Introduction and Study Area

The Kentucky Transportation Cabinet (KYTC) initiated a study to evaluate an approximately 18.9-mile section of the US 127 corridor from MP 15.500 to MP 23.715 in Casey County and from MP 0.000 to MP 10.690 in Lincoln County, Kentucky. US 127 in the study area is located north of the City of Liberty and south of the City of Danville and is classified as a rural other principal arterial facility. The study corridor is shown in **Figure 1** along with the eleven evaluation segments and the ten study intersections.

The objective of the US 127 Corridor Study is to identify short-term and long-term improvements to reduce congestion and improve safety, capacity, and mobility along US 127 within the study area. This report summarizes the methodology used to develop the US 127 Corridor Study traffic forecasts.

Figure 1: US 127 Study Area Map

Traffic Forecast Type

The traffic forecast developed for the US 127 corridor addressed both total traffic and trucks for 2023 and 2045. The forecast results include:

- 2023 and 2045 Average Annual Daily Traffic (AADT) and Design Hourly Volume (DHV) volumes
- 2023 and 2045 Truck AADT and DHV volumes

Traffic Counts

KYTC provided traffic count data for the corridor, including hourly segment traffic counts. Peak period intersection turning movement counts (TMC) were obtained as part of the study in February 2023 for five study intersections. Streetlight TMC data were obtained and used for the remaining study intersections. This Streetlight data included traffic volumes from January 2021 to April 2022. Upon comparing the Collected TMC and Streetlight TMC, it was determined that the volumes are consistent.

The following list shows study intersections and the TMC data source.

1. KY 1552 (Short Town Road): Collected TMC
2. KY 1552 (Loop Road): Streetlight TMC
3. Patsy Riffe Road: Streetlight TMC
4. KY 906: Collected TMC
5. KY 78: Collected TMC
6. KY 2141/Danville Pike: Collected TMC
7. Jeffries Lane: Streetlight TMC
8. KY 1194: Collected TMC
9. Bowens Loop Road: Streetlight TMC
10. Arcadia View Drive: Streetlight TMC

Segment Counts

KYTC conducted short-term hourly counts at six locations in the study corridor. **Table 1** presents the station's location and the count results, conducted between 2009 and 2022. The counts provided hourly traffic volume data by vehicle class and direction. The raw traffic count data is provided in **Appendix A**. A graph of the hourly volumes for these six count stations is presented in **Figure 2**, which shows the AM peak from this data source is occurring between 7 and 8 am, and the PM peak is occurring between 4 and 5 pm.

