Developed to provide better access to crash data and help transportation professionals in Kentucky have a better understanding of safety performance. CDAT integrates crash and roadway data, allowing users to query a segment or intersection to obtain a safety score. Similar segments or intersections may then be compared. CDAT provides easy and consistent access to crash data and methodologies employing techniques from the Highway Safety Manual.

December 3, 2024

Dear Kentuckians:

My administration is working every day to create a new Kentucky home for generations to come. That's why we're making record investments in roadways across Kentucky, bringing more opportunity and progress to every community. We're completing the Kentucky section of the 1-69 corridor in the west, building the Brent Spence Companion Bridge (without tolls) in the north, and completing the Mountain Parkway expansion in the east. These three projects are making a difference in our lives, and in the lives of our kids and grandkids.

While so much progress is exciting, we need to remain safe on the roadways, so everyone can be a part of the bright future we're building together. That means Kentucky needs to be a state where we ensure safe driving practices through education, testing and enforcement. To achieve this mission, we must be transparent with information and ensure data is shared with the proper authorities and policymakers, as well as with Kentuckians. Policymakers and the public can utilize public safety information to identify investments that have worked and investments that are still needed to make our communities safer.

To create awareness and improve the safety of our citizens and roadways, today, I share with you the 2023 Kentucky Traffic Collision Facts report produced by the Kentucky State Police, which includes statistics regarding vehicular collisions that occurred on Kentucky's roadways last year.

It saddens me to report that in 2023, 814 people were killed in 767 fatal traffic collisions on Kentucky's roadways. Of these deaths, 177 were due to drivers under the influence of alcohol. Each of these individuals is a loss to our commonwealth and someone who continues to be missed by those close to them.

I want to remind all motorists, both seasoned and new, to follow these safe practices and more to keep yourselves and each other safe:

- Observe posted speed limits;
- Always wear a seatbelt;
- Never text and drive; and
- Don't operate a vehicle under the influence of drugs or alcohol.

Let's work together to make the commonwealth's roads safer to travel for all Kentuckians and those who visit this great commonwealth we call home. By working together, we move our commonwealth forward for future generations.

Sincerely,

Andy Beshear

Dear Governor Beshear:

Kentucky Revised Statutes, Chapter 189.635, mandates that Kentucky State Police collect and tabulate the traffic collision reports submitted by all law enforcement agencies across the Commonwealth.

In adherence to this statute, the Kentucky State Police is providing the 2023 Kentucky Traffic Collision Facts report. This report provides a collection of statistical data, based on comprehensive evaluation and analysis of collisions that resulted in fatalities, injuries, and property damage.

The Kentucky State Police would like to thank all law enforcement agencies that contributed data. In addition, gratitude is also extended to the Kentucky Transportation Center and University of Kentucky College of Engineering for their efforts in the completion of this report. This mutually beneficial joint effort provides Kentuckians with an account of traffic collision data, while also offering a broader analytical insight into several special interest areas.

We sincerely hope the information contained herein provides beneficial information to law enforcement agencies, as well as various other national, state, and local organizations. Most importantly, we hope this data will inspire all citizens to work with officials to create a heightened sense of highway safety across our great Commonwealth.

Respectfully submitted,

Col. Phillip Burnett, Jr.
Commissioner

All citizens of the Commonwealth of Kentucky share the sorrow brought about by senseless tragedies on our streets and highways.

**This Collision Facts Report
would like to remember the**

INTRODUCTION

Kentucky's *Traffic Collision Facts* is based on collision reports submitted to the Kentucky State Police Records Branch. As required by Kentucky Revised Statute 189.635:

"Every law enforcement agency whose officers investigate a vehicle accident of which a report must be made...shall file a report of the accident...within ten days after investigation of the accident upon forms supplied by the bureau."

The stated purpose of this requirement is to utilize data on traffic collisions to improve the Commonwealth's traffic safety program.

Unless otherwise noted, data in this publication are for public roads only. Data contained in this report are based solely on the observations and judgements of the state and local police officers who investigated each collision. Collision data are contained in an automatic system called the Collision Report Analysis for Safer Highways (CRASH). This system carries out edit checks for accuracy, which may include manual adjustments based on the Fatal Accident Reporting System (FARS).

Computer tabulations and summaries are again checked for accuracy before information is released or disseminated. It is hoped that the detailed information presented in this report will, in fact, "improve the traffic safety program within the Commonwealth."

