined and ranked the performance attributes using a paired comparison matrix, shown below.

|   |          |   |          |          | <b>TOTAL</b> | <b>%</b>       |
|---|----------|---|----------|----------|--------------|----------------|
| <b>Maintain Access</b> - Maintain community access (residential and business) through Botland and the two KY 605 routes   | <b>A</b> | b | a        | d        | <b>1.0</b>   | <b>16.67%</b>  |
| <b>Improve Mobility</b> - Reduce travel time and increase the reliability (peak hours, passing opportunities, freight movement) of the corridor; improve level of service (current: D/E; goal B/C in the design year) | <b>B</b> | b | b        |          | <b>3.0</b>   | <b>50.00%</b>  |
| <b>Maintenance of Traffic (short-term)</b> - MOT during construction; need to maintain two lanes of traffic at all times during construction  |          |   | <b>C</b> | d        | <b>0.0</b>   | <b>3.00%</b>   |
| <b>Minimize Impacts</b> - Minimize impacts to PACE, historic and residential properties   |          |   |          | <b>D</b> | <b>2.0</b>   | <b>33.33%</b>  |
|   |          |   |          |          | <b>6.0</b>   | <b>103.00%</b> |

|     |                  |
|-----|------------------|
| a   | More Important   |
| a/b | Equal Importance |

**\*Note:** Although this performance attribute did not have any weight during the initial assessment, the VE team acknowledges it is an attribute that should be considered in the performance evaluation of alternatives.

**Value Engineering Study**  
**Kentucky Transportation Cabinet**  
**US 150 Improvement Project**  
**Item No. 4-396.10, .20, .30**  
**Nelson and Washington Counties**

The VE study team members evaluated the ideas using a two-step process. The first step, to shorten the list, identified ideas that scored as follows:

- FF Unacceptable Impacts/Fatal Flaw (Has at least one fatal/unacceptable flaw)
- O/S Out of Scope
- ABC Already Being Considered
- DC Design Comment (No cost impact, no Workbook)
- DS Design Suggestions (No cost impact, Workbook)

This first-step evaluation scored the ideas as appropriate to eliminate them from further evaluation.

The second step scored the remaining ideas using the **Value Relationship Key shown on the following page** along with the idea's alignment with previously identified project goals, functions and performance criteria. The prioritization for further development and documentation is as follows:

Score =

- 5 – Great Value meeting the criteria (Workbook)
- 4 – Good Value meeting the criteria (Workbook)
- 3 – Moderate Value meeting the criteria (No Workbook)
- 2 – Poor Value (No Workbook)

## **Appendix E – Supporting Data**

### **Team Observations**

The VE study team identified observations, concerns and opportunities to be addressed during the creative generation of potential ideas and alternatives. The following is a list of the VE study team’s observations:

- Project cost is largely focused in pavement and excavation (cut and fill); right-of-way and utility costs may also run high
- The same unit cost for excavation (\$10/CY) was used on both Nelson County, Alternate 1 (“On Corridor”) and Alternate 3 (“Off Corridor”); Alternate 1 (“On Corridor”) would be more expensive than Alternate 3 (“Off Corridor”)
- The project team does not want to widen the bridge; reconstruct instead at a cost of \$1.9 million
- Concerned that the traffic forecast data (especially for Nelson County) is driving the decision to build five lanes
- In Nelson County, south of the mainline at the bridge, there is room for waste material

### **Risk Identification**

When brainstorming alternatives during the creative phase, the VE study team considered the following risks that were identified during the Information Phase kick-off meeting:

- Unknown archaeological findings
- Unknown hazardous material findings
- Historic documents are pending approval
  - Not approved by SHPO
  - Does not allow *de minimis*
- PACE properties
  - Does not allow condemnation
  - Cannot seek solution with PACE Board
- Utilities – not in control of the process, especially “on corridor”; schedule and cost concerns
- Floodplains – unknown limits that need to be defined (not perceived to be a risk – Zone A)
- Soils conditions – degrading shale

## Value Engineering Study –Agenda

Kentucky Transportation Cabinet

### Agenda February 4-7, 2019

#### Study Location

KYTC Office, 200 Mero Street, Frankfort, KY – 1<sup>st</sup> Floor, Conference Room 109

#### Day 1: Monday, February 4, 2019

##### INFORMATION PHASE

- 9:00-9:15 Introductions (All) & Brief Overview of the VE Process (*Team Leader-Pat Miller*)
- 9:15-10:30 Project Overview, Presentation (*KYTC Project Manager Brad Bottoms, Palmer Engineering Gary Sharpe*)
- 10:30-10:45 Break
- 10:45-12:00 Project Goals & Constraints, Workshop Objectives, Identify Key Performance Attributes  
Identify Project Risks
- 12:00-1:00 Lunch
- 1:00-1:15 Review Cost Estimate / Cost Model
- 1:15-1:45 VE Team Observations

##### FUNCTION ANALYSIS PHASE

- 1:45-2:15 Function Identification of Project Elements
- 2:15-2:30 Break

##### CREATIVE PHASE

- 2:30-5:00 Brainstorm Ideas / Alternatives
- 5:00 Adjourn

#### Day 2: Tuesday, February 5, 2019

- 8:00-8:05 Check-in with VE Team

##### CREATIVE PHASE (continued)

- 8:05-10:00 Brainstorm Ideas / Alternatives
- 10:00-10:15 Break
- 10:15-12:00 Brainstorm Ideas / Alternatives
- 12:00-1:00 Lunch

##### EVALUATION PHASE

- 1:00-2:30 Evaluation of Ideas – Team Assignments for Development

##### DEVELOPMENT PHASE

- 2:30-2:45 Break
- 2:45-5:00 Develop / Cost Alternatives
- 5:00 Adjourn

**Value Engineering Study**  
**US 150 Improvement Project, Item No. 4-396**  
**Kentucky Transportation Cabinet**  
**Nelson and Washington Counties**

**Day 3: Wednesday, February 6, 2019**

8:00-8:05 Check-in with VE Team

**DEVELOPMENT PHASE**

8:05-12:00 Develop / Cost Alternatives

12:00-1:00 Lunch

1:00-5:00 Develop / Cost Alternatives

5:00 Adjourn

**Day 4: Thursday, February 7, 2019**

8:00-8:05 Check-in with VE Team

**DEVELOPMENT PHASE**

8:05-10:00 Develop / Cost Alternatives

10:00-12:00 Group Review of VE Alternatives / Prepare Presentation

12:00-1:00 Working Lunch

1:00-2:00 Presentation Run-through

2:00-3:30 Presentation of VE Alternatives / Out-brief Meeting (*Management, Stakeholders*)

3:30-4:00 Wrap-up with VE Team

4:00 Adjourn
