2018-09 – Bridge Program General Engineering Consultant

QUESTION: Does this mean that bridge design projects are anticipated to be part of future bulletins? If so, will these be traditional Design-Bid-Build or Design-Build projects? Are there an anticipated number of projects that will be available to the remaining consultant industry either outside the Bridge Program or thru the Program?

ANSWER: There may be bridge projects that are excluded from the bridge program that could be a part of future professional service advertisements. Projects in the bridge program will not be a part of future professional service advertisements but some may be delivered via design build contracting methods providing design firms additional opportunities.

2018-09 – Bridge Program General Engineering Consultant

QUESTION: Since a Utility Manager is required, is it an oversight that Utility Preconstruction Coordination is not one of the prequalification requirements?

ANSWER: The Utility Design prequalification requirements are all new and many firms have yet to have an opportunity to submit for or receive approval of these services. As a result, no utility design qualifications will be required with the initial response to advertisement; however, the selected consultant shall obtain necessary qualifications through the delivery of the program. Please see X. Prequalification Requirements for more information.