The National Highway Traffic Safety Administration (NHTSA) *Manual on Classification of Motor Vehicle Traffic Crashes*¹ is used to ensure uniformity and compliance with federal requirements.

Standard definitions and terms used in this booklet include the following:

Motor Vehicle Traffic Collision: any motor vehicle collision that occurs on a trafficway or that occurs after the motor vehicle runs off roadway but before events are stabilized.

Collision: an unintended event that produces death, injury, or damage. The word "injury" includes "fatal injury."

Trafficway: the entire width between property lines or other boundary lines, of every way or place, of which any part is open to the public for purposes of vehicular travel as matter of right or custom.

Fatal Collision: any motor vehicle collision that results in fatal injuries to one or more persons.

Fatality: a person or persons killed in a fatal collision (also referred to as "persons killed").

Nonfatal Injury Collision: any motor vehicle collision that results in injury, other than fatal, to one or more persons (also referred to as "personal injury collision").

Injured: a person or persons injured in a collision (also referred to as "persons injured").

Property Damage Only (PDO) Collision: any motor vehicle collision in which there is no injury to any person, but only damage to a motor vehicle or other property, including injury to domestic animals.

Alcohol-Related Collision: any collision in which an operator was observed to have been drinking by the officer investigating the collision.

NOTE: Data processing methods were updated beginning with the 2019 (FY2020) publication. This may result in slight changes, but should improve the overall quality and accuracy of this report. Depending on when the data extract was received, there may be slight variances as crash information may change following crash investigations. Fatalities may be manually adjusted to match FARS following the extract but other numbers may not be adjusted. This summary comes from a snapshot of data captured in the second quarter of the year of publication following the end of the previous calendar year, which is done to ensure the data have been finalized.

FATALITIES BY AGE AND SEX

In 2023 **561** men and **249** women were killed.

14.8% of all persons killed in traffic collisions were in the **15 to 24 year old age group**.

The percentage of men or women killed in a given age group as a percentage of the total men or women killed is presented in the table to the right.

Age	Male	Female
0-14	2%	3%
15-24	14%	16%
25-34	18%	15%
35-44	16%	12%
45-54	15%	12%
55-64	14%	13%
65-74	11%	14%
75 and older	10%	14%

Slight discrepancies may exist in totals due to unknown gender or unknown age at the time a crash was coded.

The number of persons killed in fatal collisions in 2023 is shown by age and sex in the chart below.

SEVERITY OF INJURY BY COLLISION TYPE

*These totals may be higher than the actual number of pedestrians involved because they reflect multiple pedestrian actions, as up to three pedestrian factors can be coded for one collision. Slight discrepancies may exist in numbers if pedestrian flees a scene, or is otherwise coded as unidentified.

HIT-AND-RUN COLLISIONS

Hit-and-run collisions occur when the driver leaves the collision scene with the intent of evading responsibility. Hit-and-run is a serious violation of the law. In 2023 there were **12,618** hit-and-run collisions, of which **45** were fatal collisions and **995** were injury collisions.

Most of Kentucky's hit-and-run collisions were property damage collisions (**91.8%**). **45** persons were killed and **1,271** were injured.

COLLISION LOCATIONS

For the purpose of tabulating collision locations, an urban area is an area including and adjacent to a municipality or other place with a population greater than or equal to 5,000. Rural areas are places that do not meet this criterion. As shown below, most collisions (**63%**) occurred in urban areas.

61% of injury collisions occurred in urban areas, a slightly higher number of fatal collisions (**50.5%**) took place in urban areas. A much higher percentage of property damage collisions was reported in urban areas.

COLLISION LOCATION BY ROADWAY TYPE

This table shows the number of collisions by roadway type, with percentages of all collisions.

35% of all collisions occurred on Kentucky's state numbered routes, with **46%** of all fatal collisions occurring on this type of roadway.

Although **21%** of all collisions occurred on city streets, only **7%** of fatal collisions occurred on city streets.

COLLISIONS BY ROADWAY CONDITIONS AND ROADWAY CHARACTER

The charts below provide a breakdown of collisions and fatal collisions by roadway surface condition and roadway character.

The Collisions by Roadway Surface chart compares fatal collisions with all collisions for different road conditions identified by the police officer who completed the collision investigation report.

84% of all collisions occurred on straight roads and **15%** on curved roads. **31%** of fatal collisions occurred on curved roads.

TWO-VEHICLE COLLISIONS

The above chart summarizes data on the vehicular actions recorded for two-vehicle collisions, where known.

