

FY 2025 USDOT BUILD Truck Parking Improvement Project

Enhancing Kentucky's
Freight Network Corridors

Appendix A – Letters of Support

Andy Beshear
GOVERNOR

TRANSPORTATION CABINET

200 Mero Street
Frankfort, Kentucky 406 01

Jim Gray
SECRETARY

January 30, 2025

The Honorable Judith Kaleta
Acting Secretary of Transportation
US Department of Transportation
1200 New Jersey Avenue SE
Washington DC, 20509

Dear Acting Secretary Kaleta,

The Kentucky Transportation Cabinet (KYTC) is pleased to submit this application for a Better Utilizing Investments to Leverage Development (BUILD) Grant to fund the Truck Parking Improvement Project-Enhancing Kentucky's Freight Network Corridors. This project will include enhancements to 7 existing truck parking sites, providing an additional 368 designated truck parking along four of Kentucky's major freight corridors (I-71, I-75, I-64, and I-65).

The nation's freight network is a central element to the health of local and regional economies. The trucking industry serves as the backbone of that network performing a variety of key functions including delivering goods for retail to local communities, distributing materials from suppliers to manufacturers, and providing connectivity across other modes of transportation such as rail and air. The availability of designated truck parking is vital for a safe, efficient, and reliable freight network.

Lack of adequate truck parking can lead to trucks parking on roadway facilities such as interstate ramps and shoulders. It can worsen driver fatigue by increasing the time truck drivers spend looking for safe, designated parking needed during mandated rest periods. For many years, truck parking availability has been a national concern within the trucking industry. Kentucky has identified a clear need for additional truck parking throughout the state with the demand exceeding the supply of available parking in numerous areas across the Commonwealth.

KYTC's Truck Parking Improvement Project represents a substantial and important step in the state's efforts to improve truck parking in Kentucky by significantly increasing the number of designated truck parking spots at 7 existing sites in the Louisville, Lexington, and Northern Kentucky region. These sites represent some of the highest priority locations along the busiest freight routes in the state where the demand for truck parking significantly exceeds the available spaces. The additional parking will improve roadway safety by reducing incidents caused by trucks parking in non-designated areas and will improve the quality of life for drivers in the

trucking industry by providing better access to designated locations for resting during long-haul trips. The efficiency of the freight network will be improved by reducing travel time spent searching for adequate parking and by providing better information on available parking by adding or improving the Truck Parking Management Information Systems (TPIMS) at the expanded sites.

Truck parking plays a critical role in supporting the health of Kentucky's freight network and the state's economy. KYTC's mission is to provide a safe, efficient, environmentally sound, and fiscally responsible transportation system that delivers economic opportunity and enhances the quality of life in Kentucky. Therefore, with receipt of a BUILD grant award, KYTC is committing \$13,856,000 in federal NHPP funding and \$9,715,000 in state road funds to advance this important project. Thank you for your time and consideration of KYTC's Truck Parking Improvement Project-Enhancing Kentucky's Freight Network Corridors that will improve the safety and efficiency of freight movement through our state.

Sincerely,
DocuSigned by:

Dear Secretary Buttigieg:

I am writing to express strong support of the Kentucky Transportation Cabinet's (KYTC's) Rebuilding American Infrastructure with Sustainability and Equity (RAISE) Grant application for the Truck Parking Improvement Project-Enhancing Kentucky's Freight Network Corridors.

The nation's freight network is a central element to the health of local and regional economies. The trucking industry serves as the backbone of that network performing a variety of key functions including delivering goods for retail to local communities, distributing materials from suppliers to manufacturers, and providing connectivity across other modes of transportation such as rail and air. The availability of designated truck parking is vital for a safe, efficient, and reliable freight network.

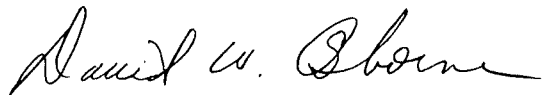

Lack of adequate truck parking can lead to trucks parking on roadway facilities such as interstate ramps and shoulders. It can worsen driver fatigue by increasing the time truck drivers spend looking for safe, designated parking needed during mandated rest periods. For many years, truck parking availability has been a national concern within the trucking industry. There is also a clear need for additional truck parking in Kentucky with the demand exceeding the supply of available parking in numerous parts of the state.

KYTC's Truck Parking Improvement Project will significantly increase the number of designated truck parking spots at sites located along the busiest freight routes in the state where the demand for truck parking significantly exceeds the available spaces. This represents a substantial and important step in the state's efforts to improve roadway safety and efficiency of the freight network in the Commonwealth.

The Honorable Pete Buttigieg

February 16, 2024

The Honorable Pete Buttigieg
US Department of Transportation
1200 New Jersey Avenue SE
Washington DC, 20590

Dear Secretary Buttigieg,

I am writing on behalf of the Boone County Fiscal Court to express our strong support of the Kentucky Transportation Cabinet's (KYTC's) Rebuilding American Infrastructure with Sustainability and Equity (RAISE) Grant application for the Truck Parking Improvement Project-Enhancing Kentucky's Freight Network Corridors.

The nation's freight network is a central element to the health of local and regional economies. The trucking industry serves as the backbone of that network performing a variety of key functions including delivering goods for retail to local communities, distributing materials from suppliers to manufacturers, and providing connectivity across other modes of transportation such as rail and air. The availability of designated truck parking is vital for a safe, efficient, and reliable freight network.

Lack of adequate truck parking can lead to trucks parking on roadway facilities such as interstate ramps. It can worsen driver fatigue by increasing the time truck drivers spend looking for safe, designated parking needed during mandated rest periods. For many years, truck parking availability has been a national concern within the truck industry. There is also a clear need for additional truck parking in Kentucky with the demand exceeding the supply of available parking in numerous parts of the state.

