Appendices

- Appendix A: 2017 Turning Movement Forecasts
- Appendix B: 2025 Turning Movement Forecasts
- Appendix C: 2040 Turning Movement Forecasts
- Appendix D: Traffic Data for Pavement Design
- Appendix E: Additional Figures
- Appendix F: Growth Rates

Commonly Used Abbreviations and their Descriptions

%T	Truck Percentage	The ratio of trucks to total traffic volume
ADT	Average Daily Traffic	The average daily traffic at a certain location
ATR	Automatic Traffic Recorder	A permanent and continuous recording traffic count station
D-Factor	Directional Factor	The percentage of traffic flow by direction
DHV	Design Hour Volume	The 30 th highest hourly traffic volume in a year
ESAL	Equivalent Single Axle Load	A measure of traffic volume impact on roadway condition
FC	Functional Class	A numerical code indicating roadway purpose
GR	Growth Rate	A calculated value used to estimate future traffic volumes
K-Factor	K-30 th Hour Factor	DHV divided by ADT (DHV/ADT)
MP	Mile Point	A location description; MPs increase in cardinal direction
PHF	Peak Hour Factor	The highest traffic volume in 15 minutes out of an hour

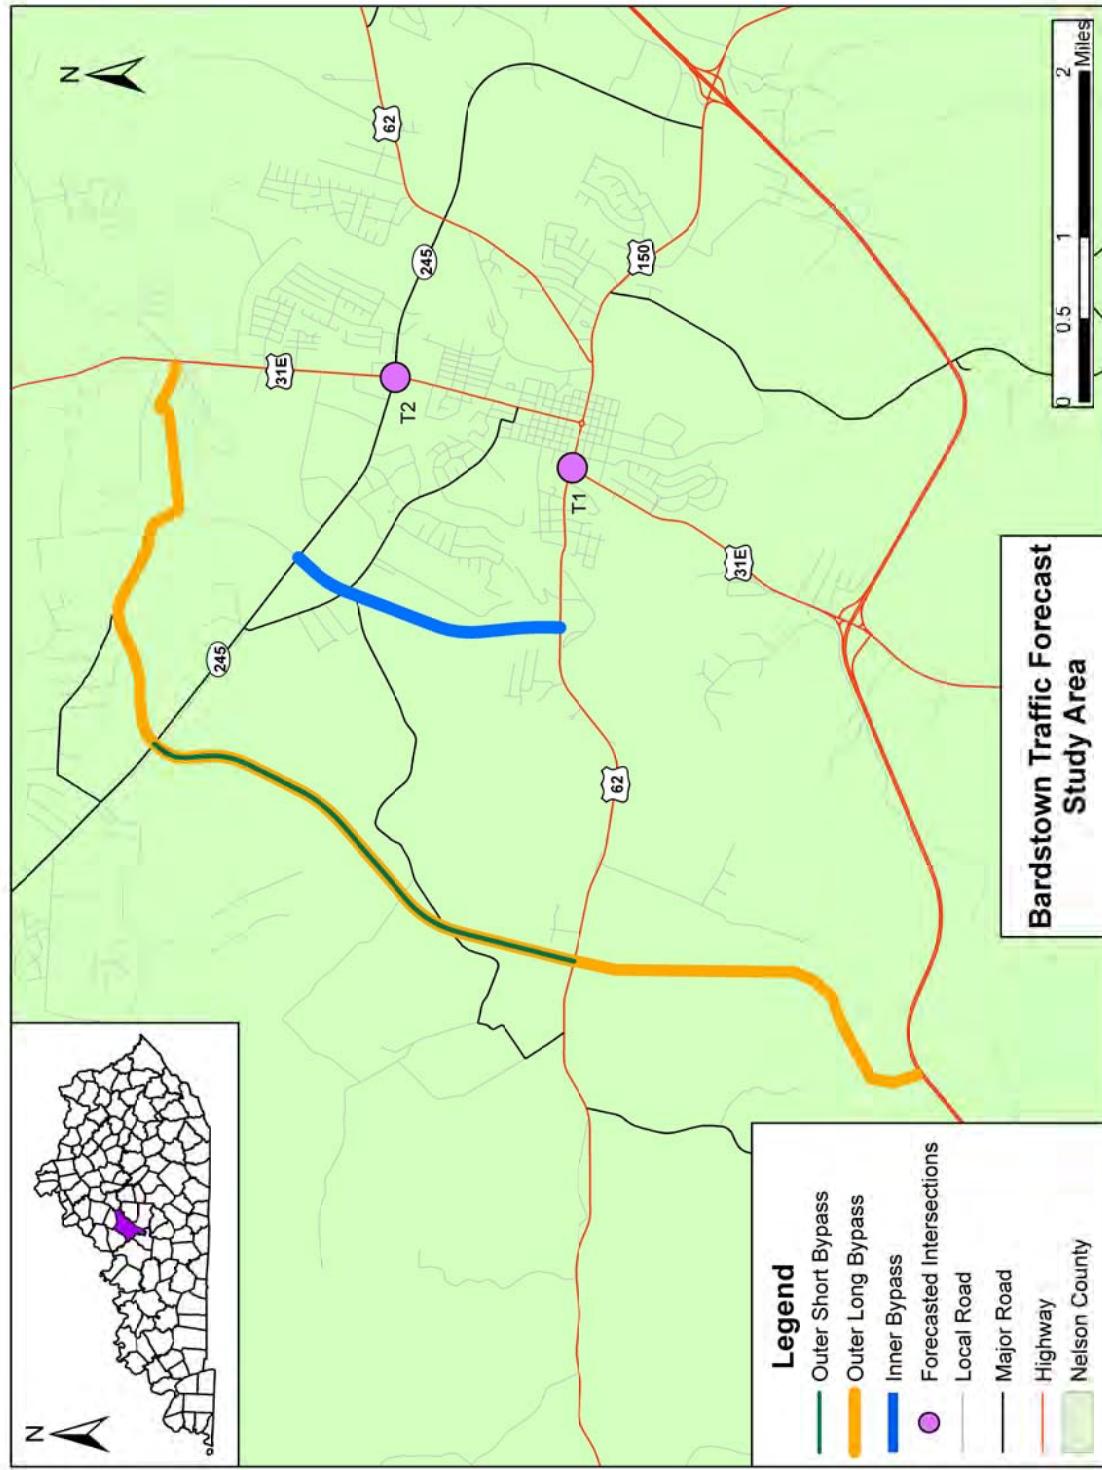

1.0 INTRODUCTION

This document summarizes the steps completed by WSP to prepare a traffic forecast for three alternate bypass options west of Bardstown in Nelson County, Kentucky. The Kentucky Transportation Cabinet (KYTC) District 4 requested this forecast for Item No. 4-8809.00. The three options include an inner bypass between KY 245 and US 62 near Bardstown, a short outer bypass between KY 245 and US 62, and a long outer bypass from US 31E to the Bluegrass Parkway, which includes the short outer bypass and extends the alignment further north and south.