- **71,438** traffic collisions (including **254** fatal collisions) reported in 2023 were two-vehicle collisions. These collisions represented **61%** of all collisions and **33%** of fatal collisions.
- Head-on collisions accounted for **~3%** of all collisions involving two vehicles but **~38%** of fatal collisions.
- Rear-end collisions accounted for **~17%** of all two-vehicle collisions but only **~8%** of fatal collisions.
- Sideswipe collisions (both meeting and passing) made up **~22%** of all collisions and **~5%** of fatal collisions.
- Angle collisions accounted for **~32%** of all two-vehicle collisions, but represented the highest percentage of fatal collisions at nearly **43%**.

COLLISIONS BY DAY OF WEEK AND MONTH

22% of all collisions and 30% of fatal collisions occurred on weekends (Saturday and Sunday combined).

By month, **October** had the most collisions. **August** had the most fatal collisions.

The graphs below show all collisions and fatal collisions by day of occurrence (excluding unknown).

TRUCK COLLISIONS

Contributing vehicular factors, as noted by the investigating officer on the collision report, are shown below for collisions involving trucks. A truck is defined as a vehicle with a registered weight of 10,000 pounds or more. Up to two factors may be noted for each vehicle in a collision. Number represents the number of trucks for a given factor, and the percent is the percentage of all trucks for that factor. **723** truck-related factors were reported in collisions, **9** in fatal collisions, and **100** in non-fatal injury collisions.

There were **194,212** drivers involved in collisions. Of these, **1,131** were involved in fatal collisions. The chart below tabulates driver involvement by residence and shows that most drivers (~63% of those for whom the residence is known) were local residents (reside in the county where the collision occurred).

Many drivers in the **Unknown/Not Stated** category represent hit-and-run collisions where driver identities remain unknown. There may be fewer drivers than vehicles because of collisions with unoccupied vehicles (generally a parked vehicle).

DRIVER AGES (ALL COLLISIONS)

The charts below groups all traffic collisions by driver age bracket (for which age information was available).

For each age category, the following information is shown: the percentage of drivers involved in all collisions, the number of drivers involved in these collisions, the percentage of all licensed drivers, and the number of licensed drivers. This facilitates comparisons between the percentage of a given category of the driving population and the corresponding percentage for age category involved in collisions.

These data do not differentiate at-fault drivers from not-at-fault drivers.

NOTE: PERCENTAGE OF LICENSED DRIVERS IN EACH AGE CATEGORY IS BASED ON 3,916,870 DRIVERS LICENSED IN KENTUCKY. (Includes learner permits.)

DRIVER AGES (FATAL COLLISIONS)

The charts below groups all fatal traffic collisions by driver age bracket (for which age information was available). Note that the drivers were not necessarily killed in the fatal collision.

The number of drivers involved in fatal collisions may exceed the total number of fatal collisions.

For individual age categories, the percentage of the driving population can be compared to the corresponding percentage involved in fatal collisions.

NOTE: PERCENTAGE OF LICENSED DRIVERS IN EACH AGE CATEGORY IS BASED ON NUMBER OF DRIVERS LICENSED IN KENTUCKY. (Includes learner permits.)

COLLISIONS INVOLVING TEENAGE DRIVERS

The charts below compare the percentages of teenage drivers (16 to 19 years of age) involved in collisions to all other age groups. Licensed teenage drivers represent **7%** of Kentucky drivers (including learner's permits).

The number of teenage drivers involved in collisions, together with alcohol-related collisions, is shown below. Tabulations for alcohol-related collisions were derived from the total number of drinking drivers as reported by the officer at the scene. FARS would likely report higher numbers.

There were 68 fatalities in collisions involving a teenage driver (25 fatalities being the teenage driver).
There were 18 fatalities in alcohol-related collisions involving teenage drivers (12 fatalities being the teenage driver).

ALCOHOL-RELATED COLLISIONS

An alcohol-related collision is any collision where a driver was determined to have been drinking. For injury and property damage collisions, the following information gives the determination made at the scene by the investigating officer and recorded on the collision report. However, more detailed information on drinking drivers in fatal collisions is obtained from FARS, which follows up on blood alcohol content (BAC) results.

Alcohol-related collisions are listed by county beginning on page 40. The following information was adjusted to ensure consistency with FARS statistics involving fatal collisions; therefore, these numbers may not match previously listed state totals.