In Boone County, we see the impacts of truck parking – or lack of adequate parking- each and every day. In our geographical location we are able to serve the region and the nation as a logistics hub; however, the growing negative impacts are creating quality of life issues for our residents, public safety concerns and hampering additional growth. This grant would alleviate current issues while positioning the region for future expansion and positive co-existence of freight traffic within the community.

KYTC's Truck Parking Improvement Project represents a substantial and important step in the state's efforts to improve truck parking in the state by significantly increasing the number of designated truck parking spots at 6 existing sites in the Louisville, Lexington, and Northern Kentucky region. These sites represent some of the highest priority locations along the busiest freight routes in the state where the demand for truck parking significantly exceeds the available spaces. The additional parking will improve roadway safety by reducing incidents caused by trucks parking in non-designated areas and will improve the quality of life for drivers in the trucking industry by providing better access to designated locations for resting during long-haul trips. The project will also improve the efficiency of the freight network by reducing travel time spent searching for adequate parking and by providing better information on available parking with additional truck parking management information systems at the expanded sites.

Truck parking plays a central role in supporting the health of Kentucky's freight network and the state's economy. We strongly recommend that USDOT select KYTC's Truck Parking Improvement Project-Enhancing Kentucky's Freight Network Corridors for RAISE funding. Thank you for your consideration.

Jeff Noel
Secretary

February 20, 2024

The Honorable Pete Buttigieg
Secretary of Transportation
U.S. Department of Transportation
1200 New Jersey Ave, SE
Washington, D.C. 20590

Dear Secretary Buttigieg:

As Secretary of the Kentucky Cabinet for Economic Development, I am pleased to support the Kentucky Transportation Cabinet's (KYTC's) Rebuilding American Infrastructure with Sustainability and Equity (RAISE) Grant application for the Truck Parking Improvement Project-Enhancing Kentucky's Freight Network Corridors.

The nation's freight network is a central element to Kentucky's economy. With increased demand for multimodal forms of transportation, the trucking industry serves a core function in maintaining reliable supply chains for the distribution of materials and components, and delivery of goods across the manufacturing process. The availability of designated truck parking is vital for a safe, efficient, and reliable supply chain.

Lack of adequate truck parking also presents safety concerns by increasing the number of trucks parking on interstate ramps, thus worsening fatigue for those drivers searching for safe parking during mandated rest periods. KYTC has identified a clear need for additional truck parking in Kentucky with the current demand exceeding the supply of available parking in numerous parts of the state.

To this end, KYTC's Truck Parking Improvement Project represents the state's efforts to improve truck parking in the state by significantly increasing the number of designated truck parking spots at 6 existing sites in the Louisville, Lexington, and Northern Kentucky region. These sites represent Kentucky's highest priority locations along the busiest freight routes where the demand for truck parking significantly exceeds the available spaces. This project will provide greater access to safe parking and reduce the need for trucks to park in non-designated areas, thus improving the quality of life for long-haul truckers. Aside from decreasing time spent searching for safe parking, the project will also improve truck parking management information systems to provide better information on available parking at the expanded sites.

Truck parking plays a central role in supporting the health of Kentucky's freight network and the state's economy. I appreciate your consideration of KYTC's Truck Parking Improvement Project-Enhancing Kentucky's Freight Network Corridors proposal for RAISE funding. If we can answer any specific questions, please feel free to contact me.

Sincerely,

Jeff Noel
Secretary

The Honorable Pete Buttigieg
Secretary of Transportation
U.S. Department of Transportation
1200 New Jersey Ave, SE
Washington, D.C. 20590

Dear Secretary Buttigieg:

I am writing on behalf of KIPDA to express our strong support of the Kentucky Transportation Cabinet's (KYTC's) Rebuilding American Infrastructure with Sustainability and Equity (RAISE) Grant application for the Truck Parking Improvement Project-Enhancing Kentucky's Freight Network Corridors.

The nation's freight network is a central element to the health of local and regional economies. The trucking industry serves as the backbone of that network performing a variety of key functions including delivering goods for retail to local communities, distributing materials from suppliers to manufacturers, and providing connectivity across other modes of transportation such as rail and air. The availability of designated truck parking is vital for a safe, efficient, and reliable freight network.

Lack of adequate truck parking can lead to trucks parking on roadway facilities such as interstate ramps. It can worsen driver fatigue by increasing the time truck drivers spend looking for safe, designated parking needed during mandated rest periods. For many years, truck parking availability has been a national concern within the truck industry. There is also a clear need for additional truck parking in Kentucky with the demand exceeding the supply of available parking in numerous parts of the state.

KYTC's Truck Parking Improvement Project represents a substantial and important step in the state's efforts to improve truck parking in the state by significantly increasing the number of designated truck parking spots at 6 existing sites in the Louisville, Lexington, and Northern Kentucky region. These sites represent some of the highest priority locations along the busiest freight routes in the state where the demand for truck parking significantly exceeds the available spaces. The additional parking will improve roadway safety by reducing incidents caused by trucks parking in non-designated areas and will improve the quality of life for drivers in the trucking industry by providing better access to designated locations for resting during long-haul trips. The project will also improve the efficiency of the freight network by reducing travel time spent searching for adequate parking and by providing better information on available parking with additional truck parking management information systems at the expanded sites.

Truck parking plays a central role in supporting the health of the Kentucky's freight network and the state's economy. We strongly recommend that USDOT select KYTC's Truck Parking Improvement Project-Enhancing Kentucky's Freight Network Corridors for RAISE funding. Thank you for your consideration.

Sincerely,

Andy Rush, Director
Transportation Planning Division
