2027-04 - Statewide Roadway Design Services

CLARIFICATION: Subsurface Utility Engineering* has been added under Utility Design* as an optional prequalification. This prequalification is not required with the initial response. If Subsurface Utility Engineering services become necessary during the delivery of a Letter Agreement, the selected Consultant team must obtain the required prequalification before providing those services or bring on a prequalified subconsultant at that time. Please see Section VIII. Prequalification Requirements of the RFP for more information.