The total number of alcohol-related collisions is shown in the left-hand table. The number of persons killed and injured in alcohol-related collisions is listed in the right-hand table.

5% of the alcohol-related collisions were fatal, 30% were injury collisions, and 65% were property damage only.

Comparison with previous years

Alcohol-related collisions slightly **increased** in 2023 over 2022.

There were **177** persons killed, **14% more** than in 2022.

There were **1,563** persons injured in alcohol-related collisions, **a decrease of ~1%** over 2022.

Fatal collision data in the chart below were adjusted to reflect follow-up studies of alcohol test results. As a result, this table may differ from data collected at the time of the crash, which is displayed above.

The table below compares safety belt usage rates for the past five years.

Data were obtained as part of an annual observational survey conducted at sites across Kentucky.

2019	89.7%	83.7%

The table below shows vehicle occupants by injury status and separates occupants into the categories of Restraint Used and Restraint Not Used.

Overall, **9.1%** of all vehicle occupants involved in a crash were killed or injured. A breakdown by restraint usage shows only **9.8%** of those restrained were killed or injured, compared to **49.9%** of those who were not restrained.

Comparing the percentages killed or injured in the Restraint Used and Restraint Not Used categories shows the benefit of wearing a safety belt. The “Not Applicable” category includes occupants in vehicles that normally do not have safety restraints, occupants where safety restraints usage was not indicated, occupants not in an appropriate position, or pedestrians and pedalcyclists.

CONTRIBUTING FACTORS

CONTRIBUTING FACTORS — ALL COLLISIONS

Many factors and conditions contribute to collisions. **Police officers may indicate up to three driver factors for each driver, two vehicular factors for each vehicle, and up to two environmental factors for each collision.**

The table below reports the number of collisions for which a given factor was listed at least once.

+ Data were reported by KSP and may differ from FARS-adjusted data listed on page 22.

++ These numbers may be vastly underreported. It's difficult to determine how many crashes are caused by drugged driving. A reliable roadside test for drug levels in the body doesn't exist. Some drugs stay in the body for days or weeks after use, making it difficult to determine when the drug was used and, therefore, how and if it impaired driving. Police don't usually test for drugs if drivers have reached an illegal blood alcohol level because there's already enough evidence for a DUI charge. Many drivers who cause crashes are found to have both drugs and alcohol or more than one drug in their system, making it hard to know which substance had the greater effect.

REPORTING
SYSTEM
(FARS)**

FATALITY ANALYSIS REPORTING SYSTEM (FARS)

FARS is a computerized file containing data on all fatal motor vehicle traffic collisions occurring each year in the 50 states, the District of Columbia, and Puerto Rico. The system is operated by the NHTSA for the purpose of identifying safety problems, suggesting solutions, and providing an objective basis to evaluate the effectiveness of motor vehicle safety standards and highway safety countermeasures.

NHTSA has a contract with a government agency in each state for the purpose of acquiring fatal collision data. In Kentucky, this contract is with the Kentucky State Police Records Section.

For reasons of timeliness in reporting and continuity among states, FARS counts only fatalities that occur within 30 days of the collision date. FARS does not include fatalities occurring in parking lots or on private property. FARS differs from Kentucky data in that it stores data not only from the collision reports submitted from across the state, but also interfaces with many other sources to obtain additional data pertinent to collisions, vehicles, and drivers. Examples of additional data sources include vehicle registration files, driver licensing data, vital statistics, EMS reports, labs, coroners, and medical examiners. **FARS DATA CANNOT BE COMPARED DIRECTLY WITH THE PREVIOUSLY LISTED STATISTICS DUE TO THE DIFFERENCE IN REPORTING CRITERIA.**

DRIVERS INVOLVED IN FATAL COLLISIONS — AGE AND ALCOHOL INVOLVEMENT

The chart below provides the ages of all drivers in fatal collisions and alcohol-involved drivers in fatal collisions during the same time period and the percentages of involvement for different ages and age groups. Alcohol-involved teenage drivers (ages 13 through 19) represent 2% of the total number of drinking drivers involved in fatal collisions.

NOTE: Data are derived from FARS. The number of alcohol-involved drivers in FARS differs from those reported through the Kentucky Collision Reporting System because FARS follows up on alcohol test results.

*Alcohol-involved drivers refers to a driver suspected by the police of drinking and who tested positive for alcohol in a subsequent test (.01 BAC or higher).