Table 1: US 127 Count Station Data

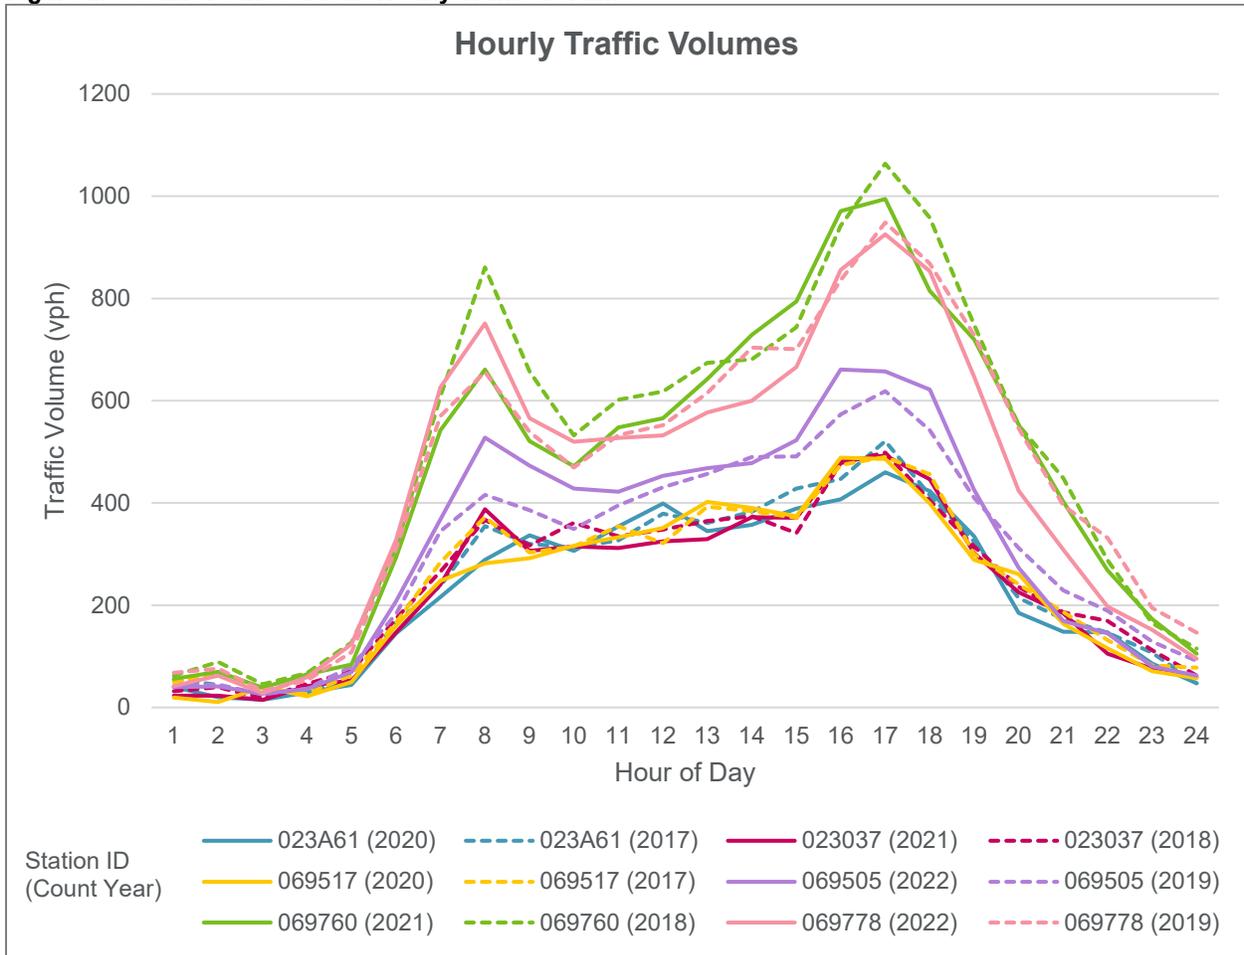

Count Station ID		023A61	023037	069517	069505	069760	069778
County		Casey		Lincoln			
Route		023-US-0127-000		069-US-0127-000			
Begin Milepoint		15.03	18.95	0	3.44	6.94	9.02
End Milepoint		18.95	22.82	3.44	6.94	9.02	10.69
K		10	10	11	10	10	9
D		57	64	56	58	57	69
Truck %	Single	8.2	8.2	8.2	5.0	5.0	5.0
	Combo	4.8	4.9	4.9	2.8	2.8	2.8
	Total	13.0	13.1	13.1	7.7	7.7	7.7
AADT	2022				6,219		9,982
	2021		5,181			9,808	
	2020	5,015		4,623			
	2019				6,357		10,437
	2018		5,192			9,703	
	2017	5,798		5,030			
	2016				6,501		10,921
	2015		5,146			9,547	
	2014	5,163		4,463			
	2013				6,126		10,023
	2012		4,754			9,466	
	2011	5,240		4,650			
2010				6,730		10,400	
2009		4,920			11,000		

Note: AADTs from 2009 to 2019 were used to estimate historical traffic growth.

Note: K factor rounded to nearest whole number

Note: K factor, D factor, and truck percentages from prior to 2022 used.

Figure 2: US 127 Count Stations Hourly Traffic Volumes

A comparison was made between the 2020, 2021 and 2022 counts and the previous years to determine if changes in travel patterns and volumes were impacted significantly by the COVID-19 pandemic. The 2020 AADT volume at station 023A61 was 14% lower than the 2017 count and 2020 AADT volume at station 069517 was 8% lower than the 2017 count. This difference showed that travel pattern changes during the COVID-19 pandemic had a significant impact on traffic in the study area.

The 24-hour volume counts conducted at count stations 069505 and 069778 in 2022 were used to check if volumes had returned back to pre-pandemic levels. These indicated that volumes post-2020 had approximately returned back to pre-pandemic values at count station 069505. In 2019, an AADT of 6,357 was recorded at this station, while in 2022 the AADT decreased to 6,219, resulting in a slight decrease of 2%. Station 069778 had slightly lower volume in 2022 (AADT of 9,982) compared to pre-pandemic years (AADT of 10,437 was recorded in 2019). This reduction in AADT is associated with observed decreasing rates of volume at this station since 2004 with an annual rate of -1.1% and is probably not related to the COVID-19 pandemic.

Intersection Counts

To evaluate intersection-level traffic operations and to confirm the design hour volumes from the segment counts it was necessary to collect intersection turning movement counts at the ten study intersections. The turning movement volumes are shown in **Figure 5** (rounded to the nearest ten vehicles per hour (vph)).

These counts were used to develop the 2023 design hour volumes. An evaluation of these 2023 intersection counts indicated they were consistent with expectations based on historical traffic volumes. **Appendix B** provides the detailed intersection turning movement count data.

Traffic Growth Rates

2023 was selected as the baseline year for analysis due to recent intersection counts being available for comparison and the planning study will be finalized in 2023. 2045 was selected as the design year. The growth rate for the study area was determined by comparing the results from three independent assessments:

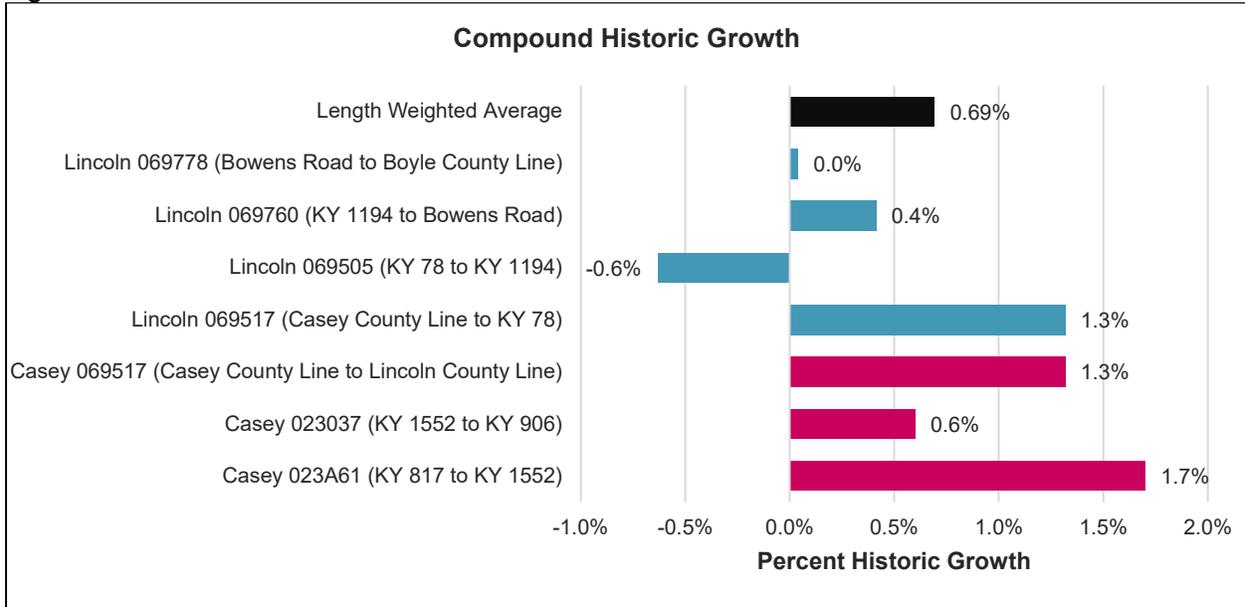

1. Reviewing historical traffic counts for growth trends
2. Analyzing results from the KYTC statewide model – KYSTMv19 with 6,003 zones.
3. Examining the expected population growth in Casey and Lincoln Counties, Kentucky.

