[2024-04 - Statewide Maintenance Design and Repair Services](#)

QUESTION: Will KYTC please clarify the language concerning the possible prequalification areas listed with asterisks / "as needed" in this advertisement? Based on previous advertisements, it is uncertain whether it is necessary to list within this response specific consultants / personnel to satisfy these requirements or if these areas can be addressed by the selected consultant in the future should such services be required.

ANSWER: The Cabinet does not anticipate that these aspects will occur on most of the projects but they will on some of them. The User Division has expressed a preference for firms to provide solutions to those specific areas. This is somewhat atypical to our traditional approach where we advise firms not to prioritize limited page allocations to these services which may be added later or not at all. The focus of the consultant's response should be based on the contract ready proposals for maintenance projects but we would also like to see how firms intend to serve if we have a total bridge replacement and has to handle everything.