ALCOHOL INVOLVEMENT BY AGE AND TEST RESULTS FOR DRIVERS INVOLVED IN FATAL COLLISIONS

IN 2023 **143** PERSONS WERE KILLED IN ALCOHOL-INVOLVED CRASHES.
THIS REPRESENTS **~22%** OF ALL PERSONS KILLED IN TRAFFIC COLLISIONS IN KENTUCKY.

The table below shows drinking drivers by age and alcohol test result. **80%** of the drinking drivers tested had a BAC of 0.10% or above at the time of the collision.

18% OF FATALLY INJURED PEDESTRIANS OVER THE AGE OF 15 WERE DRINKING.

THEIR AVERAGE BAC WAS **0.23**

Another traffic hazard is the drinking pedestrian. The chart on the right shows the number of fatally injured pedestrians by age and BAC test results.

The total number of pedestrians in FARS differs from the number reported through the Kentucky Collision Reporting System because FARS does not include pedestrians killed in parking lots.

SAFETY RESTRAINTS AND EJECTIONS IN FATAL COLLISIONS

The table below summarizes outcomes for fatal collisions when motorcycle helmets and other restraints (e.g., safety belts, harnesses, and child restraints) were used. Comparing the Used and Not Used categories for 2022, FARS data confirm the lifesaving advantage, as well as the reduction in serious injuries, when restraints are in place.

51% OF VEHICLE OCCUPANTS KILLED WERE NOT RESTRAINED.

26% OF VEHICLE OCCUPANTS SUFFERING A SUSPECTED/POSSIBLE INJURY WERE NOT RESTRAINED.

NON-MOTORISTS ARE NOT INCLUDED IN THE TABLES BELOW.

RESULT	MOTORCYCLE HELMET			RESTRAINT			TOTAL
	Used	Not Used	Unknown	Used	Not Used	Unknown	
(K) Killed	46	76	2	271	279	0	674
(A) Suspected Serious Injury	0	9	0	108	58	0	175
(B) Suspected Minor Injury	1	2	0	126	40	0	169

TOTAL	79	35	1,369	0	1,483

The above table summarizes outcomes for fatal collisions according to whether the vehicle occupant was ejected from the vehicle, partially ejected, or not ejected.

83% OF VEHICLE OCCUPANTS WHO WERE EITHER TOTALLY OR PARTIALLY EJECTED WERE KILLED. These data also reaffirm the lifesaving advantage of using an active restraint, since the possibility of being ejected upon impact is significantly reduced.

Motorcycles are excluded for ejections (not applicable under FARS guidelines).