Historical Traffic Count Trends

Historical AADT information was obtained from KYTC for count stations in the corridor study area. The data included the basic volume numbers as well as supporting information such as heavy vehicle percentages, directional distribution, design hour factor (K factor), and hourly count data. The traffic count data from the most recent 10 years prior to COVID-19 (2020) was used to estimate the historical growth trends since post 2019 counts were slightly lower than previous counts. This resulted in using volume data from 2009 to 2019.

As shown in **Figure 3**, the maximum traffic growth occurred at Station 023A61 (KY 817 to KY 1552) with a 1.7% increase per year, and the minimum traffic growth happened at Station 069505 (KY 78 to KY 1194) with a 0.6% reduction per year. The resulting length weighted average traffic growth for this time period within the study area is 0.69% (length weighting means that a longer count station segment is weighted proportionately more than a shorter segment).

Figure 3: Historical Growth on US 127

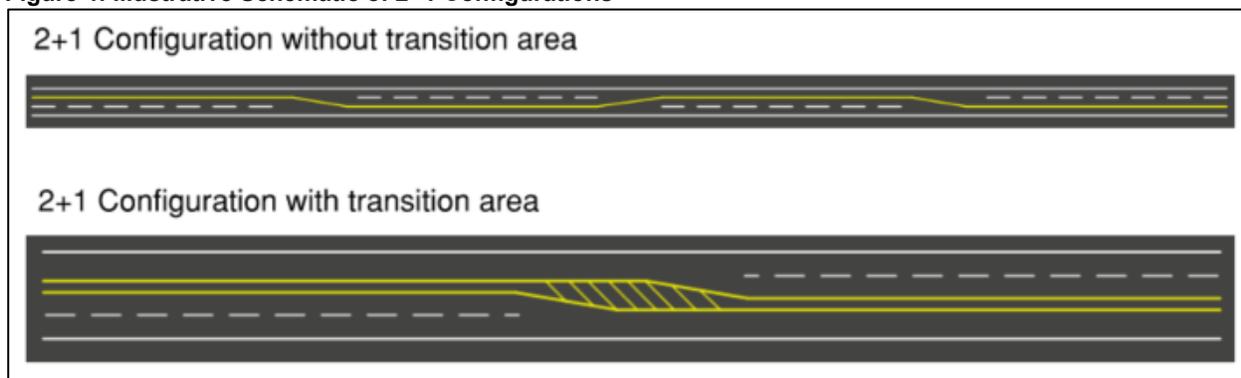

KYTC Statewide Model Forecasts

The KYSTMv19 model results for the base year (2019) and the future year (2045) were examined. The consultant team reviewed land use data, the network model and calculated the percent Root Mean Square Error (%RMSE) for the study area and study corridor. %RMSE is a measure of the accuracy of the traffic assignment, estimating the average error between the observed and modeled traffic volumes on links with traffic counts. A low %RMSE value indicates that the estimated and observed data are close to each other, suggesting a better overall accuracy for the model. Based on the analysis results, it was found that the KYSTM in the project area is sufficiently well-calibrated (See **Appendix C: KYSTM Calibration Review Memorandum**).

The Build model uses a 2+1 configuration. From the Highway Capacity Manual 7th Edition, a 2+1 is a nominally two-lane highway with a three-lane cross section, with the middle lane being a passing lane that periodically alternates direction. It has been found that 2+1 roads improve the free flow speed without increasing roadway capacity. **Figure 4** shows illustrative schematics of 2+1 configurations.

The annual length-weighted average growth rate in the corridor based on the model results was approximately 0.37% for the No-Build and 0.74% for the Build model. The Build model included increasing the free flow speed on US 127 to account for the effects of the new 2+1 lane configuration, using the methodology outlined in the Highway Capacity Manual 7th Edition.

Figure 4: Illustrative Schematic of 2+1 Configurations

Population Growth

Historical census data and population projections for Casey and Lincoln Counties were examined to assess the past and expected future population growth in the area, see **Table 2**. The data was obtained from the University of Louisville State Data Center. The average annual population growth for Casey and Lincoln Counties from 2010 to 2020 was 0.0% and -0.2%, respectively. For the 2020 to 2045 projected time period, annual population growth in Casey and Lincoln Counties is expected to decrease at a rate of -0.3% and -0.4%, respectively.

Table 2: Population Data

Location	Census		Projections				Extrapolation	Annual Growth	
	2010	2020	2025	2030	2035	2040	2045	2010 to 2020	2020 to 2045
Kentucky	4,339,367	4,505,836	4,580,143	4,641,150	4,686,067	4,721,118	4,750,369	0.4%	0.2%
Casey	15,955	15,941	15,764	15,544	15,261	14,960	14,687	0.0%	-0.3%
Lincoln	24,742	24,275	24,041	23,712	23,224	22,615	21,990	-0.2%	-0.4%

Source: University of Louisville Data Center

Selected Growth Rate

Based on the 0.69% annual historical traffic count growth rate, the 0.74% projected Build model growth, and the expectation that the population in Casey and Lincoln Counties is projected to decrease by -0.3% and -0.4%, a 0.75% annual growth rate was selected for the corridor. This is sufficient to explore the potential effects of a continued modest increase in traffic volumes over the forecast horizon.