Figure 1 shows a map of the study area.

Three types of forecasts included in this report are Average Daily Traffic (ADT), Design Hourly Volume (DHV), and truck percentages. All three forecast types were completed using the following scenarios: base year 2017, open to traffic year 2025, and future year 2040, for both Build and No-Build conditions.

Figure 1: Study Area

2.0 SEGMENT TRAFFIC VOLUMES

The KYTC collected traffic counts and calculated average daily traffic (ADT) volumes at seven traffic count stations within the study area. All counts were conducted between the years 2014 and 2016. Locations for the count stations, the year of the last traffic count, traffic count station number, and total ADT are listed below:

- US 31E – Beall Ave to Bardstown Bypass (2016): Station A02 = 16,646
- US 31E – US 62W to US 62E (2014): Station A79 = 17,623
- US 31E – KY 245 to KY 332 (2016): Station A99 = 16,134
- US 31E – Martha Collins Bluegrass Pkwy to US 62W (2014): Station B07 = 9,845
- US 62 – Elm Grove St to US 31E (2016): Station A78 = 7,808
- KY 245 – US 31E to KY 1430 (2016): Station A89 = 23,793
- KY 245 – US 62 to US 31E (2015): Station B06 = 28,493

The original counts were updated to a base year of 2017 using a historical traffic growth analysis. Details of that analysis are discussed later in this report.

