Inc., 859-273-0557

Other contacts: Phil Logsdon, D7 Environmental Coordinator, 859-246-2355

Becky Barrick, D7 Assistant Environmental Coordinator

Approximate dates: April 24, 2008 and May 27, 2008

Comments (number of people reached, effectiveness of the technique, what you would do differently, etc.): Using a photo inventory provides a "3-D affect" for the plan view display that is routinely used in Public Involvement forums. The public can relate to the ground level shots because the photographs are taken at known topographic features that property owners can identify and relate to. These visualizations were used at 3 different Public Involvement Forums with a total of approximately 15-20 citizens viewing the displays. Using photo quality paper makes for a nice display, but sometimes glare can be distracting for the viewer. Using good quality weight paper will make a very nice and durable display as well.
