SUBJECT: Revised Pavement Marker System

A handwritten signature in blue ink, appearing to read "RJW", positioned to the right of the "FROM" field.

Attached is the revised Pavement Marker System which was approved by the State Highway Engineer in 2015. Since decisions were still being made about funding for pavement markers, the revised system was not widely distributed at the time. As you are probably aware, the Pavement Marker System establishes the list of roadways where raised pavement markers should be installed and maintained.

In total, approximately 765 miles were added to the Pavement Marker System through this revision. A majority of the additions were facilities that provided continuity along routes that were already on the system. The system is now basically comprised of Interstates, Parkways, other major multi-lane highways (both undivided and divided), and 3-lane or 5-lane facilities with a center two-way left-turn lane (TWLTL). As was the case in the past, any highway that contains a TWLTL shall be eligible for pavement markers whether it is listed on the Pavement Marker System or not. Please note that, with very few exceptions, two-lane facilities are not included on the new Pavement Marker System.

Should anyone have any questions regarding the revised Pavement Marker System, please let us know.

SUBJECT: Revised Raised Pavement Marker System

For many years, funding has not been available for the installation/maintenance of raised pavement markers. As a result, pavement marker contracts were suspended pending the completion of research on behalf of the Kentucky Transportation Center to investigate the effectiveness of these devices. Based on that research, it was determined that Raised Pavement Markers (RPMs) were beneficial as positional guidance devices on higher volume, multi-lane facilities. The RPM System at the time had a mixture of 2-lane and multi-lane highways. After the findings of KTC were published, the Cabinet significantly reduced the mileage of the RPM System through the removal of most 2-lane facilities and, in 2010, the existing RPM System was adopted.

In 2014, the Federal Highway Administration granted approval to the Cabinet to use Highway Safety Improvement (HSIP) funds in an effort to reestablish the use of RPMs across the state. Since the revision of the RPM System in 2010, the potential existed that highways with similar characteristics as those that made up the existing RPM System may have been deleted over the years or never were included as candidates for RPMs. In an effort to alleviate this, and in conjunction with the approval to use HSIP funds to reestablish the use of RPMs, the Cabinet identified additional roads that could be added to the RPM System. Our primary focus was to include RPMs on facilities that met both typical section and volume criteria, but we also wanted to take this opportunity to "clean up" the existing RPM System by filling in gaps and providing RPM continuity across county boundaries.

Attached for your review and approval is the revised Raised Pavement Marker System. In total, approximately 765 miles of roadway were added to the existing RPM System through this revision, which is comprised of roads that were either classified as major multi-lane highways (both undivided and divided), Interstates and Parkways, and 3-lane or 5-lane sections with a Center Left-Turn Lane (CLTL)/Two-Way Left-Turn Lane (TWLTL) facilities. Please note that, while we are requesting the overall RPM System increase 765 miles from the existing RPM System, this revision has significantly less additional mileage than the original RPM System, which was reduced by nearly 3,000 miles after most 2-lane roads were eliminated. Please indicate your approval of the revised Raised Pavement Marker System on the appropriate signature line below. Should you have any questions, please do not hesitate to contact us.