3.0 INTERSECTION TURNING MOVEMENT VOLUMES

The two intersections included as part of this forecast are identified as US 31E / US 62 (T1) and US 31E / KY 245 (T2).

Turning movement counts were conducted at the two intersections during the AM (7:00 AM – 9:00 AM) and PM (3:00 PM – 5:00 PM) peak periods (Eastern Standard Time). The turning movement counts were then factored to account for seasonal variations.

Intersection turning movement forecasts for 2017 can be found in **Appendix A**. The 2017 No-Build turning movements were forecasted to the open to traffic year 2025 and future year of 2040. No-Build turning movement forecasts for 2025 and 2040 can be found in **Appendices B** and **C**.

4.0 GROWTH RATES

Growth rates were determined based on historical traffic growth analysis, population trends and projections, and results from the Kentucky Statewide Traffic Model (KYSTM).

The growth rates identified for each segment within the study area are shown in **Table 1**. Further discussion regarding the selection of the growth rate can be found in the Traffic Forecast Methodology Report as submitted to the KYTC Division of Planning on June 27, 2017.

Table 1: Proposed Growth Rates

KYTC Count Station	Route	From	To	No-Build Growth Rate	Inner Bypass Growth Rate	Outer Short Bypass Growth Rate	Outer Long Bypass Growth Rate
New Bardstown Bypass	-	-	-	-	2.5%	2.0%	2.0%
A02	US 31E	Beall Ave	Bardstown Bypass	1.0%	0.0%	0.0%	0.0%
A79	US 31E	US 62W	US 62E	1.0%	0.5%	1.0%	1.0%
A99	US 31E	KY 245	KY 332	1.0%	1.5%	0.5%	0.5%
B07	US 31E	Martha Collins Bluegrass Pkwy	US 62W	1.0%	1.5%	1.5%	1.5%
A78	US 62	Elm Grove St	US 31E	1.0%	0.0%	0.0%	0.0%
A89	KY 245	US 31E	KY 1430	0.5%	1.0%	0.5%	0.5%
B06	KY 245	US 62	US 31E	1.0%	1.5%	1.5%	1.5%

Tables 2 through 5 on the following pages detail the forecasted travel volumes for the No-Build and Build scenarios. **Figures 2 through 5** show segment descriptions and provide summaries of key study area segments' forecasted traffic for the No-Build and Build traffic forecasts, respectively.