2023 Traffic Volumes

The 2023 study volumes were estimated using the selected growth rate of 0.75%, 2023 intersection counts and the KYTC Count Station information (**Table 1**).

2023 Segment Volumes (AADT, DHV, and Truck Volumes)

The 2023 segment volume data is presented in **Table 4**. The intersection turning movement counts that were obtained in 2023 were used to develop the segment AADT volumes. A check

was made between the calculated AADT's, and the traffic count stations from 2019 to 2021 (grown at 0.75% to 2023) to determine if the intersection counts would yield reasonable results. The 2023 intersection counts resulted in -10% to +4% difference compared to the count station volumes for all segments except segment H (Jeffries Lane to KY 1194). The AADT at segment H was 26% higher than count station data. This difference could be associated with the location of count station 069505, which could be closer to Jeffries Lane than KY 1194 (KY 1194 has significantly higher TMC volume than Jeffries Lane).

2023 AADTs

The volumes in each segment were calculated by applying a K factor (See **Table 3**) to the highest peak hour volume in each segment. The highest volumes were found to be in the PM peak for each of the eleven segments. **Table 4** summarizes 2023 AADT volumes, rounded to the nearest fifty vehicles per day (vpd). The volumes are also shown in **Figure 5**.

Table 3: Proposed K Factor for Volume Estimation

Segment ID	Begin MP	End MP	Segment	Original K Factor	Proposed K Factor
A	15.50	18.95	Beginning of Project to KY 1552/Short Town Road	10.0	10.0

J	9.02	9.68	Bowens Road to Arcadia View Drive	10,800	1,030	840	80
K	9.68	10.69	Arcadia View Drive to End of Project	11,150	1,060	860	80

AADT rounded to the nearest fifty. AADTT and DHV rounded to the nearest ten. TDHV rounded to the nearest five.

2023 DHVs

DHV values were calculated using the highest peak hour volume in each segment from the turning movement count data and were rounded to the nearest ten vph. Hourly volumes generally increased along the corridor from south to north approaching Junction City (MP: 10.690) in Boyle County.

2023 Truck AADTs and DHVs

Truck percent data was obtained from the KYTC Statewide Traffic Counts Map. This data was used along with the classification counts to estimate Average Annual Daily Truck Traffic (AADTT) and truck DHV volumes for each segment in the corridor in 2023 (AADTT rounded to the nearest ten vpd, truck DHV rounded to nearest five vph). The results are shown in **Table 4** and **Figure 5**.

Truck percentages used in this calculation are presented in **Table 5**. These are percentages of AADT to calculate both daily and peak hour truck volumes.

Table 5: Truck Percentages (Percent of AADT)

