

KAVIS Production Release 05/28/2026:

One-time Scripts: 9

Instructions: Please clear your internet browser cache after each deployment to ensure you are accessing the latest system updates and to help prevent unexpected issues.

Priority Stories:

1. 24062 - NTA - Motortype change and EV fee collection

Description: This release updates KAVIS to better support electric vehicle (EV) and plug-in hybrid (PHEV) fee processing when a vehicle's motor type is changed while the title is still in application status. Clerks will now receive the appropriate fee updates before adding the application to the shopping cart, and MVL users will receive an alert when a motor type change may require EV or PHEV fees to be charged.

2. 40553- EV/HV NTA - Update Vehicle Type Correction Title Flow

Description: This release enhances KAVIS to support electric vehicle (EV) fee collection during the Update Vehicle Type Correction process. Applicable EV fees will now be automatically calculated and collected during vehicle type corrections, displayed on receipts, and properly reversed if the transaction is reversed, helping ensure accurate fee processing for EV and plug-in hybrid vehicles.

3. 44399- NTA - Repo - Collect Sales Tax

Description: This release updates KAVIS to support sales tax collection during repossession transfers to a new buyer. Clerks can now select the applicable sales tax description, add the title transaction to the shopping cart, and complete checkout with the required title fees and sales tax included.

4. 45247- MVL Reports - Counties Not Remitted Enhancements

Description: This release improves the Counties Not Remitted report in KAVIS to provide a more complete view of outstanding county remittance activity. The report will now include counties and eligible weeks that have not been marked as remitted, even when remittance data has not yet been generated in KAVIS, helping MVL more accurately track counties with unpaid or incomplete remittance activity.

Priority Bugs:

5. 45305- Clerk cannot recall receipt in prod

Description: This release fixes an issue in KAVIS where some clerks were unable to recall certain receipts in production. Receipts can now be retrieved as expected, improving access to completed transaction details when clerks need to review or reprint receipt information.

6. 45353- Adding new customer that already exists in KAVIS gives wrong merge link and causes error

Description: This release fixes an issue in KAVIS where adding a customer who already existed as a driver license–verified customer could result in an incorrect merge process and system error. Users will now be properly directed to the duplicate customer review process, improving customer record management and preventing merge-related errors.

7. 45742- KYELT - SoS title gets wrong error message

Description: This release updates KYELT transfer validation in KAVIS to return a clearer message when a title or registration is not eligible for transfer. Users will now receive the message “Current title and/or registration is not transferable,” helping clarify why the transfer cannot proceed.

8. 44405- Special Tag dropdown is present on Step 1 for vehicle types that cannot have a Special Tag

Description: This release fixes an issue in KAVIS where the Special Tag option was incorrectly displayed for vehicle types that are not eligible for special tags, such as camping and travel trailers. The option will now only appear for applicable vehicle types, helping prevent invalid selections and checkout errors during the title application process.

9. 43249- Reversal of Title Transfer that had Reissue is not Reversing the Reissue

Description: This release fixes an issue in KAVIS where a kept plate was not returned to its previously available status after a Kentucky Transfer with a plate reissue was reversed. When this type of transaction is reversed, the plate record will now be properly updated so the plate can be reissued again when appropriate.