Table 2: No-Build Traffic Forecast Summary

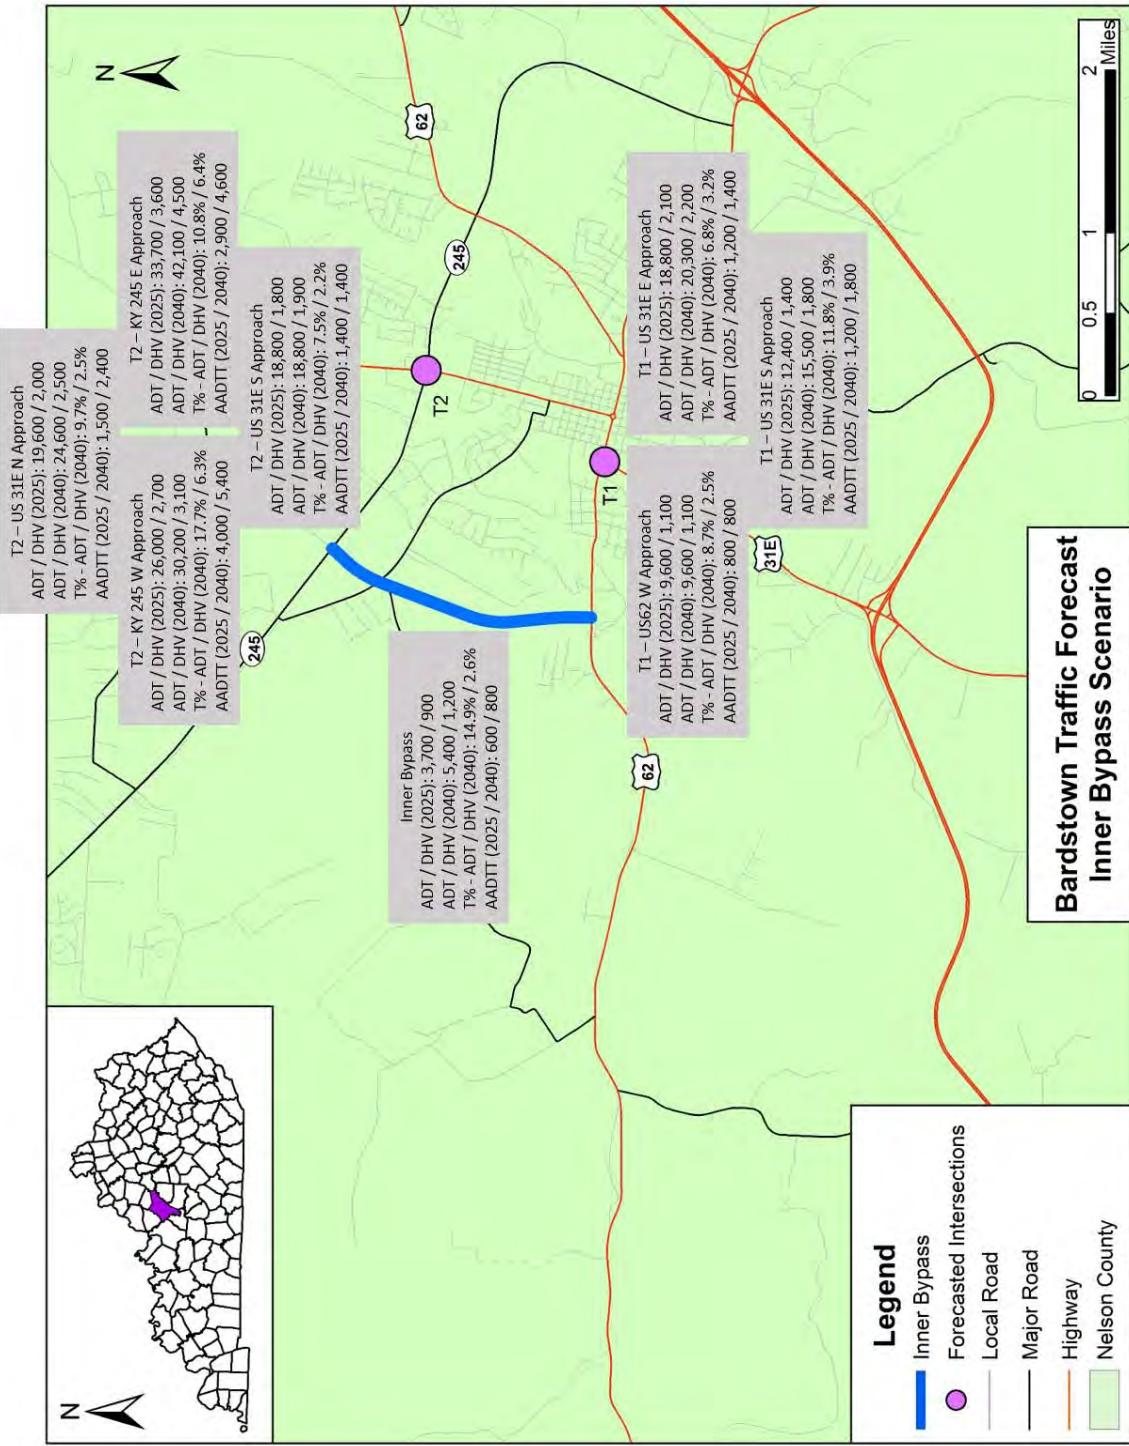

Figure 3: Inner Bypass Forecast Summary

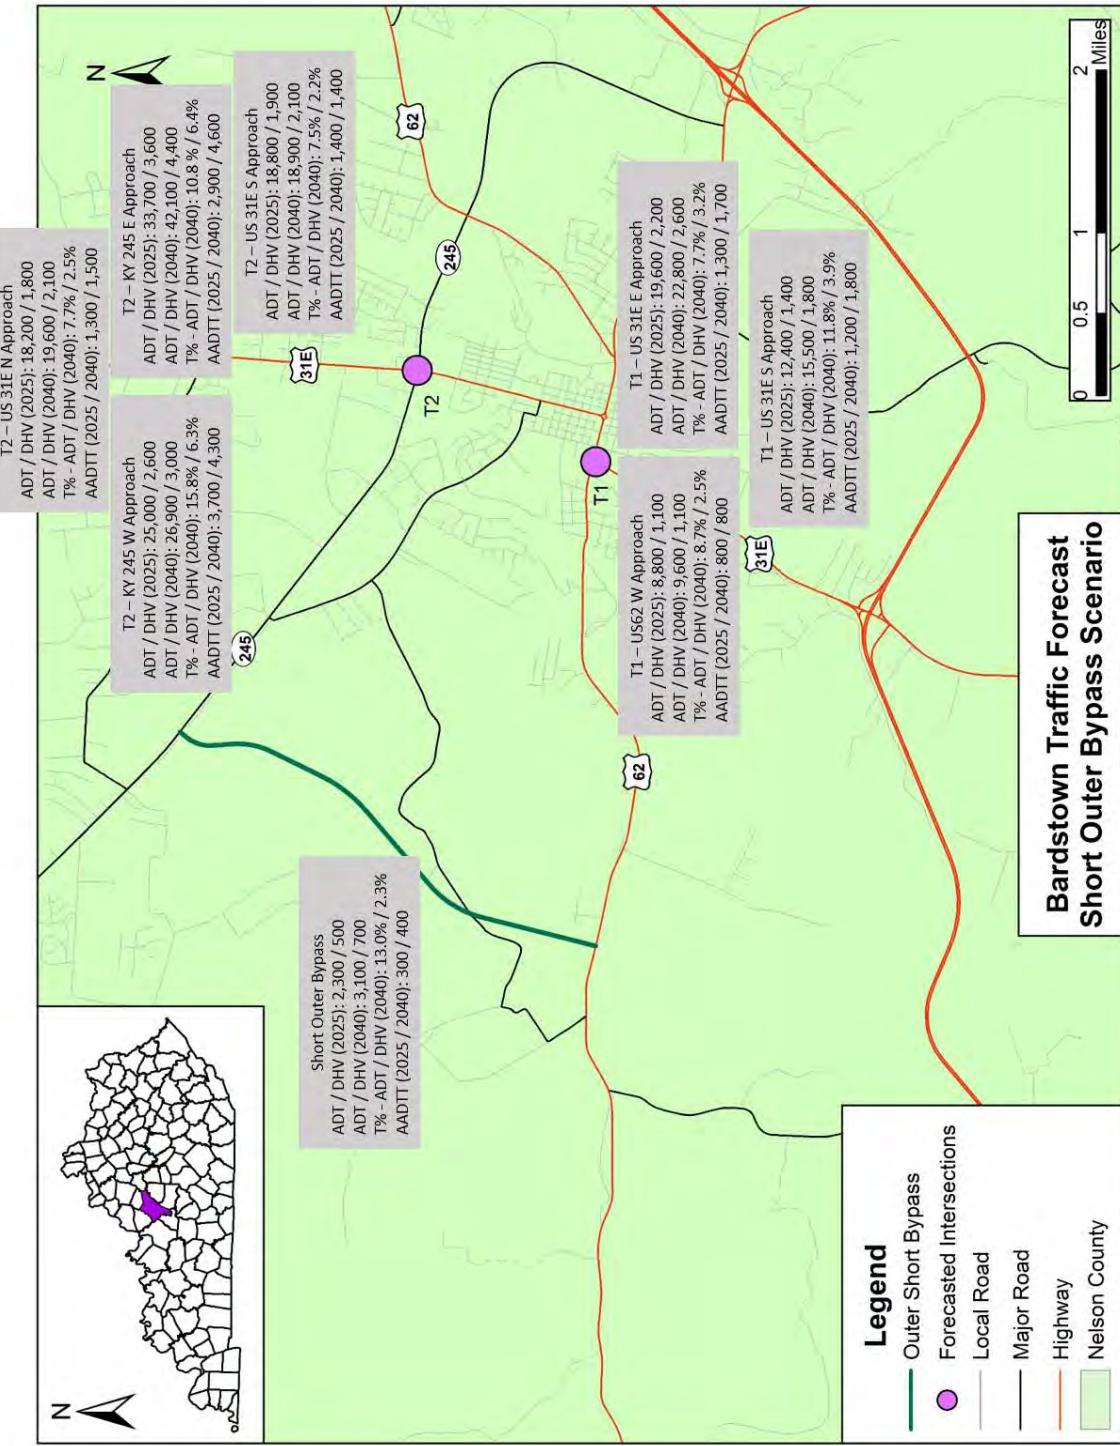

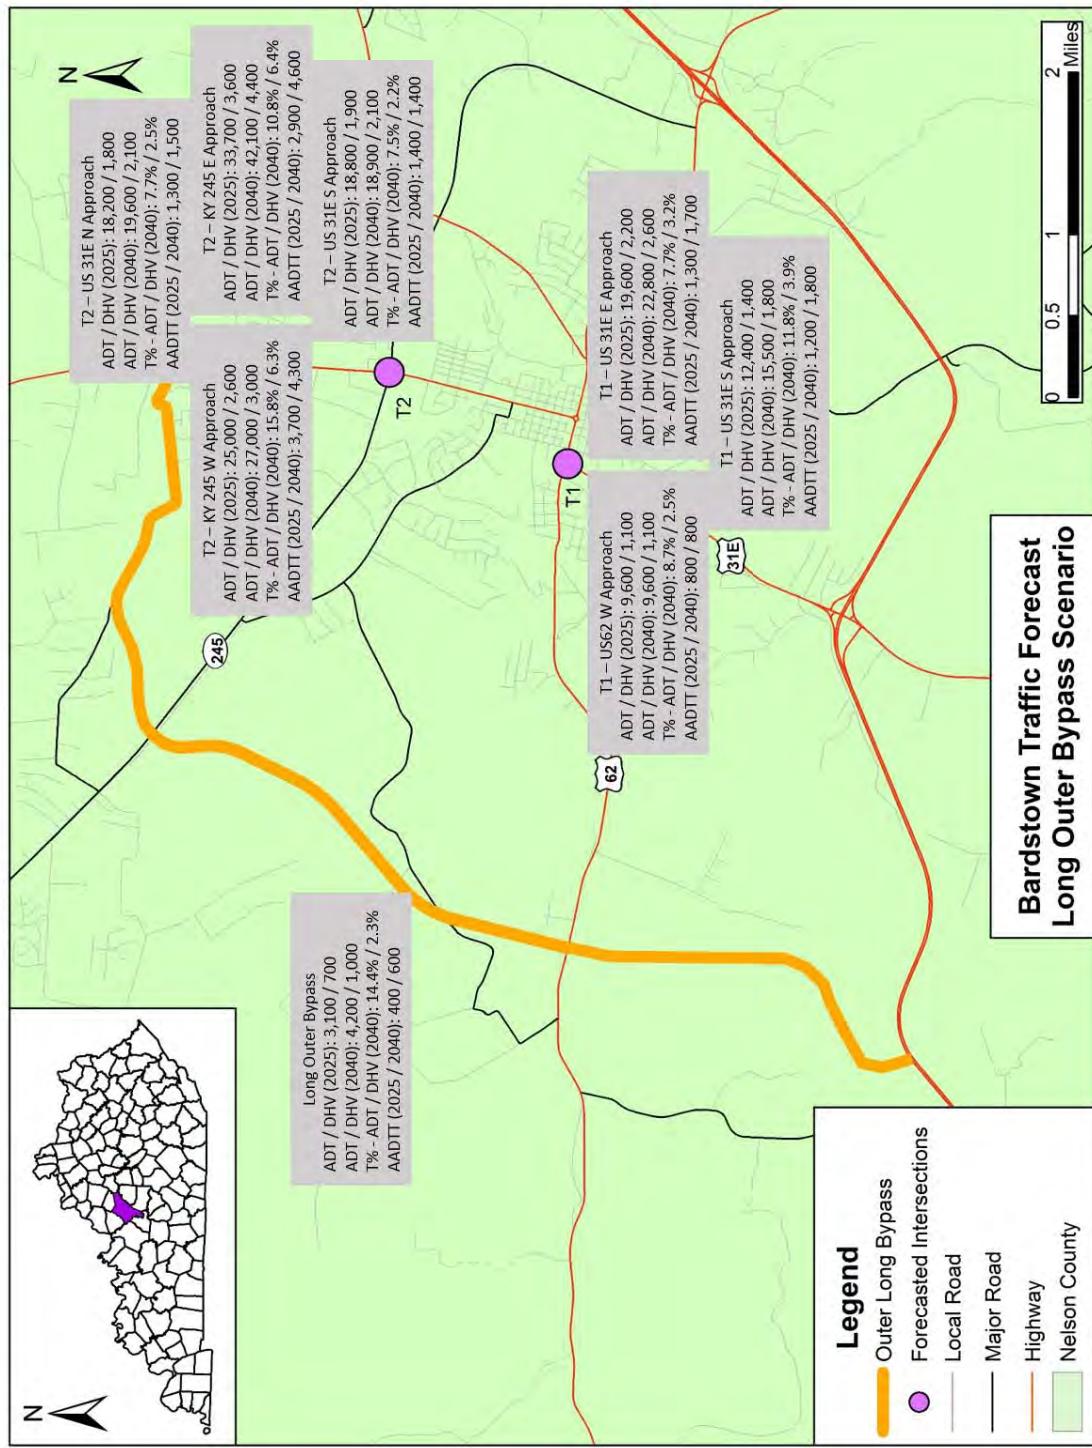

Figure 4: Short Outer Bypass Forecast Summary

Figure 5: Long Outer Bypass Forecast Summary

5.0 K FACTOR

Hourly factors (K factors) were calculated by using the hourly count data from the KYTC count stations. The summary of raw hourly factors is provided in the Traffic Forecast Methodology Report.

The hourly factors were then adjusted by factors provided by KYTC. These factors were derived from Automatic Traffic Recorder (ATR) data by functional classification, day of week, and month of year.