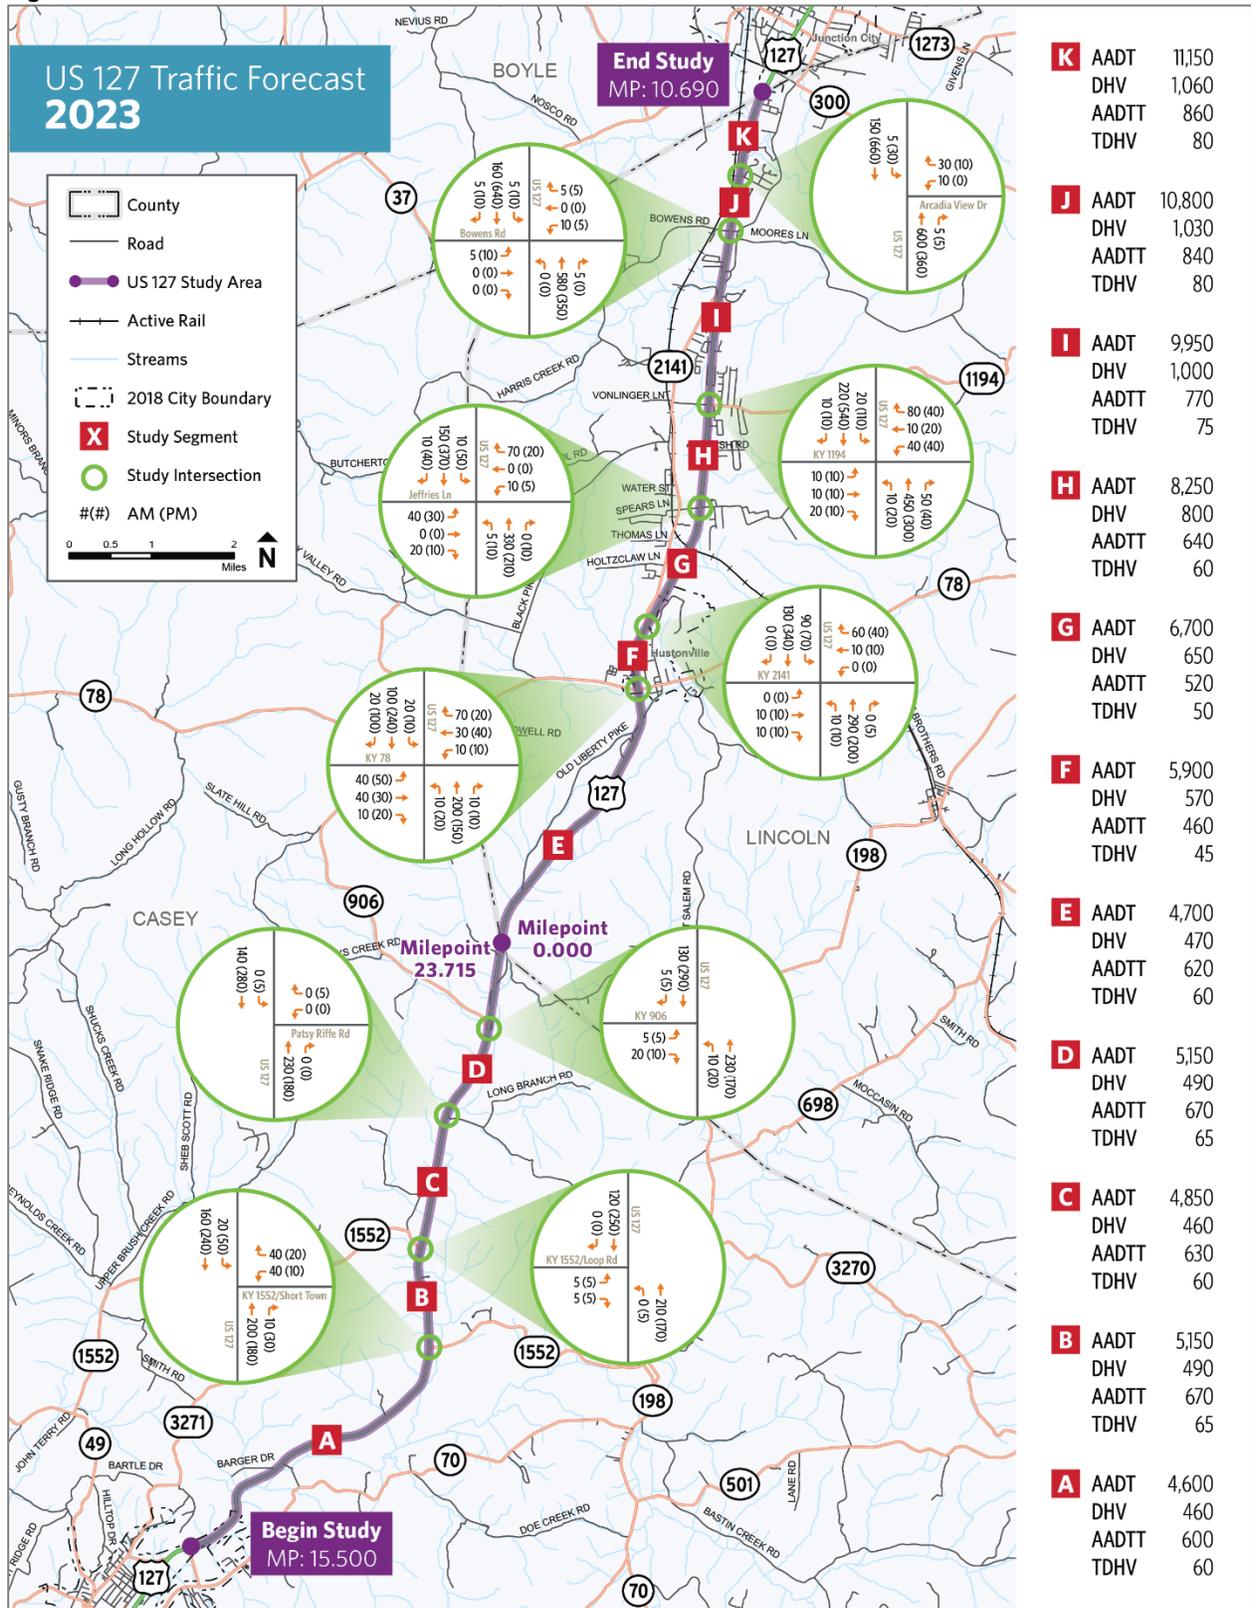

ID	Begin MP (County)	End MP (County)	Segment	% Trucks of AADT			% Trucks of AADT in Peak Hour*		
				Single	Combo	Total	Single	Combo	Total
A to E	15.50 (Casey)/ 0.00 (Lincoln)	23.70(Casey)/ 3.44 (Lincoln)	Beginning of Project to KY 78/Main Street	8.2	4.9	13.1	8.2	4.9	13.1
F to K	3.44 (Lincoln)	10.69 (Lincoln)	KY 78/Main Street to End of Project	5.0	2.8	7.7	5.0	2.8	7.7

**The original percent peak trucks were less than one for most segments, hence, percent total trucks was used.*

2023 Intersection Volumes

The 2023 intersection volumes were derived from the 2023 intersection traffic counts but have been rounded to the nearest ten. For most intersections, the peak hour in the AM occurred between 7:00am and 8:00am and the peak hour in the PM occurred between 4:30pm and 5:30pm. Volumes increased the closer the intersection was located to the northern end of the study area.

Figure 5: 2023 Traffic Volumes

Future (2045) Traffic Volumes

Design Year

AASHTO's *A Policy on Geometric Design of Highways and Streets, 7th Edition (2018)* recommends that the design for new construction or improvements to existing roadways consider future traffic volumes expected to use the facility, with these future traffic volumes typically being at least 20 years into the future. During project scoping, the project team selected 2045 as the design year to use in this study.

Future Growth Rate Considerations

The growth rate for the corridor was based on a review of the historical trends, historical population growth in the corridor, and the KYSTM projections for No-Build and Build models.

2045 Segment Volumes (AADT, DHV, and Truck Volumes)

2045 AADTs

The 2045 AADT volumes were calculated by growing the 2023 values using the 0.75% annual growth rate. The 2045 volumes are shown in **Table 6** and **Figure 6**.