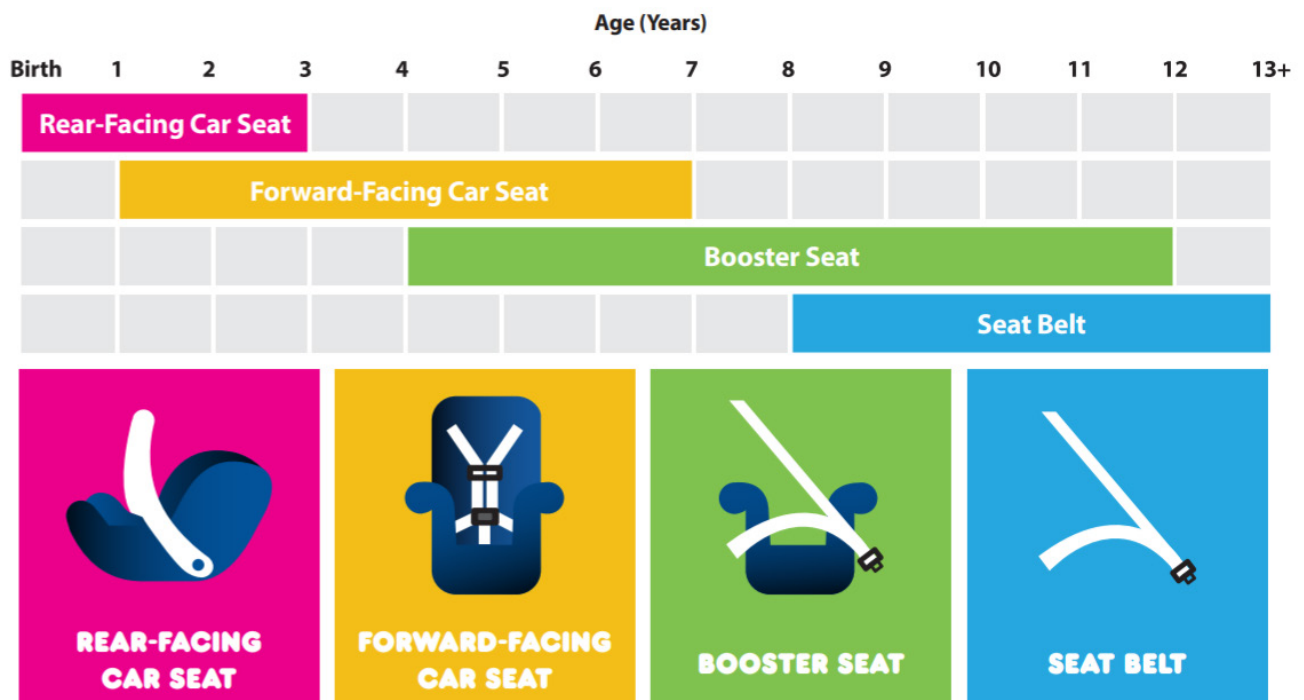

CHILD RESTRAINTS IN FATAL COLLISIONS

Kentucky's child restraint law (KRS 189.125) requires that "Any driver of a motor vehicle, when transporting a child of forty (40) inches in height or less in a motor vehicle operated on the roadways, streets, and highways of this state, shall have the child properly secured in a child restraint system of a type meeting federal motor vehicle safety standards."

To qualify, the child restraint system must be certified as having been federally approved. (Federal approval of a child restraint system is based on its having withstood dynamic crash tests involving a 30 mph collision into a fixed barrier.)

Data on child restraints summarized in the table below indicate age (4 years and under) rather than the height of the child. Other states with child restraint laws have adopted this standard in their statutes.

RESULT	AGE 4 & UNDER TOTAL	CHILD RESTRAINT USED	LAP BELT &/OR HARNESS USED	NONE USED	UNKNOWN
Killed	4	4	0	0	0
Injured (Incapacitating)	4	2	1	1	0
Injured (Non-Incapacitating)	3	2	1	0	0
Injured (Possible)	7	7	0	0	0
Not Injured	12	11	1	0	0

COST OF KENTUCKY TRAFFIC COLLISIONS

\$3.6 BILLION to \$20.3 BILLION (Estimated Economic Cost vs Estimated Comprehensive Cost)

The calculable costs (Economic Costs) of motor vehicle collisions on public roads include wage losses, medical expenses, administration costs, property damage, and employer costs. Comprehensive Costs include the Economic Cost components plus a measure of the value of lost quality of life associated with deaths and injuries.

Estimated Costs provided by the National Safety Council (Injury Facts[®]) that account for Economic and Comprehensive Costs were used to estimate a cost range for traffic collisions in Kentucky that occurred on public roads.

Costs for 2020 were used as this is the most recent available data at the time of this publication.

HEATSTROKE PREVENTION TIPS FOR PARENTS AND CAREGIVERS

Leaving a child alone in a vehicle can lead to tragedy. These deaths, while accidental, are always preventable. Here are some helpful tips to make sure it doesn't happen to your family.

REMEMBER:

- Never leave a child alone in a parked car, even with the windows rolled down or the air conditioning on. A child's body temperature can rise 3 to 5 times faster than an adult's. A core body temperature of 107 degrees is lethal.
- Always look in both the front and back of the vehicle before locking the door and walking away.
- Heatstroke can occur in temperatures as low as 57 degrees. On an 80-degree day, temperatures inside a vehicle can reach deadly levels in just 10 minutes.
- Never let children play in an unattended vehicle. Teach them a vehicle is not a play area.
- Always lock your vehicle doors and trunk, and keep the keys out of a child's reach. If a child is missing, quickly check all vehicles, including the trunk.

Come up with ways to remind yourself that a child is in your vehicle. Here are some suggestions:

- Place a briefcase, purse or cell phone next to the child's car seat so that you'll always check the back seat before leaving the car.
- Put a teddy bear in the passenger seat as reminder to check the back seat before you exit the vehicle.
- Have your childcare provider call you if your child doesn't arrive.
- Write a note and place it on the dashboard of your car, or set a reminder on your cell phone or calendar.
- If taking your child to day care is not part of your usual routine, call your spouse or another caregiver to confirm you've dropped off your child.

REMEMBER:

Kids and hot cars are a deadly combination. Don't take the chance. Look before you lock.

Look before you lock.