The final K factors were adjusted slightly to account for volume balancing. Final K factors for each segment and ramp are included in **Tables 2** and **3**.

6.0 PHF

Peak hour factors (PHF) were calculated from the turning movement counts. A general analysis of the PHF indicates a range of 0.62 to 0.95.

7.0 TRUCK PERCENTAGES

Vehicle classification data in the study area was obtained from the Statewide Vehicle Classification Database maintained by KYTC, as shown in **Table 6** below, and also from classifications counts performed during the turning movement data collection. The Statewide Vehicle Classification Database was used to derive ADT truck percentages. Classification data from the turning movement counts was used to derive DHV truck percentages.

Table 6: Truck Percentages

Route	Date	Count Station	Direction	Mile Point	Daily Truck %	AADTT
US 31E	2016	A02	Both	15.1	7.5%	1,200
US 31E	2014	A79	Both	14.0	6.1%	1,100
US 31E	2016	A99	Both	16.0	6.9%	1,100
US 31E	2014	B07	Both	13.0	8.4%	800
US 62	2016	A78	Both	14.0	8.7%	700
KY 245	2016	A89	Both	3.7	14.1%	3,400
KY 245	2015	B06	Both	2.9	7.7%	2,200

8.0 POPULATION

Population data was obtained from the Kentucky State Data Center for Nelson County and Kentucky. **Table 7** displays the historical population growth while **Table 8** displays population projections.

Table 7: Historical Population Growth

Area	1980	1990	2000	2010	% Growth (2000-2010)
Kentucky	3,660,777	3,685,296	4,041,769	4,339,367	7.4%
Nelson County	27,584	29,710	37,477	43,437	15.9%

Source: Kentucky State Data Center

Table 8: Population Forecasts

Area	2010	2020	2030	2040	% Growth (2010-2040)
Kentucky	4,339,367	4,672,754	4,951,178	5,162,292	19.0%
Nelson County	43,437	47,473	51,695	54,752	26.0%

Source: Kentucky State Data Center

As shown in **Table 7**, the population of Nelson County increased 15.9% from 2000 to 2010 compared to only 7.4% for Kentucky during the same time period. Similarly, **Table 8** shows the population of Nelson County to be greater than what is expected by the state forecast. Nelson County is expected to increase by 26.0%, at a rate of 0.87% between the years 2010 and 2040, while a growth of 19.0% in Kentucky is expected between 2010 and 2040 at a rate of 0.63% per year.