Table 6: Future Year (2045) Traffic Volumes

Segment ID	Begin MP	End MP	Segment	AADT	DHV	AADTT	TDHV
A	15.50	18.95	Begin Project to KY 1552/Short Town Road	5,400	540	710	70
B	18.95	20.10	KY 1552/Short Town Road to Old KY 1552/Loop Road	6,050	580	790	75
C	20.10	21.74	Old KY 1552/Loop Road to Patsy Riffe Road	5,700	540	740	70
D	21.74	22.82	Patsy Riffe Road to KY 906	6,050	580	790	75
E	22.82 (Casey)/ 0.00 (Lincoln)	23.70(Casey)/ 3.44 (Lincoln)	KY 906 to KY 78/Main Street	5,550	550	730	70
F	3.44	4.20	KY 78/Main Street to KY 2141/Danville Pike	6,950	670	540	55
G	4.20	5.74	KY 2141/Danville Pike to Jeffries Lane	7,900	770	610	60
H	5.74	6.94	Jeffries Lane to KY 1194/McCormak Church Road	9,700	940	750	70
I	6.94	9.02	KY 1194/McCormak Church Road to Bowens Road	11,750	1,180	910	90
J	9.02	9.68	Bowens Road to Arcadia View Drive	12,750	1,210	990	95
K	9.68	10.69	Arcadia View Drive to End of Project	13,150	1,250	1,010	95

AADT rounded to the nearest fifty. AADTT and DHV rounded to the nearest ten. TDHV rounded to the nearest five.

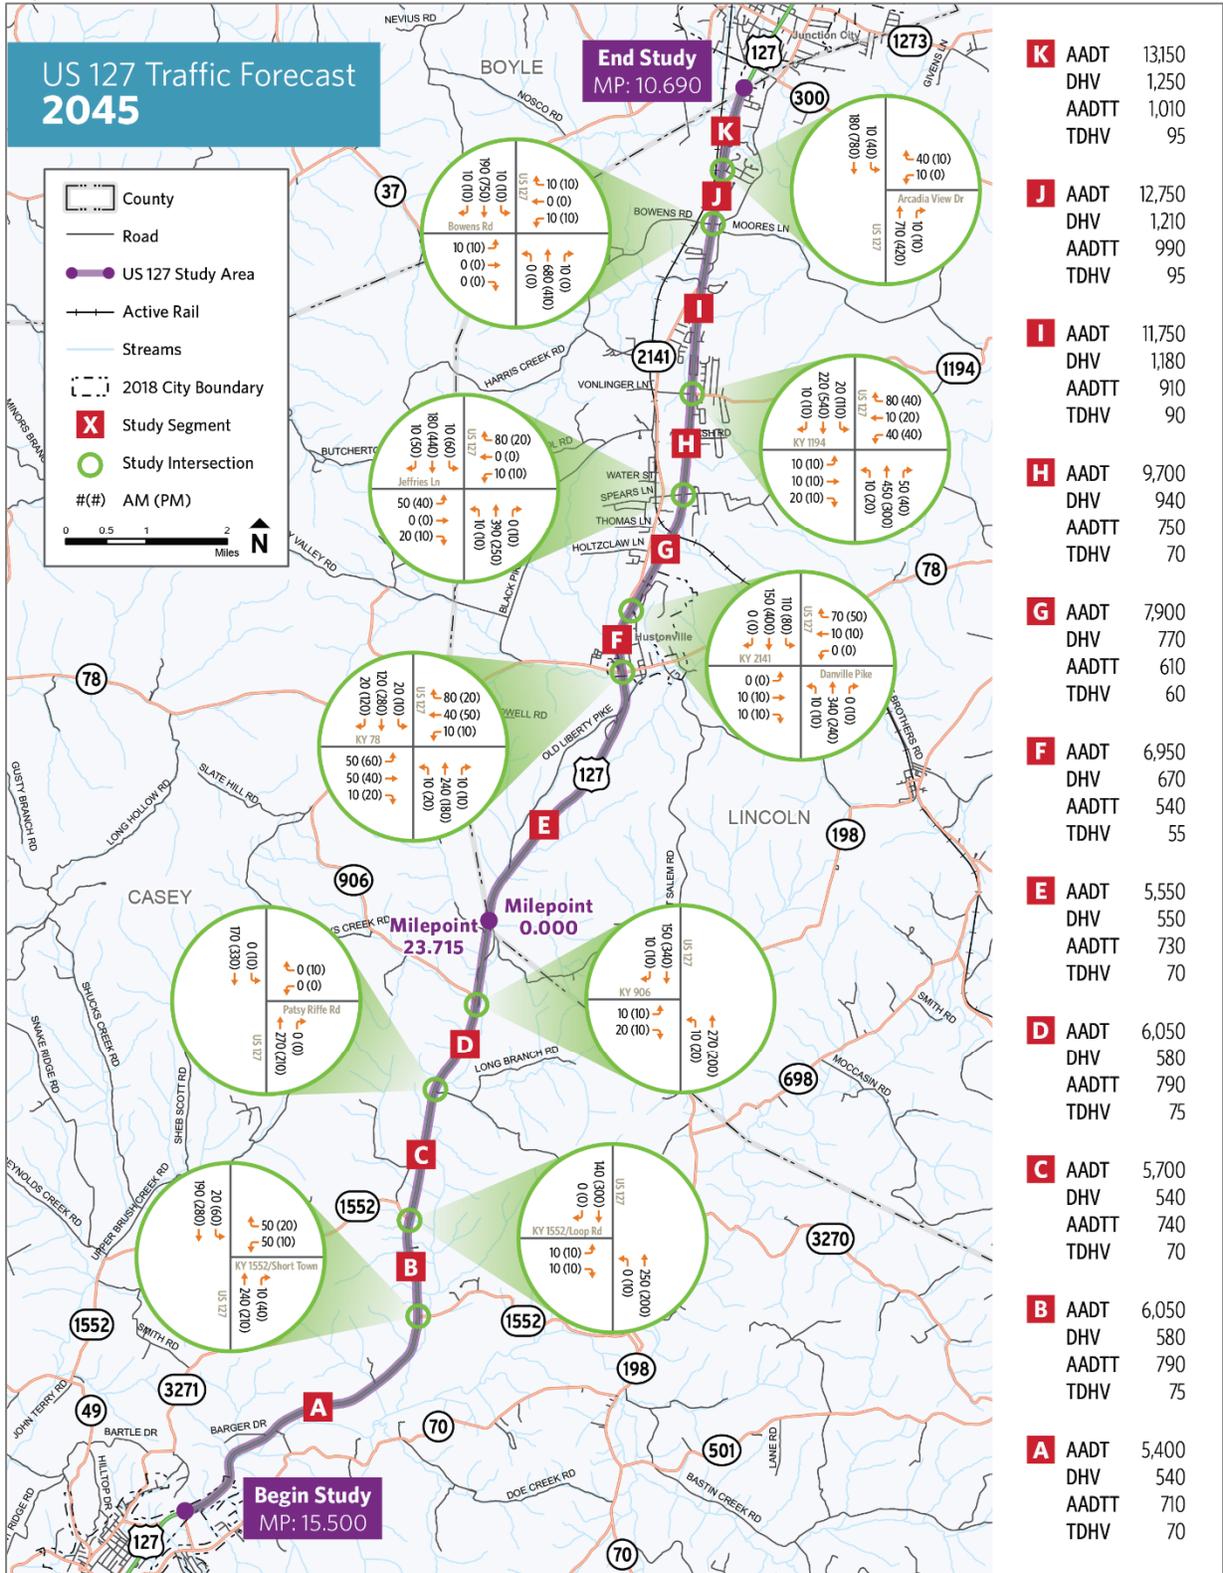

2045 DHVs

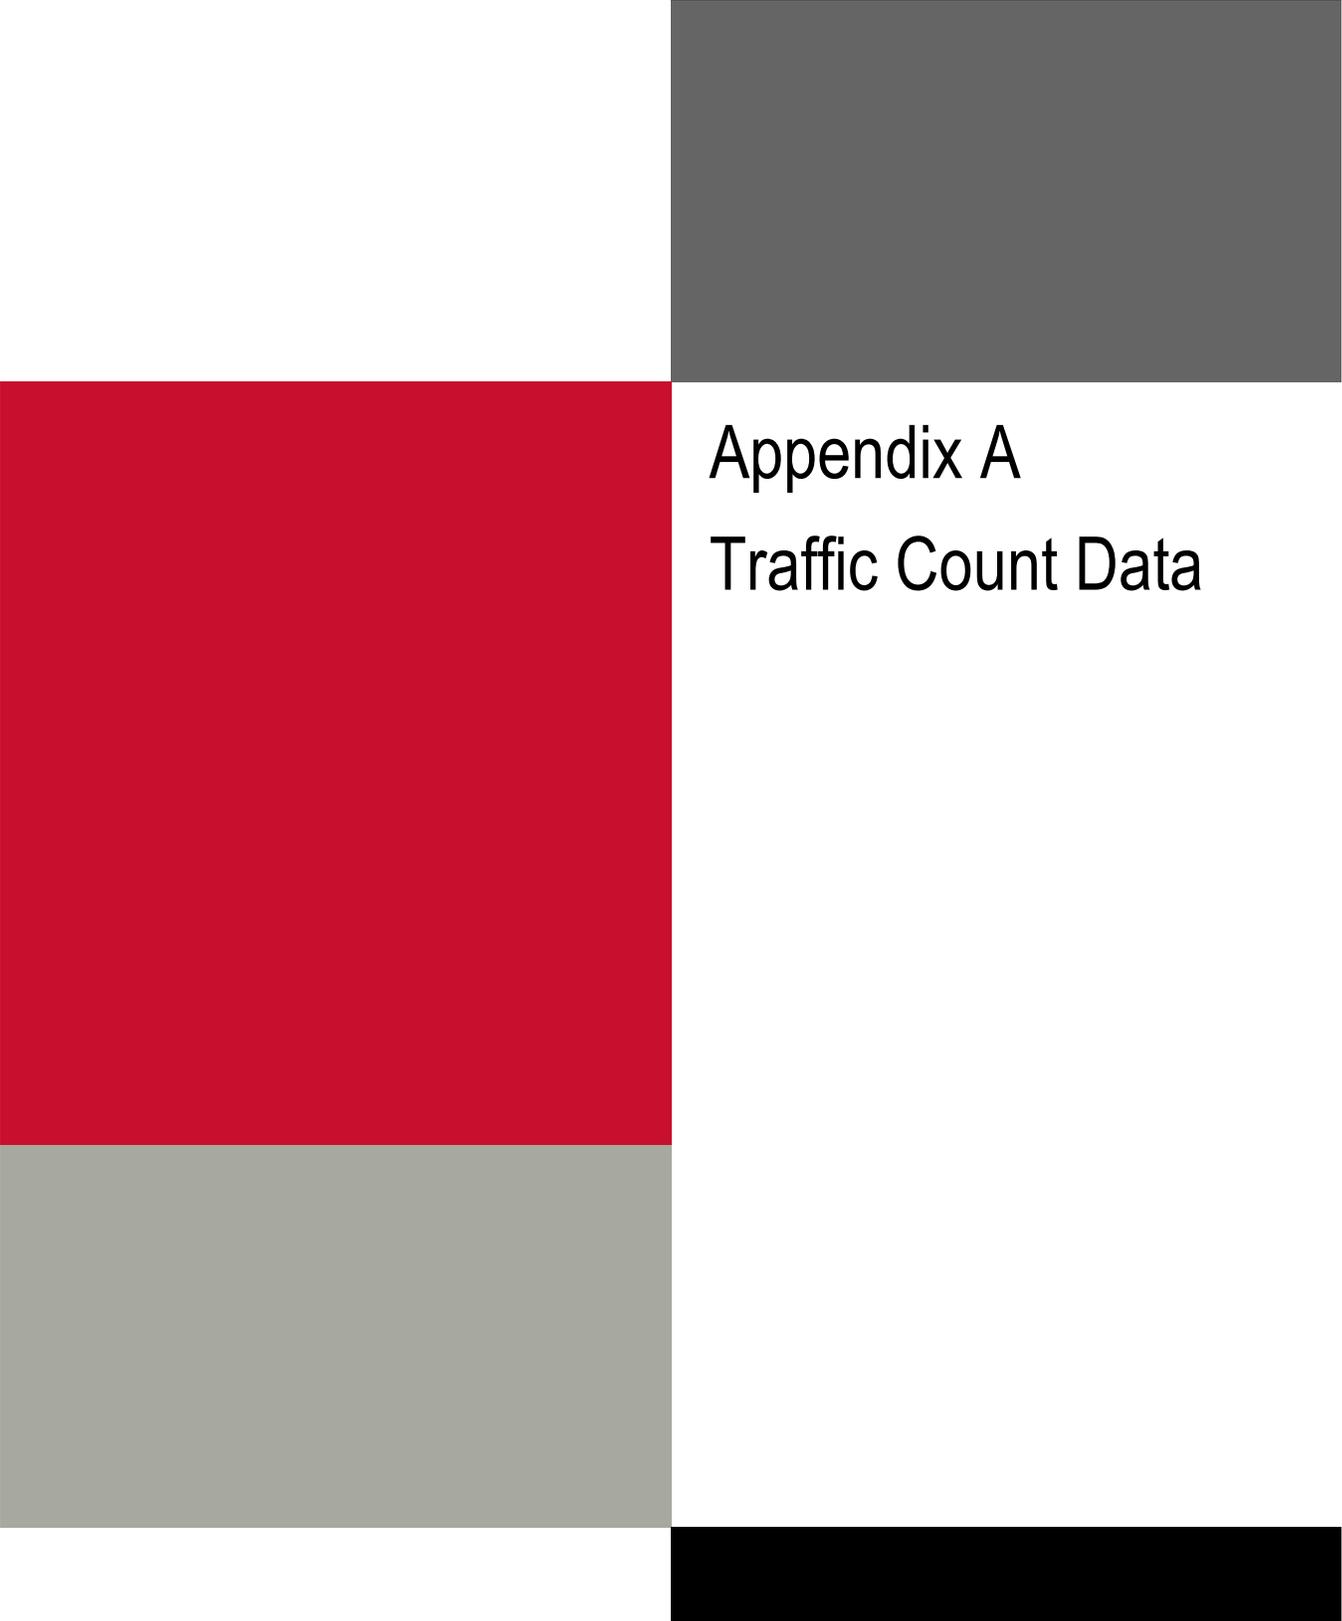

The 2045 DHVs were estimated by applying the K factor (see **Table 3**) to the calculated 2045 AADTs. These results are shown in **Table 6** and **Figure 6**.

2045 Truck AADTs and DHVs

The 2045 truck AADTs and DHVs were grown using the corridor growth rate. The results are shown on **Figure 6**. The same truck percentage was used for 2023 and 2045 to calculate truck volumes. **Table 6** shows truck traffic data (AADTT rounded to the nearest ten vpd, truck DHV rounded to nearest five vph).

KYSTM Calibration Review

US 127 Corridor Planning Study

Casey and Lincoln Counties, Kentucky
March 10, 2023

Introduction

The Kentucky Transportation Cabinet (KYTC) initiated a corridor planning study that will evaluate an approximately 18.9-mile section of the US 127 corridor from MP 15.500 to MP 23.715 in Casey County and from MP 0.000 to MP 10.690 in Lincoln County, Kentucky. US 127 in the study area is located north of Liberty and south of Danville and is classified as a rural other principal arterial. This memorandum discusses the baseline calibration of the Kentucky Statewide Traffic Model (KYSTM) in the project area and whether or not additional calibration efforts are necessary for the project. Specifically, this document presents the preliminary percent Root Mean Square Error (%RMSE) results. The US 127 project area is shown in **Figure 1**.