9.0 OTHER INFORMATION

Additional information has been provided for reference in subsequent appendices. The information includes:

- **Appendix D: Traffic Data for Pavement Design**

Commonly Used Abbreviations and their Descriptions

AADT	Average Annual Daily Traffic	Adjusted for seasonal and monthly factors
AADTT	Average Annual Daily Truck Traffic	Total truck volume for a year/365
DHV	Design Hour Volume	30 th highest hour of a <u>year</u>
ESAL	Equivalent Single Axle Load	A measure of traffic's impact on roadway
%T	Truck Percentage	The percentage of trucks to total volume
FC	Functional Class	Refers to a road's importance
GR	Growth Rate	A value normally compounded annually
PHF	Peak Hour Factor	DHV divided by ADT (DHV/ADT)
K-Factor	K-30 th hour Factor	Considers a 15 minute spike in an hourly count
D-Factor	Directional Factor	Percentage of dominant flow to total
MP	Mile Point	Miles increase easterly and northerly
ATR	Automatic Traffic Recorder	A permanent & continuous recording station
KYSTM	Kentucky Statewide Model	A computerized representation of KY roads
BCI	Bicycle Comfort Index	A Level of Service Concept

Traffic Forecast Executive Summary
Nelson County: Western Bardstown Connectivity Study
Item No. 4-8809

FORECAST SUMMARY

The project calls for the construction of a new connector, west of Bardstown, connecting US 31E near Bluegrass Parkway to the north side of town, in Nelson County. The purpose of this forecast is to analyze the four different connector options and the volume of trucks and other vehicular traffic utilizing those corridors. The four options are:

- Short Inner Connector (Pink Corridor) between US 62 and KY 245
- Long Inner Connector (Orange Corridor) between US 31E near MP 12.3 and US 31E near MP 15.8
- Short Outer Connector (Yellow Corridor) between US 62 and KY 245
- Long Outer Connector (Aqua Corridor) between Bluegrass Pkwy and US 31E near MP 16.7

FORECAST TYPE

The following types of forecasts were developed:

- 2018 and 2040 Average Daily and Design Hourly Truck Percent Forecasts
- 2040 No Build and Build Turning Movements
- 2018 and 2040 ADT and DHV values
- Peak Hour Factors

CURRENT-YEAR VOLUMES

Current year volumes are based upon the most recent volume counts within the study area, the Hardin Meade Model and the intersection and volume counts (see Pg. 3, Pg. 4, and Pg. 5) collected for this project.

The original volume counts were updated to a base year of 2018 using a historical growth rate.

DESIGN-YEAR/GROWTH FACTORS

Growth rates were determined based on historical traffic growth analysis, population trends and projections, and results from Hardin Meade Model.

Traffic Forecast Technical Report
Nelson County: Bardstown Connectivity Study
Item No. 4-8809

The Kentucky State Data Center population projections for Nelson County suggest a 0.75% annual growth in population.

Historical growth rates for each segment within the study area are shown in **Table 1**. The 2040 future year Hardin-Meade TDM was used to calculate the travel pattern changes and volume changes for five different scenarios: No build, Short inner connector, Long inner connector, Short outer connector, Long outer connector. After normalizing the 2040 model volumes for over/under assignment of traffic flow, model growth rates were calculated. A combination of the Hardin-Meade TDM growth rates and historical growth rates were used to determine growth rates on the study area arterials. **Table 1** shows the growth rates for all the different model scenarios.

Truck Percentages

Truck volumes and growth rate for the different alternates were based on the Hardin Meade TDM, the class counts collected at count station (Pg. 3), and breakdown percentages by truck class were calculated using the latest class counts.

Turn Movements

Six turn movements were requested for this project:

1. US 31E @ Bluegrass Parkway East bound
2. US 31E @ Bluegrass Parkway West bound
3. US 31E at US62
4. US 31E at KY 245
5. KY 245 at KY 1430
6. US 31E at KY 332