RMSE

The KYSTM Version 6003 was utilized to estimate the %RMSE. **Table 1** displays the %RMSE by facility type for the 2019 No-Build Model. The %RMSE was calculated for any link with a count station within a one-mile radius of the study corridor. **Figure 2** illustrates the selected links for %RMSE estimation. The study corridor (US 127) has a %RMSE of 20.2%. The selected links for the %RMSE calculation are presented in **Table 2**.

Table 1: %RMSE Results for Base and Calibrated Models

Facility Type	Number of Counts	% RMSE	Validation Target	Meets Target
Other Principal Arterial	10	27.0%	36.7%	Yes
Major collector	12	58.7%	78.3%	Yes
Minor collector	4	44.4%	117.7%	Yes
Local	1	NA	149.5%	NA
Total	27	37.7%	-	
US 127_Study Corridor	6	20.2%	36.7%	Yes

NA: At-least two links are needed to calculate %RMSE for each facility type.

Land Use

Land use data was reviewed and checked for TAZs in the Casey and Lincoln Counties. **Figure 3** and **Figure 4** illustrate the TAZ population and total employment, respectively. It was found that the KYSTM land use information in the study area is sufficiently well calibrated.

Conclusions

Based on the %RMSE analysis it appears that the KYSTM in the project area is sufficiently well calibrated. It is proposed that no further calibration is needed for the project area. If KYTC agrees with this conclusion, then the team will proceed to develop the build model for the project.
